Norton F980 Blaze

NORTON SAINT-GOBAIN 3M ARC ABRASIVES INC

High Performance Fiber Discs

- Ceramic abrasive
- ⅞" mounting hole, except 448C06 to 448C08 have ⅝"
- Pkg. qty. 25

Norton F980 Blaze—
Contain a grinding aid to help provide a better finish and longer life on stainless steel and alloyed metals. Heavy fiber backing. For material removal, weld grinding and blending, light deburring, and finishing.

Norton F981 Red Heat—
The coated grain provides faster cutitng, longer life, and a better finish on mild carbon steel, stainless steel, and hard-to-grind alloys.

ARC PREDATOR—Ideal for grinding mild steel and carbon steel. Performance-coated discs are designed for aluminum, soft metals, and alloys. Coating resists loading for high cut rate and performance.

3M 987C—Stand up to robotic weld grinding, and other heavy-duty applications; integrated grinding aid helps extended disc life. Excellent on cobalt and nickel alloys, high-nickel alloy, stainless steel, titanium, and titanium/zirconium substrates.

Flap Disc Specifications

Type 27 Flat

Type 29 Conical

WHY CHOOSE A FLAP DISC?	
Flap Discs can replace both grinding wheels and fiber discs. The same flap disc can be used for applications ranging from stock removal to blending.	
Flap Discs vs. Grinding Wheels	**Flap Discs vs. Fiber Discs**
Faster stock removal	Longer life, reduced abrasive cost
Smoother finish with no gouging	Fewer disc changes for reduced cost
Cooler cutting, less glazing	More consistent finish
Lightweight and easier to control	No back-up pad required
Less vibration for reduced operator fatigue	Easier storage with no curling
Reduced noise	Reduced loading
	Grit is coarser size

FLAP DISC SHAPES	
Type 27 Flat	**Type 29 Conical**
Grind at flatter angles 0° to 15°	Grind at steeper angles 15° to 25°
Used primarily on flat surfaces	Have angled flaps and may be used on both contoured and edge work
Best choice for blending and smooth finishing	Angle provides greater surface contact for stock removal on flat surfaces
	Best choice when speed and stock removal are primary considerations

GRAIN SELECTION	
Abrasive Grain Type	**Application**
Ceramic - High Performance	High cut rate and long life on stainless, aluminum and other hard-to-grind materials
Zirconia Alumina - Heavy Duty	High rate of stock removal and long life in demanding applications
Aluminum Oxide - General Purpose	General purpose metalworking applications

BACKING PLATE MATERIALS

Flap discs are a combination of abrasive flaps adhered to a rigid backing plate. The backing plate provides stability during operation.

Backing Material	Advantages
Fiberglass	High strength and lightweight; helps to absorb vibration
Plastic	Offers some conformability and is trimmable
Aluminum	Rigid support for maximum aggression; recyclable
Composite	Trimmable, non-marking; allows access at hard-to-reach angles
Phenolic	Prevents backing from scratching the workpiece

493Z12

H5950

H5949

General Purpose Flap Discs

DEWALT® SG 40

Coated ceramic abrasive provides long life and fast material removal on ferrous metals. Plastic backing.

NEON™ HIGH DENSITY

Larger flaps improve conformity on uneven or contoured surfaces. Fiberglass backing.

NEON™

Alternating aluminum oxide and zirconia alumina flaps. Good for aluminum, brass, bronze, stainless steel, carbon steel, and titanium. Quick-trim flexible plastic backing plate wears away as the disc grinds.

Blaze® Type 3

Bluefire™ Type 2

Type 2 (TS) and Type 3 (TR) Flap Discs

Mini flap discs offer simultaneous grinding and finishing, to help save you time, labor, and money. High-strength lightweight plastic backing absorbs vibration, while the durable, Y-weight polyester flaps wear away evenly for aggressive cutting and good blending capabilities. For back up pads, see page 2374.

BLAZE®

The Blaze disc can be used on tough materials, such as stainless steel, titanium, and super alloys, and provide up to 200% longer service life. An excellent choice for aerospace, surgical/medical/distilling equipment, food processing/equipment machinery, pressure vessels, and ship containers. A "supersize" grinding aid provides cooler cutting, and a noticeably faster cutting rate.

BLUEFIRE™

The Bluefire discs feature a zirconia alumina abrasive that provides aggressive cutting and up to 30% longer life on mild carbon steel and welds. The semi-open coat also retards loading on aluminum. An excellent choice for farm equipment, propane tanks, civil/construction/military equipment, and plate steel/structural steel.

WEILER NORTON SAINT-GOBAIN

Heavy-Duty Flap Discs

APPROVED VENDOR

Zirconia alumina grain with cloth-backing. Discs provide aggressive cutting and offer up to 40% longer life than standard flap discs.

WEILER BIG CAT HIGH DENSITY

Zirconia alumina abrasive with phenolic backing. Enhanced conformability for curved and irregular surfaces. Contain 40% more flaps.

NORTON BLUEFIRE

Zirconia alumina abrasive. Trimmable flexible blue plastic backing plate wears away with grinding to allow full use of the disc and conforms to uneven surfaces.

WEILER BOBCAT MINI

Zirconium grain with plastic backing. Ideal for tight spaces.

WEILER TIGER PAW

100% zirconia alumina discs are ideal for demanding applications such as edge grinding. Phenolic backing. High density discs contain 40% more flaps.

WEILER TIGER

Wheels feature a high-performance, high-density zirconia alumina abrasive for outstanding grinding, and have 35% to 40% more flaps for longer wear. Available with aluminum, phenolic, or trimmable backing.

Cubitron II
H7327

Redheat®
H5957

3M NORTON SAINT-GOBAIN WEILER ARC ABRASIVES INC

High Performance Flap Discs

3M Cubitron II 967A—Precision ceramic grain for use on carbon and stainless steel. Cloth backing. Type 27 Giant flap discs are thicker and contain more abrasive material, to provide longer wear and longer service life.

Redheat—Ceramic/zirconia alumina abrasive. Trimmable, flexible plastic backing plate wears away as flap disc grinds and is highly conformable.

Saber Tooth—Ceramic/alumina discs with self-sharpening grain. Phenolic backing. For use with heat-sensitive materials, aluminum, stainless steel, inconel, and titanium. High Density disc contains 40% more flaps. Trimmable Back disc has nonmarking composite backing that will not damage work piece.

SG Blaze—Ceramic alumina grain lasts longer when grinding stainless steel, cobalt, chrome, Inconel®, titanium, and other hard-to-grind metals. Trimmable, flexible plastic back plate wears away as flap disc grinds.

Tiger X—Features 3X industry exclusive technology that combines an advanced grain anchoring system, dual flap design, and ceramic/zirconium cloth backing for fast grinding and long life.

ARC PREDATOR—Discs use a proprietary blend ceramic abrasive grain that is ideal for grinding mild and carbon steel. AP flap discs provide increased flap exposure for faster stock removal. Hard Edge flap discs are engineered with a compressed outer diameter for heavier and more aggressive use, similar to Type 29. Performance Coating improves cut and life by reducing loading and heat on soft metal applications.

MERIT we know abrasives — NORTON SAINT-GOBAIN

Flap Wheels with Arbor Hole

For applications with metal, plastic, wood, fiberglass, and rubber. Use with portable drills, bench grinders, and air tools.

Merit—Aluminum oxide abrasive with standard cloth backing.

Merit Grind-O-Flex—High-performance aluminum oxide abrasive with upgraded cloth backing for longer life and higher productivity.

Norton NEON—Premium aluminum oxide abrasive and heavy cotton backing is an economical choice for light and moderately demanding applications.

DEWALT — NORTON SAINT-GOBAIN — MERIT we know abrasives

Mounted Flap Wheels

- ¼-20 threaded shank

Designed for use with die grinders, portable drills, and air tools. The flaps wear away, continually exposing fresh abrasive and providing uniform finish and consistent cutting action. Flap wheels can conform to most shapes. Use for metal fabricating, blending welds, deburring, cleaning, and finishing.

Norton NEON—An economical choice for cutting hard-to-grind materials such as aluminum, brass, stainless steel, carbon steel, and titanium. Coated aluminum oxide abrasive and heavy cotton backing. Shank is integrally mounted into the wheel.

DeWalt—An excellent choice for surface finishing and preparation, and edge blending and chamfering applications on ferrous metals and stainless steel. High-performance aluminum oxide grit and premium cloth backing.

Merit—Shape to fit any desired contour, even a compound radius. Hardened steel mandrel permanently mounted in epoxy core.

Approved Vendor—Premium aluminum oxide grain is specially treated for high performance. Resin over resin for optimum cutting action and wear out pattern. Specially designed cloth backing with synthetic processing for a good combination of flexibility and sturdiness.

Alo Resin Bond Bore Polishers

- As flaps wear, fresh abrasive is constantly exposed
- Finish a range of interior diameter sizes without changing polisher

Self-centering polishers apply equal pressure to full wall of interior diameter. Spring-action design provides fast cleaning, deburring, and polishing of interior diameter of cylinders, deep tubes, and hydraulic fittings. Flaps adjust automatically to interior diameter, polishing the entire surface area with each pass. Equal spacing between packs of abrasive flaps eliminates heat buildup.

Spiral Bands and Expanding Rubber Drums

Fast-cutting spiral bands remove tough material. Achieve close tolerances when finishing curved, contoured, or hard-to-reach areas. Maximum rpm is determined by rpm rating of expanding rubber drum. Use rubber drums to provide backing support for spiral bands. Steel shank enables use of straight shaft and right-angle grinders.

Drum Sanding Kit includes 6 sizes of drums: ½" x ½", ¾" x 1", 1" x 1", 1½" x 1½", 2" x 2½", and 3" x 3", with 1 medium 80 grit and 1 fine 120 grit aluminum oxide abrasive sleeve to fit each drum size.

Sanding Discs and Depressed Center Wheels

An open web of synthetic fibers and abrasive bond with smear-resistant resin help these wheels provide quick cleaning and conditioning without loading; easily clean uneven surfaces and difficult part profiles. Use to remove surface rust and residue, corrosion, light weld splatter, dirt, mill scale, paint, and epoxy. Prepare surfaces prior to welding or coating application. Clean and condition after welding.

Rapid Prep disc can be used in place of, or in sequence with fiber and flap discs to clean, polish, and finish. Rapid Blend discs and wheels have fine grain particles for cleaning, polishing, and final finishing. Rapid Strip discs and wheels have a coarse abrasive for quick cleaning. Blaze Rapid Strip wheels can strip coatings and finish with the same disc.

Grinding and Cut-Off Wheels Reference Guide

TYPE 1	TYPE 27
Straight wheels designed for cut-off applications	Essentially straight wheels that have a “depressed center/raised hub”. Different types of fiberglass reinforcement mesh give the product stability for use on the periphery, on the face, or a combination of the two.

WHEEL TYPE	THICKNESS	APPLICATION	90° Angle	15° to 30° Angle	15° Angle
TYPE 1	0.035", 0.040", 0.045", 1/16"	Where fast cutting and low kerf loss are desired	X		
	0.125"	For tough cutting and notching applications where stability is important	X		
TYPE 27	0.40", 0.45" 1/16"	Cutting only, where fast cutting and low kerf loss are desired	X		
	0.90", 0.125", 3/32"	For tough cutting and notching applications where stability is important; cutting and cleaning burr-free narrow root pass welds	X		
	1/8"	For multiple applications ranging from cutting-off and notching to light-duty side grinding	X	X	
	1/4"	For heavy-duty to light grinding on the bottom/face of the wheel		X	

GENERAL PURPOSE - SILICON CARBIDE

DEWALT
C24R - Silicon carbide grain for long wheel life. For concrete, cast iron, ductile iron, and other masonry materials.
C60T - Premium silicon carbide for aggressive cutting action. Heavy duty for concrete and other masonry materials. Fast burr-free cutting.

NORTON
Norton Masonry/Masonry RightCut - Silicon carbide for masonry applications.

HEAVY-DUTY - ZIRCONIA

DEWALT
Extended Performance Z24R - Premium tough zirconia grain for extended life and material removal. Heavy duty for ferrous metals and stainless steel.
Extended Performance Z60T - Specially treated grain combination for aggressive cutting action. Extended performance, fast, burr-free cutting in all types of ferrous metals and stainless steel.

NORTON
BlueFire - Mix of zirconia and premium aluminum oxide grain. For use with stainless steel, carbon steel, alloys, and gray iron.
BlueFire Fast Cut/INOX - Contains <.1% iron, sulfur, or chlorine for contaminant free grinding.
BlueFire Foundry/Foundry HD - Zirconia alumina/silicon carbide abrasive blend and an exceptionally strong reinforcement structure. Ideal choice for aggressive, foundry applications.
BlueFire Right Cut - Longer life and faster cut rate. Less pressure required for first cut. For cutting only.

UNITED ABRASIVES – SAIT
The Ultimate Combo™ Z-tech™ - High performance, tough zirconium grain, Cutting, notching, deburring, and light grinding for the toughest applications. For use with stainless steel and ferrous metals.
Z-Tech™ - Special zirconium grain formula. Fast, non-binding cutting. For use with ferrous metals, stainless steel, and high tensile alloys.

HIGH PERFORMANCE - CERAMIC AND CERAMIC BLEND

3M
Cubitron™II - 3M precision shaped grain for ultra fast cut and long life. Cuts with less pressure. Specially formulated for stainless and mild steel.
High Performance - A blend of 3M precision shaped ceramic grain and conventional abrasive provides fast cut and long life. Specially formulated for stainless and mild steel.
Silver - 3M precision shaped grain cuts extremely quickly through stainless steel and carbon steel pipes, tube, flat sheets, and more.

NORTON
NorZon Plus - Combination of Norton SG ceramic alumina and Norzon zirconia alumina with advanced bond system. Lowest total grinding cost; highest productivity. Offer the best option when the best combination of life, cut rate, and lowest heat generation is a primary concern.
NorZon Plus Foundry - Designed to withstand the most aggressive foundry applications.
NorZon Plus Long Life - Best option when longest possible life is primary concern, rough grinding conditions require wheel durability, using high cycle, high horsepower grinders and low labor cost are key.
NorZon Plus RightCut - Noticeably longer life and faster cut rate. Less pressure required. For cutting only.

UNITED ABRASIVES – SAIT
Saitech Ultimate Performance™ - High performance, ceramic aluminum oxide grain, Very uniform, high density grain structure is extremely durable and self sharpening for long life and cooler cut, Combines fast cutting with extremely long life for tough cutting applications. For ferrous metals and stainless steel. Ideal for foundry applications (gates, risers).
Saitech™ - High performance, ceramic aluminum oxide grain. Extremely fast stock removal on hard metals with minimal pressure.

GENERAL PURPOSE - ALUMINUM OXIDE

DEWALT
A24R - Aluminum oxide grain for long life and high material removal. Heavy duty for ferrous metals.
A30N- Aluminum oxide grain combination for long wheel life. Fast material removal without loading. For use with aluminum and other non-ferrous materials.
A30S - Aluminum oxide grain for long life and high material removal. Free of iron, sulfur, and chlorine for contaminant free grinding and cutting. Ideal for use in nuclear and food applications.
A36T - Heavy duty cutting in all types of ferrous metal and stainless steel. Fast aggressive cutting in tough applications.
A60S - Proprietary aluminum oxide grain combination for aggressive cutting action. Free of iron, sulfur, and chlorine for contaminant free cutting. Used for cutting stainless steel and other high strength alloys. Ideal in nuclear and food applications.
A60T - Heavy duty cutting in all types of ferrous metal and stainless steel. Clean smooth cutting and long wheel life.
Metal AO - Softer formulation for fast cutting. Quickly cuts rebar, pipe, sheet metal, structural steel and stainless steel.
Mini Hub HP™ - Allows for more cuts per wheel vs. starndard hub design. Fast tool-free wheel changes. Use for a wide range of metal cutting applications.

NORTON
Gemini - Good choice for steel and ferrous metals as well as specialty applications in aluminum and foundries. Quality aluminum oxide provides consistent performance.
Gemini 1-2-3 - For cutting, notching, and grinding.
Gemini Aluminum - Grind aluminum and softer metals without loading. Contains no wax or rubber fillers.
Gemini Fast Cut - Fastest cutting option when speed of completion is the primary concern.
Gemini Flexible - Unique formulation for better blending, finishing and polishing of stainless steel, structural steel, cast iron welds and burrs. Meets nuclear industry standards.
Gemini Free Cut - Use a more flexible binder than the Long Life wheel, for faster cutting on low-horsepower machines.
Gemini Long Life - Longest lasting when the longest possible wheel life is the primary concern.
Gemini RightCut - Precise cutting; more stability and a narrower pass. Requires less pressure, providing increased operator comfort.
Gemini RightCut Aluminum - Specially formulated for aluminum applications.
Gemini Stainless Steel - For contaminant free grinding.
Gemini XXL/XXL Pipefitter - Best on hard grade carbon steel applications, weld repairs, flashing, and any job that requires quick turn around.
Norton Metal/Metal RightCut - Aluminum for steel/ferrous metal applications.

UNITED ABRASIVES – SAIT
A24N - Fast grinding, aluminum oxide grain, soft bond for fast stock removal. For ferrous metals and low grade stainless steel.
A24R - Long life, aluminum oxide grain, general purpose. For ferrous metals.
A24T - Aluminum oxide grain, hard bond designed for edge and bevel grinding and other applications where a harder wheel is preferred. Longer life for fewer wheel changes. For ferrous metals.
A36T - Fast cutting, aluminum oxide grain. Hard bond for aggressive cutting on rough applications. For ferrous metals and stainless steel.
A46N - Aluminum oxide grain, soft bond for aggressive cutting without loading. For use with nonferrous metals and aluminum.
A60S - Special aluminum oxide grain, hard bond for extremely long life. Fast, burr-free cutting for ferrous metals.
A60T - Aluminum oxide grain, hard bond for smooth cutting. Burr-free cutting for ferrous metals and stainless steel. For use in nuclear, aerospace, automotive, foundry industries, and plant maintenance.
Challenger 3™ - Semi-Flexible, grind and blend welds in one step. Open pattern on wheel for cool grinding and blending. For metals, stainless steel, and aluminum. Contaminant Free - Safe for use in the nuclear industry.
SAIT.M.X.™ - Special bond for cutting sheet metal and other thin gauge metals. Fast, burr-free cutting for stainless steel.
The Ultimate Combo™ A60S - General purpose, aluminum oxide grain. Provides consistent performance with long life for cutting, notching, deburring, and light grinding. For use with ferrous metals.
The Ultimate Cut™ - Cutting a wide range of stainless thin and thick gauge, flat stock, bar stock, square tubing, etc. Exceptional cutting performance on metal and aluminum.
XA24Q - Contaminant free. Specially formulated for nuclear and food processing plants. Free of iron, chlorine and sulfur compounds (Fe + Cl + S <0.1%). For use with stainless steel and other high tensile alloys and ferrous metals.
XA46R - Contaminant free. Specially formulated for nuclear and food processing plants. Free of iron, chlorine and sulfur compounds (Fe + Cl + S < 0.1%). For use with stainless steel and other high tensile alloys.

NORTON SAINT-GOBAIN

Type 1 Toolroom Cut-Off Wheels

Designed for use on fixed machinery and preengineered for maximum versatility in toolroom cutting applications. Excellent for cutting off drill bits, steel bars, and tubing; salvaging tools; and slotting workpieces.

NOTE: Refer to Reference Guide for more detailed information on wheel types.

Cut-Off Wheel Adapters

Use with cut-off wheels listed on this page and page 723, 2384 and wire brushes on pages 2394 and 2395.

Note: Operate according to ANSI and OSHA guidelines and do not exceed maximum rpm noted on wheel being used.

Screw-Type Wheel Mandrel Adapters—Machined from stressproof steel. Screw head is slotted for fast, easy change. Plated finish. 1F540 comes with screws to mount either ¼" or ⅜" holes.

Nut-Type Wheel Arbor Adapters—Use to mount all types of wheels (cut-offs, cloth buffs, wire wheels, etc.). Include arbor, hex nut, and a pair of machined steel washers. Plated finish.

Screw-Type

Nut-Type

XL-WL Deburring Wheel

Multi-Finishing Wheel

Cut-and-Polish Wheel

3M Scotch-Brite™

MERIT abrasives

Deburring/Finishing Wheels

XL-WL Deburring Wheels—Long-lasting Scotch-Brite™ wheels clean and deburr metal surfaces and threads while eliminating the danger of loose, flying wires. Wheels polish and finish metals or composites. Fit standard motor shaft sizes (½" to 1").

Multi-Finishing Wheels—Produce uniform grain finishes on stainless steel and other metals.

Cut-and-Polish Wheel—Heavy-duty wheel for aggressive blending and finishing. Accessories (available separately) allow fit to standard motor shaft sizes (½" to 1").

Deburring and Finishing Wheels—Non-woven spindle-mounted disc wheels are excellent for deburring, blending, and finishing. Conformable construction leaves a smooth, polished finish, even on oddly shaped pieces and surfaces. ¼" steel mandrel.

3M Scotch-Brite™

Unitized Wheels

- ¼" arbor hole mounting
- Medium grade
- Precision-shaped ceramic grain abrasive

Ceramic grain wheels can be used for deburring and finishing in both OEM and maintenance applications. The long-wearing grain extends wheel life and produces minimal dust and debris, to reduce wear and wheel loading, and help improve efficiency.

Toolroom Grinding, Truing & Dressing

Don't see what you need online? Call **1-800-GRAINGER (472-4643)** for sourcing.

Vitrified Toolroom Wheels And Segments—Made from precision-engineered ceramic alumina, aluminum oxide, and silicon carbide materials, Norton toolroom wheels can be used in most ferrous and nonferrous MRO, small-job shop, and production operations. An excellent choice for surface grinding, tool and cutter grinding, and resharpening applications.

To see our full selection, go to **grainger.com/precisiongrinding**.

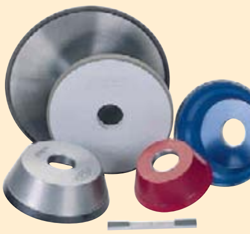
Truing Tool

Dressing Tool

Diamond and CBN Toolroom Grinding Wheels—Engineered to tackle your most-challenging applications, from grinding hardened steels and superalloys, to finishing materials such as glass, ceramics, and tough composites. They meet the stringent requirements of CNC cutting tool manufacturing and resharpening applications, including fluting, end fluting, gashing, and OD relief. Choose from a wide variety of forms, sizes, grades, and materials to fit your machines and meet your specific job requirements.

To see our full selection, go to **grainger.com/diamondcbngrinding**.



Rough Portable Wheels, Cones, and Plugs

Designed for consistent, quality grinding performance in foundries, welding shops, fabrication facilities, steel mills, and shipyards. Typical uses include smoothing weld seams, cleaning castings, and preparing surfaces for plating or painting. Straight wheels, cones, and plugs are designed for use on horizontal/straight shaft grinders. Flaring cup wheels are designed for use on right angle portable cup grinders.

WHEEL SPECIFICATION	
ABRASIVE	**APPLICATION**
57A - Aluminum oxide	Good performance on steel, steel alloys, and iron
57AC - Aluminum oxide/Silicon carbide blend	Good performance on dirty, scale-covered steel parts
AZ - Zirconia alumina/Aluminum oxide blend	Better performance on steel, steel alloys, and iron
NZ - Zirconia alumina	Best performance on steel, steel alloys, and iron
37C - Silicon carbide	For masonry and nonsteel
BLUEFIRE - Ceramic/Zirconia	For steel, iron, and graphite foundry snagging jobs

NORTON SAINT-GOBAIN

Abrasive Sharpening Files and Stones

Crystolon—Fast-cutting silicon carbide abrasive.

Diamond—Diamond abrasive is nickel-bonded to solid steel.

Hard Arkansas—Natural novaculite abrasive produces a fine edge and polished finish.

India—Smooth-cutting aluminum oxide abrasive.

The Operational Advantages of Power Brushes

THEY DON'T REMOVE BASE MATERIAL

The impact action of the wire tips of a rotating brush behave in the same manner as the media in a blasting operation and they have the same ability to separate surface contaminants without damaging the substrate.

Its compliant nature makes it an excellent choice for removing burrs and blending sharp edges without changing overall part dimensions after sawing, cutting, grinding, and machining operations.

NON-LOADING

Unlike bonded, coated, and non-woven abrasive products, power brushes will not load when used on softer materials or when removing paint or similar coatings from a harder surface. Because a power brush consists of a collection of individual wire filaments, there is no place for debris to accumulate and prevent the sharp wire tips from striking the work.

SELF-SHARPENING

As a power brush is used, the wire tips will naturally tend to wear to a point due to contact with the working surface. It is possible to take advantage of this self-sharpening action by periodically switching the mounting position of wheel brushes to maintain their speed and effectiveness.

Crimped Wire Cup Brush

Twist Wire Wheel Brush

Knotted Wire Cup Brush

Stringer Bead Twist Wheel Brush

WEILER

Arbor-Mount Grinder Wire Brushes

All brushes are made with high-tensile, heat-treated carbon steel wire, except where otherwise specified.

Crimped Wire Cup—Greater brushing flexibility for larger, flat surfaces and relatively fine finish.

Knot Wire Cup—For tight operations, corners and angle welds, curved surfaces, and pipe bevel cleaning. Double-row brush is for aggressive action in severe applications.

Knot Wire Wheel—Saucer-shaped radial wheels provide heavy-duty brushing and material removal, and still maintain some flexibility for cleaning filet welds and reaching into corners. Use with right angle grinders.

Stringer Bead Twist Wheel—Narrow brush face for stringer weld, piping, pipe grooves, and other hard-to-reach areas. Stainless steel brushes are recommended for aluminum, nonferrous alloyed metals, and stainless steel.

Twist Wire Wheel—For broader cleaning coverage, deburring, edge blending, and finishing. 3" wheels are used on straight grinders; 4" wheels are used on small angle grinders; and 6" wheels are used on bench and right angle grinders. Stainless steel brushes are recommended for aluminum, nonferrous alloyed metals, and stainless steel.

WEILER

Arbor-Mount Crimped Wire Wheels

For cleaning rust, scale, dirt, and paint; deburring; edge blending; roughening for adhesion; flash removal of rubber and plastic; finishing for appearance; and finish preparation prior to painting or plating.

Medium Brush Face—Greater fill density creates more aggressive brushing action.

Narrow Brush Face—Produces flexible brushing action; conforms to uneven surfaces or irregular shapes. 4" wheels are used on straight grinders.

Wide Brush Face—Heavy fill density creates minimal flexibility. Fast aggressive cutting covers more surface area in a single pass.

Polyflex® Encapsulated
3A190

WEILER

Small-Diameter Wire Wheel Brushes

Use for burr removal in slots and narrow confined areas, rust removal, surface refinement and juncture blending, weld scale removal, and flash removal of rubber or plastic.

5-Pc. Utility

WEILER

Brush Assortment Kits

Mini Grinder—Starter kit for 4½" and 5" mini right angle grinders. Fits all 5/8-11 threaded arbors. Use for deburring, deflashing, and removing rust, paint, and corrosion. Abrasive flap disc is used for grinding and finishing in one step.

Utility—Starter kit for use on die grinders, air tools, and electric and pneumatic drills. Components fit on all ¼" and higher arbor size chucks. Ideal for deburring and smoothing metal surfaces.

Wire Brushes

Crimped Wire Brushes offer high brushing flexibility for light- to medium-duty brushing on flat or irregular surfaces. Knotted Wire Brushes have a more-rigid construction for use on more-demanding cutting and cleaning applications.

Carbon Steel can be used on carbon steel, iron, and wood surfaces.

Stainless Steel can be used on aluminum, brass, copper, stainless steel and wood surfaces.

Abrasive Nylon can be used on most surfaces.

Cup Brushes—Use with a right-angle grinder to remove rust, paint, scale, and concrete. Especially good on large surfaces, corners, recesses, and in other hard-to-reach areas.

End Brushes—Use with CNC machines, robotic, die grinders, and drill presses to clean and deburr recessed areas or inside diameters of tubes and pipes. Can also be used for rubber and plastic flash removal, paint and rust removal, and mold and tool polishing.

Wire Wheel Brushes—Use with a variety of machines for tough, aggressive surface cleaning applications. Leave a rougher finish.

Crimped Wire Wheel

Cup Brushes

Knot Wire Wheel

¼" Stem-Mounted Wheel and Cup Brushes

Crimped wire wheel brushes have great flexibility on uneven surfaces. Knot wire wheel brushes have a strong twist for longer life and aggressive rough finishing. Brushes contain high-carbon, heat-tempered steel wire for aggressive cutting action and maximum life. Special 3-D crimping means less wire breakage.

Stainless Steel—Recommended for stainless steel, aluminum, and nonferrous alloyed metals.

WEILER

¼" Stem-Mounted End Brushes

For use in portable tools. Compact brushes are shaped for hard-to-reach areas. Use for carbon cleaning; I.D. pipe cleaning; die, mold, and tool cleaning and polishing; and rust and paint removal.

Circular Flared—Flare design accommodates the natural working angle for consistent finishing. Allows easy access to a broad range of surface angles and contours.

Crimped Wire—For light-duty brushing applications. Stainless steel brushes are recommended for stainless steel, aluminum, and nonferrous alloyed metals.

Knot Wire—High-tensile carbon or 302 stainless steel yields maximum cutting action. High RPM ratings meet or exceed industry standards.

WEILER

⅛" Stem-Mounted Miniature Brushes

Provide excellent accuracy where precision brushing is critical. Ideal for general cleaning, deburring, and blending surface junctures in electronics, instrumentation, and tool-and-die work.

Deburring Blade Material and Application Chart

BLADE MATERIALS

Ceramic—Use for deflashing plastic materials.

High Speed Steel—Excellent general purpose blade for use on most materials.

Cobalt (S)—The best choice for Stainless Steel.

Carbide (C)—Best for Hardened Steel and Cast Iron.

TiN Coated (P)—Significantly increases HSS blade Life.

APPLICATIONS

Series B—Use on straight and front hole edges to remove burrs and other surface defects.

Series C—Use on flat surfaces and front and back hole edges.

Series D—Use for precision work on thin-gage sheet metal.

Series E—Use on sheet edges in hard-to-reach applications.

Series BURR-BI—Use on hard and soft materials, including sheet metal up to 16mm (0.63") thick.

Series F—Use on Hole Edges (ID) and Outer Edges (OD).

Series K—Use for finishing and deburring sheet edges.

Series L—Use on inner and outer straight and hole edges on sheet metal.

Series M—Use for deburring and finishing tube edges.

Series U—Miniature tools for deburring and scraping applications in dies and molds industry.

Pressure-Feed Steel Cabinet 6YY21

Siphon-Feed Steel Cabinet 53RJ26

Siphon-Feed Steel Cabinet 48ME53

Siphon-Feed Polymer Cabinet 15E778

ECONOLINE ALC ALLSOURCE

Abrasive Blast Cabinets

Use for surface preparation, or to remove rust, scale, and paint from small parts and/or larger pieces with irregular surfaces. **Siphon-Feed** (suction) cabinets, use suction created by a venturi to suck the abrasive media into the airflow and out the nozzle; they let you refill media while in operation, for continuous blasting. Although production is slower than pressure-feed cabinets, they provide equivalent results at a lower initial cost. **Pressure-Feed** cabinets use a Pressure Pot to pressurize the abrasive media before it mixes with the air in a mixing chamber, producing a high-quality finish at a faster rate.

Note: Additional accessories and parts are available on Grainger.com®.

ALC Polymer Blast Cabinets—Cabinets feature large viewing window, protective underlay, and leak-resistant 1-pc. construction, and come complete with gun and hose. Ready to hook up to air and add abrasive. Can be used with a small shop vac (not included) as a dust collector.

Econoline Steel Blast Cabinets—Cabinets handle glass, aluminum oxide, corn cob, and silicon carbide abrasive media. Require 5-HP compressor and 12 cfm compressed air at 80 psi. They're constructed with 14-ga. steel bodies, 11-ga. steel legs, and have a spring-loaded trap door attached to the hopper bottom. Include carbide nozzle and air jet, regulator and gage, foot pedal actuator, and replaceable cloth-lined rubber gloves. Dust collector required (sold separately); except 6YY21 comes with 400 cfm unit.

ALC Steel Blast Cabinets—A large viewing window and oversized top door opening help accommodate a wide range of items. The fully welded construction keeps blasting media from leaking out of the cabinet. Include a dust collector.

Allsource Steel Blast Cabinets—A foot pedal-controlled siphon blast gun reduces operator hand fatigue and a rear-mounted 90 CFM dust collector minimizes the machine's footprint to free up floor space. The oversized front door opening lets you easily load a variety of items into the cabinet. 53CV99 has a 150 lb. grate capacity. 48ME53 has a 400 lb. grate capacity and 48ME54 has a 500 lb. grate capacity to let you work on heavier items, such as engine blocks and cylinder heads.

ECONOLINE ALC

Dust Collectors

Dust collection systems remove dust and dirt particles from the air, and return filtered air to the room.

Bag-Style Filter—Bag filters can be laundered and reused. Chip capacity is 90% @ 2.5 microns.

Cartridge-Style Filter—99.98% efficient cartridge-style filters remove particles from the air as small as 0.5 microns.

ALC WESTWARD ALLSOURCE

Portable Abrasive Blasters

For removing rust, scale, paint, and dirt from metals, wood, brick, and stone.

Note: Additional ALC accessories and parts are available on Grainger.com®.

Siphon-Feed—Westward model includes blast gun and 3/16" ceramic nozzle. 10Z912 has a steel hopper with pull handle and 6" wheels for easy maneuvering around the jobsite. 15E765 and 15E766 have steel construction and can be used with most dry abrasives. 15E766 includes sturdy steel cart with two 6" wheels.

Pressure-Feed—All Westward units include an air line filter and pressure gage to control airflow. 10Z914 and 10Z915 have a recessed top for filling of blast media. 15E742 and 15E745 have powder-coated steel construction with a manual pull-up tank closure and deadman handle design; can be used with most dry abrasives. Include hood.

Siphon Gun Blaster Kit—Simple blaster is ideal for small projects.

ECONOLINE

Portable Soda Blasters

Environmentally friendly units use soda media to remove coatings including carbon, paint, dirt, mold, oil, soot, and graffiti from almost any surface; no advance cleaning or surface masking is necessary. Water filter, pressure regulator, and control valve system included. ASME coded. 6YY25 is lightweight with a carrying handle. 10 lb. of soda provides up to 30 min. of blast time. Includes 5-ft. hose and ⅛" ceramic nozzle. 6YY24 is wheel-mounted and ready for instant hook-up to air supply. Includes 25-ft. hose, ⅛" ceramic nozzle, air safety lockout, and blast hood with cap.

Welding Helmets with Auto-Darkening Filters

- Auto On/Off power control
- Sensitivity and delay controls

All include: magnifying lens holder, (5) outside and (2) inside cover lenses. Digital Performance, Digital Elite, Digital Infinity, and T94™ Series also include lithium batteries and a helmet bag. All meet ANSI and CSA standards; except T94 Series does not meet CSA.

Classic Series—Feature 2 arc sensors, Auto On/Off, and Sensitivity control button. Battery operated with solar assist, except 38VU59 is solar only.

Digital Performance and Digital Elite Series—All feature easy-to-use digital controls. Battery powered with solar assist. Digital Performance series have 3 arc sensors and 3 modes: Cut, Weld, and Grind. Digital Elite Series performs with 4 arc sensors and 4 digital modes: Weld, Cut, Grind, and X-mode.

Digital Infinity™ Series—Features a large viewing area and 4 modes: Weld, Cut, Grind, and X-mode. X-mode uses electromagnetic sensors to help you see see your arc, even in bright sunlight or if sensors are blocked. InfoTrack™ tracks arc time, and gives you the ability to set an alarm or timer.

T94™ Series—Feature 4 arc sensors. ClearLight™ high-definition optics and X-Mode™ feature help you see the arc in even difficult conditions, such as in bright sunlight, or if sensors are blocked. The cover lens is simple and easy to change out, to help reduce downtime.

Weld-Mask™—Goggles provide auto-darkening in compact configuration. Includes 2 outside cover lenses, 2 sensors, antifog film, head-covering, and carrying case.

Welding Helmets with Auto-Darkening Filters

- Switching speed: 1/10,000 sec.

Speedglas™ 100 Series—Locks in light state grinding mode 3 when grinding. Delay function allows user to set opening time. With built-in magnifying lens holders. For most Stick, MIG and higher amp TIG and arc welding processes.

Speedglas™ 9000 Series—The slim design features precision optics and a comfortable suspension. Use in most MIG/MAG, Plasma, Stick, and TIG welding processes.

Speedglas™ 9100 Series—Feature a locking up-and-down pivot, side exhaust vents, and side windows. Sensitivity adjustment allows use with all Stick, MIG and TIG, welding processes with grinding torch modes. 4CWG9 has ratchet headgear.

Auto-Darkening Welding Helmets

WESTWARD

Ratchet headgear with removable sweatband. Include extra lens covers.

Solar—Provide UV/IR protection up to shade DIN 16.

Professional—Feature external shade control with grind function.

Professional Digital—Feature digital control display. 33N557 has 4 control buttons. Headgear can hold and lock. Internal slots hold magnify lens.

LINCOLN ELECTRIC

725S Series—Cheater lens-capable lightweight thermoplastic helmet features a Grind mode and has 2 independent arc sensors to help avoid blind spots. With continuously variable external shade control. Solar operated with battery assist. Meets ANSI Z87.1, CSA.

3350 Series—4C technology provides a large viewing area, and 1/1/1/1 Optical Clarity to help improve visibility and reduce eye strain. Solar powered.

2450 Series—With a 28% larger field of view compared to similar helmets in their class, and 4C Lens Technology, the 2450 Series helmets help improve visibility, reduce eye strain, and provide real color view. With 1/1/1/1 Optical Clarity. Solar operated. 54EE97 has 3 modes (welding, cutting, and grinding).

OPTREL

weldcap®—Comfortable lightweight cap has manual shade level adjustment and offers more than twice the field of view of most standard industry welding helmets. Battery operated. Meets ANSI Z87.1, AS/NZS 1337/1338.

vegaview 2.5—Improves your vision with more than 4-times lighter view in Light state and in Grind mode. Manual shade level adjustment. Solar powered with battery assist. Meets ANSI Z87.1.

e650 Series—Includes Grind Mode, continuously variable sensitivity control, and opening delay function, as well as PAPR respiratory protection. All functions can be accessed from outside the helmet. Solar operated with battery assist.

e684 Series—Special cooling design with an HD viewing lens and adaptive auto-adjusting shade level. Includes PAPR respiratory protection. Battery operated. Meets CSA Z94.3 standards.

panoramaxx—Comfortable helmet helps you improve awareness of your surroundings, with a panoramic faceshield that offers a 6-times larger field of vision than standard welding helmets. A special UV/IR filter provides truer color rendering. Solar operated, with battery assist.

JACKSON SAFETY

NexGen HSL100—Features 3 modes: Weld, Torch, and Grind. With sensitivity and delay adjustments that can be made with easy-to-use digital controls. Includes a built-in mag lens holder. Solar operated with battery assist.

HSL 100—Ultra light weight helmet is made to give you an unobstructed view without lifting the hood. Features a variable Auto-Darkening Filter, with 4 independent sensors and easy-to-use digital controls that allow you to make sensitivity and delay adjustments for different tasks and durations.

Passive Welding Helmets and Faceshields

WELDING HELMETS

Flip Up Front

Helmets have an impact-resistant straight top that extends well over the head for added protection. Adjustable ratchet suspension.

Confined Space Pro

Super Kool helmet coating resists weld spatter and keeps helmet cooler than uncoated helmets. Proprietary lens retention system allows easy filter, cover, and protective plate loading. Ratchet suspension.

Super Slim

Super Tuff™ nylon helmets are lighter than fiberglass. Drop-down ratchet headgear. Super Kool™ helmet has coating that makes helmet cooler, and sheds spatter without burning.

Tigerhood

Seamless-shell thermoplastic helmet has an extended throat to help block fumes, smoke, and sparks; reducing the risk of burn. With lift-front lens and 3C headgear. Installed shade 10 filter lens. 10C434 and 10C432 have telescoping lid. 2XKX9 includes loop for attaching hard hat.

Pipeliner

Fiberglass with neoprene strap headband.

W10 Series

Passive welding helmets offer a clear, unobstructed view of the weld puddle. Include polycarbonate filter. 2KUV9 has a flip front. ANSI Z87.1 and CSA Compliant.

WELDING HOOD

Leather hood with ratchet headgear is designed for tight or confined spaces. Cover and filter plates (included) are easy to load.

INFRA-GUARD FACESHIELDS

Protect user from infrared and ultraviolet rays during oxygen/acetylene welding and cutting operations. Ratchet headgear.

Powered Air Purifying Respirator (PAPR) Systems and Respirators

POWERED AIR PURIFYING RESPIRATORS (PAPR)

NIOSH Certified, except 49WM68 and 32NC32. APF of 25.

Miller—Feature a lightweight, low-profile blower design with integrated load-bearing shoulder straps to help reduce fatigue, and a 9.22 sq. in. auto-darkening lens. Dual airflow speeds allow for user adjustment in varied work conditions. Audible and vibrating alarms indicate low battery and/or constricted airflow.

3M—Feature side shields that provide improved peripheral vision, and an auto-darkening visor plate.

LPR-100 HALF MASK RESPIRATORS

Low-profile design fits comfortably under a welding helmet without obstructing the user's view. Large exhaust valve eases breathing. Filter media maximizes efficiency in humid conditions, extending filter life. NIOSH Certified, APF of 10.

Fume Extractors

EXTRACT-ALL

- Filters not included with all models; select primary filter pkg. based on application needs

Multistage filtration removes smoke, dust, solvent fumes, lab fumes and other contaminants to improve air quality in a variety of small- to medium-size industrial applications.

For additional fume and dust collectors, see pages 2362 and 2408.

LINCOLN ELECTRIC® Miller

Fume Extractors

5GWP6

LINCOLN

Automatic start/stop current sensor extracts only when needed, extending motor life. Choose low or high extraction settings.

Miniflex®—Made for light-duty welding applications, small size.

X-Tractor®—The high-efficiency polyester filter can be cleaned using compressed air with the rotary air jet system. Includes 16-ft. flexible hose, 2 spare sets of motor carbon brushes, and 12-ft. power cord.

Mobiflex®—Ideal for light- to medium-duty use. An internal spark arrestor prevents sparks from reaching the filter. Do not use with cutting or arc gouging operations.

MILLER

Nanofiber filter technology captures submicron welding particles.

FILTAIR® 130—Adjustable airflow. Includes 20-ft. power cord and 8-ft. collection hose.

FILTAIR® MWX—Delivers MERV 15 filters that capture submicron weld fumes and provide a longer holding capacity.

FILTAIR® SWX-S—Designed specifically for welding applications with higher arc times, this telescoping-arm unit can be mounted on a wall or column. Includes a self-cleaning filter and all mounting brackets. MERV 15 rated.

FILTAIR® SWX-D—Similar to the SWX-S, but with a disposable filter, this unit is designed to be used in lighter manufacturing applications with lower arc times. Includes all mounting brackets.

Welding Blankets, Rolls and Pads

Welding Blankets—Use to protect workers and equipment from intense heat, flame, welding sparks, and molten metal splash.

Welding Blanket Rolls—When you need extended lengths or other custom size blankets, this economical solution can be cut to length.

Welding Pads—Welding pads are made with 1" of high-heat insulation, encased by a solvent-, abrasion, and puncture-resistant material. Can be used as kneeling pads, heat shield when working on hot vessels, and for insulating.

Welding Curtains and Rolls

Curtains—Use to enclose robotic welding cells and other welding work areas to create a customized, enclosed space and help protect personnel and equipment from welding sparks, spatter, and slag. Silicone Coated Fiberglass Curtains have one grommet on each corner.

Curtain Rolls—When you need extended or other custom sized curtains, this economical solution can be cut to size. Curtain Rolls With Grommet have grommets on 12" centers on one side.

Screens, Curtain Walls and Booths

Screens, walls, and booths help safely confine hazardous sparks, arcs, or open flame in open areas, where there is no place to hang a curtain.

Screens—Easy-to-assemble kits include flame- and heat-resistant sides and a sturdy, freestanding steel frame.

Curtain Walls and Booths—Track and roller Curtain Walls provide good protection, while maintaining easy access. Kit includes curtain, 18-ga. steel track, rollers, and suspension mounting hardware. 4-sided Welding Booth Kit enclosures have one side with a sliding curtain wall and 3 fixed sides.

Lincoln 6JDU7

General Purpose MIG Guns

Bernard—Feature a rotatable neck tube.

Lincoln Electric—6JDU7 features an abrasion-resistant, extruded rubber jacket for long cable life. 49JR58 has a chrome-plated gun tube that keeps splatter from clinging to the tube for long life.

Miller Electric—Ball-and-socket rear swivel allows for a free range of motion.

Miller 5GWK8

Spool Guns

- 4" spool capacity
- For argon gas and aluminum wire

Lincoln Electric—The full travel mechanical trigger, 10-ft. gun cable, control harness, and gun connector ease connecting the gun to a welding machine.

Miller Electric—Feature a two-stage trigger and spool canister that rotates 180°.

MIG Nozzles

Note: Nozzles are not interchangeable with all MIG manufacturers. To ensure compatibility, the brand of the nozzle must be the same as the brand of the MIG gun.

MIG Contact Tips

- Copper material

These tips guide the wire and transfer the current from the conductor tube, also known as a swan neck or goose neck, through the filler wire and finally to the workpiece. Tips with a slip-on connection allow toolless changeouts.

MIG Gas Diffusers

- Threaded connection

Gas diffusers, also known as retaining heads, are designed to conduct electricity to the contact tip while distributing the shielding gas. They also hold the contact tip and nozzle in place on the neck of the welding gun.

TIG Torch Kits

TIG torch heads have a rigid neck without a gas valve.

Lincoln Electric—Kits come in a handy carrying case.

Miller Electric—Water-cooled models provide around-the-head cooling to reduce overheating for long torch life.

Tungsten Electrode Grinder

For diamond grinding, flatting, and notch-cutting your tungsten electrodes. An enclosed grinding area captures nearly all the excess tungsten electrode dust for safe and easy disposal. Handles tungsten diameters from 0.040" to 3⁄16" (1.0mm to 4.8mm).

Voltage	Input Frequency	Horsepower	Nameplate RPM	Electrode Dia. Range	Minimum Electrode Length	Item No.

Stick Welders

ESAB—Resists power fluctuations even while working on long extension cables up to 300 ft. (12 AWG size).

Hobart—Precise amperage control allows you to adjust output by as little as one-amp increments.

Lincoln Electric—5JPG3 has a front-mounted AC/DC polarity switch and full-range amperage selector switch. 6FKG4 features a full-range continuous current control dial with indicator.

Miller Electric—53AY42 has a Miller X-Case that protects unit and eases transport. Hot Start technology with 404J60 provides quick, reliable starting.

Lincoln 6FKG4

Stick Welding Electrode Ovens

- Fiberglass insulation
- 18 in max. electrode length

Help ensure high-quality welds by preventing welding rods and electrodes from absorbing moisture from the atmosphere.

Benchtop—Models have a circular shape to promote even heat distribution. 6YE40 features a spring latch that tightly secures the insulated lid for oven transport, while 5HJ70 has a lockable door. Removable shelves with 467C99 oven allow for the heating of welded parts.

Portable with Handles—Dryrod ovens feature a spring latch that tightly secures the insulated lid and a handle that can be extended or retracted for oven transport or storage. 467D01 is a cylinder-shaped oven with a rod elevator that allows you to remove electrodes with ease and a fill tab for fast loading of electrodes into the oven.

Portable with Wheels—The wheels have a steel hub and ball bearings for long life.

Stud Welders

Capacitive Discharge—Process allows small diameter studs to be welded to very thin material. The entire weld cycle is completed in several milliseconds so welds can be made to thin metal sheets without burn through, discoloration, or distortion. This process allows the stud welding of dissimilar metals.

Drawn Arc—Allows most sizes or types of weld studs to be welded. The weld studs are manufactured from weldable material with a special arc stud tip. The welding process creates a full fusion weld that becomes stronger than the stud itself. Suitable for use with aluminum, mild steel, and stainless steel.

Plasma Cutters

- Single-phase, except 28MG90 is three-phase

AirForce™ 27i and 40i—Inverter-based cutters can cut through most conductive metals. Operate from standard 120 or 240VAC power with MVP power cord. AirForce 40i adds Pilot Arc Controller that allows you to cut expanded/perforated metals and painted or coated surfaces without retriggering the torch.

Tomahawk 375 Air—Has an internal air compressor that enables operation in environments where external compressed air is not available.

Tomahawk 1000—Features PowerConnect® technology that automatically senses and adjusts input power from 200 to 600V. Cutting output remains steady throughout the entire input voltage range.

Spectrum® 375 X-TREME—Automatically connects to 115V or 240V. Includes 12-ft. torch and work clamp cables, MVP power cord, plugs, storage case, and extra consumables.

Spectrum® 625 X-TREME—Ultra-Quick Connect™ torch cable allows portability and easy interchangeability of handheld or machine torches, for manual or automated cutting. Flexible quick-connect ground cable is easy to position. Each includes torch with cable, work clamp with 20-ft. cable, 12-ft. power cord, MVP adapters with 5-15P (120V,15A) and 6-50P (240V, 50A) plugs, and extra consumables.

AirCut 15C—Lightweight cutting system has a built-in air compressor, to eliminate the need for an external compressor. Provides outstanding cutting power right out of the box and has easy-to-use hand torch switch controls.

CUTMASTER®—Powerful, lightweight units have hand torch or hand pendant control. Auto Pilot restart reignites the pilot while cutting expanded metals for more efficient operation. Include 75° angle torch with 20-ft. lead (except 15-ft. lead with 56LE80), 10-ft. input power cable (except 9-ft. cable with 56LE80), work cable and clamp, spare parts kit.

Built-in Air Compressor.

Plasma Torches

These replacement, handheld plasma torches connect to compatible plasma cutters to make precise cuts or gouges in metals such as steel, stainless steel, and aluminum. They create minimal slag and cause minimal distortion when used on thin materials.

Heck Industries Inc. metabo

Corded Weld Shavers

Weld shavers cut with multiple indexable inserts that remove material as the milling head rotates. The milling head adjusts up or down to set the depth of cut. Base plates on each side of the head stabilize the cutter and form a slot for guiding the cut along the weld.

Maximum Weld Removal Height	Maximum Weld Removal Width	Weld Height Adjustment	Number of Inserts	Brand	Item No.

Welding Accessories

Two Hose Manifolds—Connect at the regulator outlet, enabling use of 2 torches at the same time.

Welding Pliers—Use these spring-loaded pliers to cut and draw welding wire, clean parts, grip nozzles, and install or remove insulator bushings. PVC handgrips.

Butt/Fillet Weld Gauge—Use to check and measure the size of butt welds, root openings, and convex and concave fillets. A finger knob allows easy locking. Laser etched stainless steel with threaded pin.

Cylinder Adapter Set—F31 tank to regulator adapter converts B tank CGA 520 to MC CGA 200 regulator. F41 converts MC tank CGA 200 to B CGA 520 regulator.

Hose Repair Kit—Includes heavy-duty crimper, both A and B sizes of 24 nuts, 24 nipples, 4 couplers, 32 ferrules, and 6 splicers. For hoses 3/16" to 1/4" I.D.

Chipping Hammers and Brush—Forged head has chisel on 1 end and point on the other to remove weld splatter. Steel shaft and wire handle.

MAG-MATE · SUMNER (A Southwire Company) · GENERAL · magswitch

Welding Grounds and Squares

Magnetic Welding Grounds—Powerful, permanent magnetic clamps attach securely to work surfaces. Spring-loaded models have breakaway release handle. On/Off models can be used on flat or pipe surfaces.

Magnetic Holder—Offers fast and accurate positioning, holding, and fit-up of round, and/or square tubing and steel plates.

Magnetic Welding Link—Holds steel plates in position for welding, brazing, and soldering.

Magnetic Welding Squares—Have 2 holes for fixture mounting, and allow thread-rod positioning for larger sheets. Corrosion-resistant zinc-plated poles. Can be used on flat or pipe surfaces.

Welding Magnet Protractor—Magnetic clamp holds ferrous metals at fixed angles for clamping or welding.

TWECO (An ESAB Brand)

Ground Clamp
1UYE9

Arc Welding Accessories

Ground Clamps—High-tensile, tight spring grips. 98% copper alloy minimizes resistance in electrical flow. Tweco clamps 44ZE41 and 44ZE34 are steel with a brass jaw. 44ZE44, 44ZE33, and 44ZE39 feature copper construction. All other clamps have a steel clamp with copper strap and jaw.

Cable Connectors—Fully insulated with rubber boots. For use with arc welders.

Ball Point Lugs and Female Terminals—Copper lugs are rated at 80V.

Jack Stands and Roller Stands

Offered with a variety of heads to keep workpieces in position. Jacks feature 1½" Acme fine adjustment thread, large adjustment handle, quick-action and lock washer. Set screw can lock the jack head to the stand with no loose pieces. Jacks are independently load tested.

Lo-Jack—Fall Guard protection allows safety zone around lock washer. 1" square tube base construction with rounded foot pads. Strut tension plate provides superior lateral support.

Fold-A-Jack—Jack folds up for simple storage and has a built-in carrying handle for easy transport. Fall Guard feature provides a safe zone around the lock washer.

FAB SAF JACK—Features a quick-action lock washer for fast setup.

Hi Boy—Easy-to-transport tall jack is specifically designed for use in tight pipe installations, such as in mechanical rooms or tunnels.

Max Jax—Features 12" V head for maximum safety.

Adjust A Roll—Features a simple design that won't interfere with welding operations, and fast roller adjustment from either side for easy pipe positioning. Bronze bearing helps eliminate arcing.

Pro Roll—Quick-change roller housings help speed setup. A brake locks loads for layout or fit-up. Adjustable-height, with leveling on either side of stand.

Beam-Jax—Has automatic clamping device that centers load. Detachable handle attaches to either side and rotates out of operator's way. Reversible beam forks. Handles beams up to 24".

Flange Alignment Tools

Mul-T-Square—Handles up to 8" flanges and up to 14" fittings. Consists of two 45° arm blades. Marked blades indicate Imperial and Metric units.

Flange Leveler—2-hole and level in one operation. Use Qwik Pin nuts for fast action. Acme threads.

Flange Spreaders—Used for 150 to 1,500 lb flanges. Drive can be rotated by 1⅜" wrench or ½" bar.

Qwik Pins—Quick installing pins work to level flange (2-hole) for tack and weld-out. Acme threads.

Rotary Ground Clamp—Positive anti-arc bearings take loads up to 400 Amps.

Digital Angle Finder—Can be used to establish an accurate centerline on pipes and tanks. Built-in spring-loaded hardened striking pin marks location with the push of a button. Detachable digital gage has a magnetic base.

Visible Dye Penetrants
3WU62

MAGNAFLUX

Welding Penetrants and Inspection Kits

VISIBLE DYE PENETRANT TESTING

Use this 4-step process to detect stress and fatigue cracks in metal surfaces. Kit 3WU62 includes 2 cans each of visible penetrant and developer, 4 cans of cleaner/remover, paint marker, and hand wipes.

FLUORESCENT PENETRANT TESTING

Helps find the tiniest cracks in any metal surface. Very sensitive fluorescent dyes comply with most military specifications for fluorescent inspection.

MAGNETIC PARTICLE INSPECTION

Fluorescent and visible magnetic powders, electromagnetic yokes and testing kits provide a nondestructive method to quickly find defects in ferrous metal.

Layout Fluids, Removers And Primers

LAYOUT FLUIDS

DYKEM STEEL BLUE and STEEL RED—Dry quickly, for minimal prep time before scribing. Stay flexible without cracking or chipping. Noncorrosive and toluene-free.

Blue Layout Fluid—Fast-drying, nonflaking, non-etching, and won't peel. Adheres to all metals or glass. EZ Touch® Fanspray nozzle. Dark blue color. Methylene Chloride free.

DYKEM Hi-Spot Blue—Even-spreading paste shows high spots on bearings. Non-hardening film coating may be left on surfaces to reduce clean up and re-bluing time.

DYKEM Machining Layout Fluid—Permanent stain provides easy identification of fasteners, parts, inventory, tools, or assemblies. Dries quickly and resists moisture, grease, and oils.

LAYOUT FLUID REMOVERS AND PREP

DYKEM Remover and Prep—Remove and dilute layout fluids and staining colors. Dries in minutes. Does not contain toluene, 1,1,1-trichloroethane, chlorofluorocarbons, or chlorinated solvents.

Layout Fluid Remover—Specifically formulated to remove layout fluids quickly and efficiently.

WELDABLE PRIMERS

Help eliminate the need to clean metal surfaces before welding. Corrosion- and rustproof primer can be applied to a wide range of metals. Ability to strike welding arc without removal. Max. temp.: 800°F. Dry time: 6 hr. Aluminized finish. 31MF04 is a 12 oz. aerosol can. 31MF05 comes in 1 gal. can.

Red-Riter®

Flat Soapstones 5KH40

Welding Pencil, Markers & Soapstones

Welding Pencil And Markers—Use as an alternative to soapstone to create torch-resistant markings that will not rub, burn, or blow off. Reflective silver and red colors improve visibility when cutting or welding.

Soapstones—Produce highly visible layout lines on metal or concrete. 5KH41 and 5KH43 include holders with built-in sharpener and pocket clip.

Brite Zinc Galvanizing Compounds

Paintable, rust-free coatings match the look of hot-dipped galvanizing. Pass ASTM A780 inspection. Galvanized bare steel can be unpainted. Dry time: 15 to 30 minutes. Bare Steel formula is 95% zinc-rich bare steel for maximum corrosion protection and mechanical durability. 24A431 and 24A433 have nonclogging aerosol spray head.

Temperature Sticks

Temperature Stick G6576

- Accuracy: ± 1%

Temperature indicators mark surfaces with a chalky and dull marking that changes to see-through and glossy at the rated temperature. Can be used in in annealing, forging, welding, bonding, forming, and similar applications. Include nonslip gravity-advance holder.

▶CHOOSE: Temp. Range	Tip Size	Brand	Item No.

Spatter Cleaning and Wire Lubrication Pads and Tools

Lube-Matic®—Engineered to reduce tip and liner wear, burnback, and wire jams, and to promote smoother arc feed. Black felt pads are for all types of steel wire; pretreated with Lube-Matic liquid. Red felt pads are for cleaning all wire; excellent for aluminum. Liquid cleaner/lubricant helps reduce wire drag 60%.

Nozzle-Kleen®—Remove spatter from nozzles, tips, and diffusers, and clean torches without disassembly.

Welding Regulators

- Single stage

Victor®—Durable forged brass body and cap. Feature stem-type seat mechanism for accurate gas flow, and Delrin® cap bushing. Edge Series regulators have high contrast graphics, built-in gauge guard, and 5-yr. warranty.

Miller—Filtered Sure Seat™ filtered seats prevent contamination from entering the seating area, reducing repair costs and downtime. Made with a rugged forged brass body, nickel-plated bonnet, and neoprene composite diaphragm.

Harris—Feature an encapsulated 1-pc. PTFE capsule seat assembly with 10-micron filter. 5KZ42 has a forged brass body and cap, along with a stem-type seat mechanism, stainless steel diaphragm, and Delrin® insert bushing.

TurboTorch—Check pressure, test, and purge lines prior to brazing to protect joints against oxidation. Easy-to-read 2" gauges with forged brass body and housing cap. Gauges are marked with dual graduations, psig and kPa.

Uniweld®—Includes a polished chrome bonnet, easy-to-read 2" gauge, neoprene diaphragm, and heavy-duty stem-type seat-and-nozzle assembly.

High Purity Regulators

- 2½" gauge
- 2" body dia.

Encapsulated filtered seat design helps prevent contaminants from entering seating area, while the nickel-plated finish with brass/stainless steel barstock construction prevents outgasing. Stainless steel diaphragm. Built-in safety relief valve. Two-stage models provide precise pressure control of carrier gases or calibration mixtures used in chromatography or for thermal conductivity.

Flow Gauge and Flowmeter Regulators

Use for shielding gas with argon or CO_2 in MIG and TIG welding. Flow gauge regulators are for accurate measurement of gas flow. Flowmeter regulators incorporate flowmeter and regulator into one compact unit.

20UK16

Heavy-Duty Series
22UM02

The Wurks®
3NY90

Performer Edge™
Series 2.0
482W08

Cutting, Welding, and Heating Outfits

Medium and heavy duty outfits feature in-tip gas mixing technology and include torch mount flashback arrestors. Tag-A-Long™, Toughcut™, Versa-Torch™, and The Wurks® outfits include: torch handle, cutting attachment, cutting and welding tip, oxygen and acetylene regulators, twin welding hose, goggles, and striker.

Note: For more Consumables visit Grainger.com®.

CUTTING, WELDING, HEATING

Heavy-Duty—Combo outfits cut up to 8" and weld up to ½" with optional tips.

Journeyman®—Include cutting tip, heating and welding nozzles, ¼" x 20-ft. T-grade hose, goggles, striker, and tip cleaner. 54RZ72 and 54RZ75 have a CGA 300 connection, which uses a right-hand female thread on the regulator. 54RZ73 and 54RZ76 have a CGA 510 connection, which uses a left-hand male thread on the regulator.

Mastar® Maintenance—Lightweight, portable oxygen/acetylene outfits include a thruster air/acetylene tip and air/fuel adapter to convert welding handle for soldering with acetylene only, and eliminate use of oxygen. All outfits include industrial-grade regulators with easy-to-adjust T-handles, WH550 rear valve welding handle, welding tip, carrying stand or rolling cart for MC or B and R or R40 tanks (tanks not included), 12½-ft. twin hose, flint lighter, and goggles.

Medium-Duty—Cut up to 6" and weld up to ⅜" with optional tips.

The Wurks®—12-pc. kit for welding, brazing, cutting, and soldering tool box. All fuel gases are mixed in tip for maximum safety. Includes tip cleaner set with 12 sizes of cleaning wires and file and all-leather welding gloves. Packed in The Wurks Box with tray.

Versa-Torch™—Versatile system has nickel-plated torch handle, cutting attachment, heat tip and carrier, and reverse flow check valve. Cuts up to ⅜" and 3" with optional tips. Welds up to ⅛".

CUTTING, WELDING

Journeyman® 450—Includes cutting tips and welding nozzle.

Performer Edge™ Series 2.0—Heavy-duty outfits cut up to 6" and weld up to ¼" with accessories. They include 2 regulators, cutting attachment, welding handle, welding nozzle, heating nozzle, tip cleaners, striker, T-grade hose, and goggles.

Tag-A-Long™—Portable and light-weight outfits feature Series 30 regulators and reverse flow check valves. Cut up to ⅜" and 6" with optional tips. Weld up to ⅛" and ½" with optional tips. 6GJG1 also includes oxygen and fuel regulator, oxygen and acetylene cylinders, and lighter. Acetylene regulator not included.

CUTTING, HEATING

Heavy-Duty Series—Torch and hand torch outfits cut up to 12" with optional tips.

TURBOTORCH

Portable Totes

Designed for HVAC and light fabrication applications, these portable outfits feature a molded, plastic carrying case with an ergonomic handle and balanced design for easy carrying. The built-in storage compartments help you keep your consumables and other accessories right at-hand. All include Oxygen regulator, fuel regulator, 12.5-ft. dual 3⁄16" hose, goggles, check valve, striker, and tank key.

Note: For the full contents of each outfit, go to Grainger.com® and search by Item No.

Miller UNIWELD SUPPLIER DIVERSITY

Brazing Outfits

QUICKBRAZE®

- Concentrated 6000°F flame

Provides pinpoint heat with precise flame control to repair leaks in sealed systems and other HVAC applications. Brazes from ½" to 1⅜".

LITTLE TORCH™

Torches produce controlled, stable flames—from pinhead-small to large enough to silver-solder large objects—that are hot enough to melt commercially weldable metals, glass, and ceramics. Include an 8-ft. hose. Caddy Outfit 6GJG5 also includes a cylinder/torch caddy, acetylene and oxygen regulators, a pair of reverse flow check valves, an oxygen cylinder, and an acetylene cylinder.

CAP'N HOOK®

Lightweight, portable oxygen/acetylene outfits feature MTF #5 Cap'n Hook 5-flame tip. Complete with 71 front-valve welding handle, welding tip, oxygen and acetylene regulators, carrying stand, hose, flint lighter, and goggles. 22UL96 and 22UL97 include cutting attachment and cutting tip.

ACCESSORIES

Cap'n Hook Welding/Brazing Tips

Heat copper tubing to 5600°F with pinpoint accuracy. Fit Uniweld 71 and WH550 welding handles. 100% wrap-around heat.

Cap'n Hook Torch Kit

Instantly upgrades torch kit for micro maintenance work. Includes lightweight 71 welding handle for "A" hose connections, Cap'n Hook 5-flame tip which provides even distribution of heat for various tube brazing applications, and 2 high-performance Micro 6000 tips for pinpoint accuracy in tight places: MTW #2 for brazing or welding, and MTT flexible twin tip for brazing return ends without overheating adjacent brazed joints.

Flame Barrier

Provides a protective barrier between flammable surfaces and open flames. Has structural integrity up to 2300°F and a melting temperature of 3200°F.

Tuning Fork™ Tip

Helps remove and replace heat pump reversing valves without destroying original copper tube and fittings. Heats all fittings at once for easy removal. Fits Uniweld 71 and WH550 welding handles.

Spiral Tip Cleaners and Flint Lighters

High-quality, spiral tip cleaners quickly and easily clean out tip orifices. Rustproof, wires are stainless steel. Aluminum case features locked knot that secures small wires and includes hardened steel file. Tip cleaner data and drill reference size stamped on back of case. Flint Lighters safely and quickly ignite tips on torches and cutting attachments. Flints can be easily replaced.

Flashback Arrestors, Quick Disconnects, and Check Valves

Flashback Arrestors— Built-in check valves prevent reverse flow of gases.

High Flow Regulator Flashback Arrestors— Thermal shutoff positively shuts off gas and can be used on all sizes of Harris tips.

Quick Disconnects— Feature automatic gas shutoff.

Check Valves— If reverse gas flow starts, valve closes immediately for total shutoff.

Twin-Line Welding Hose Coupled Assemblies

Welding hose assemblies come with fittings installed on both ends of the hoses and have two hoses: a green hose for carrying oxygen to welding equipment, and a red hose for carrying acetylene to welding equipment. The hoses have oil-resistant covers. The hoses' cover resists flames and oils.

COXREELS ®REELCRAFT

Welding Hand-Crank Reels

- Max. operating pressure: 200 psi

Reinforced steel construction includes powder-coated finish for corrosion resistance. These low-pressure reels mount on the floor, wall, bench, or on trucks. Reels use Grade R (oxygen and acetylene gas) or Grade T (oxygen and fuels) hoses. They are used with oxygen and acetylene welding hoses in applications where space, weight, and flexibility are important.

®REELCRAFT COXREELS

Welding Spring-Return Hose Reels

38EE87

16X587

- Max. operating pressure: 200 psi

Reels have an independent dual-swivel design that allows a positive separation of gases with double sealed O-rings to prevent leaks. The dual-swivels are made from aluminum that's hard-coated for wear resistance, and the swivel body and inlet are permanently identified with machined grooves on the gas side to assure proper installation. Reinforced steel construction includes powder-coated finish for corrosion resistance. These low-pressure reels mount on the floor, wall, ceiling, bench, or on trucks, and include an adjustable guide arm.

HVAC, Plumbing, and Maintenance Air/Gas Kits

Air/Acetylene Soft Flame Kit—5KH21 includes RB acetylene regulator, S23 soft flame tip, TH3 screw-connect handle and H12 12½-ft. acetylene gas hose.

5KH29 includes S21, S22, S24, S25, S26, and S27 tips that fit 5KH21 (Uniweld K37) and most screw-connect air/gas torch handles.

Air/Acetylene Twister® Kits—For brazing and soldering copper tubing in maintenance and HVAC applications. Kit includes RB acetylene regulator, TH6 quick-connect handle, A-3 and A-11 Twister tips, H12 12½-ft. acetylene hose, and 502 stand.

5KH22 tips fit most quick-connect air/gas torch handles. Includes A-5 and A-8 sizes to extend 5KH08 Air/Acetylene Twister Kit's brazing and soldering capabilities.

General Purpose Lubricants

Reduce friction and wear, and prevent machinery from overheating. They leave a slippery coating on two surfaces to keep moving parts like wheels, hinges, and gears moving smoothly and extend the life of equipment. They also provide some protection against water damage, contaminants, and corrosives.

Cable & Wire Pulling Lubricants

- Nonflammable
- Nonconductive
- Nonstaining
- Not NSF rated
- Not odorless

These lubricants are applied to wire or cable so they can be pulled smoothly through long conduit runs or runs with many bends. They reduce friction and pulling tension, so they save time and minimize damage to wire insulation and cable jackets, which prevents performance issues. They're safe for use on most plastics, but they should be tested on a small area first.

Electrical Lubricants

- Flammable
- NSF rated H2 for no food contact
- No additives

Protect electronic components against moisture damage and corrosion that can cause an electrical malfunction. They also clean components, loosening corrosion or whisking away moisture. These lubricants have an amber color and have a petroleum distillates base.

- Not odorless
- No additives

Prevent belts in machinery and equipment from hardening and accumulating dirt, which reduces wear and tear and increases belt life. They are ideal for flat, round, or V-shaped belts in leather, rubber, or canvas.

Trolley Lubricants

- Colorless
- Odorless
- No additives

Prevents bearings from sticking in overhead conveyors and chains. It leaves a film on overhead trolley chains commonly found in meat, poultry, and fish-processing plants. It remains fluid at low temperatures and won't wash off equipment with water.

Series	Container Size	Lubricant Base	NSF Rating	Operating Temp. Range	Flammability	Item No.

Sugar-Dissolving Lubricants

- Colorless
- Odorless
- No additives

Used in food and beverage facilities to remove sugar and fondant from equipment. They leave a light, durable film on conveyor, cutter, and fastener surfaces while providing short-term corrosion resistance.

Series	Container Size	Lubricant Base	NSF Rating	Operating Temp. Range	Item No.
Food Lube	15 oz Aerosol Can	Mineral Oil	H1 Food Grade	41° to 203°F	29FY01

	1 gal Jug				29FY03

Chainsaw Lubricants

Typically formulated with a tack additive to help them stick to the saw's chains and blades (sometimes called guidebars). These lubricants reduce friction between the moving parts to prevent damage caused by locking up, excessive heat, or buildup. They're applied to the chain and penetrate the pins, bushings, and blades.

General Purpose Dry Lubricants

- Flammable

These lubricants reduce friction between moving parts with a powdery coating. They lubricate parts such as rollers, gears, and chains without a fluid. They can withstand high temperatures and won't break down and drip. They resist dust and dirt and prevent grime from building up on equipment.

Chain & Wire Rope Dry Lubricants

Prevent damage by reducing the friction between the chain or rope as it engages with the equipment. The lubricant penetrates wire rope and the pins and bushings within a chain, leaving a dry film behind to prevent dust or dirt from sticking.

Penetrating Lubricants

Loosen fasteners or bolts that are stuck or frozen in place so they can be removed or separated. They seep into crevices or small spaces between threaded parts to release them. They can displace moisture and prevent corrosion between fasteners. Penetrating lubricants evaporate more quickly than other lubricants, so they are better used for short-term lubrication.

Jet-Lube Brush Top Can 26W746

Loctite Brush Top Tube 45MY36

Marine Grade Anti-Seize

- Nonflammable
- Not NSF rated
- Odorless
- No additives
- Water resistant

Can withstand exposure to fresh and salt water without washing out and prevents components from corroding or locking together. This anti-seize is metal-free to prevent water and ground contamination.

Food Grade Anti-Seize

NSF H1 certified for use on food processing machinery or wherever incidental food contact is possible. It's white to show contaminants. It prevents fittings, bushings, flanges, and other components from sticking together or seizing.

Heavy-Duty Anti-Seize

- Not NSF rated
- Not odorless
- Conductive

Formulated with graphite and molybdenum (moly) to withstand extreme temperatures and pressure. It's commonly used in manufacturing, milling, and mining facilities to keep fittings and flanges from locking together.

Nuclear Grade Anti-Seize

- Nonflammable
- Not NSF rated
- Not odorless
- Conductive

Used in nuclear, chemical, and pharmaceutical plants to prevent components in reactors, steam generators, turbines, and other equipment from sticking and seizing. Nuclear grade anti-seize has very low levels of halogens, sulfur, nitrates, nitrides, and low-melting metals, so it can be used in applications that require high purity.

Corrosion Inhibitors

Create a barrier between metal surfaces and corrosive materials like water and salt to increase the surface's corrosion resistance. They're a good choice for use on machinery and equipment in outdoor locations or humid or wet areas.

Mold Release

Applied directly to molds to create a barrier that prevents materials from sticking to them. This allows the casted product to be released without damage to the mold or the product, so it increases the life of the mold, improves the final product's finish, and reduces production times.

Cleaners

GASKET REMOVER
Solvent-based cleaner removes baked-on fiber gaskets, gasket adhesives, and sealants. Excellent on paint and varnish. Contains no methylene chloride.

DUSTER™ AEROSOL DUST REMOVAL SYSTEM
Powerful blast removes dirt, dust, and embedded debris on energized equipment. Nonflammable and safe on all plastics.

FOODLUBE SUGAR DISSOLVING FLUID
Removes sugars and fondants from surfaces. Lubricating film helps prevent new sugar deposits and provide short-term corrosion protection on metal surfaces. DETEX® container plastics are metal- and X-ray-detectable.

CD887 COIL AND FIN CLEANER
Water-based, foaming cleaner for use on refrigeration and A/C coils. Nonflammable and noncorrosive. Safe on all metals.

GRAFFITI REMOVER
Gel cleaner removes or helps clean multilayered or painted-over graffiti, paints, pen marks, crayon, ink, lipstick, scuff marks, lacquers, and varnishes.

HYDROFORCE® GLASS CLEANER
Ammonia-fortified, water-based formula with nonstreaking foaming action. 10 to 10.5 pH.

HYDROFORCE® STAINLESS STEEL CLEANER AND POLISH
Eliminates fingerprints and watermarks, leaving a protective, nongreasy barrier. Water-based formula. 10.55 pH.

HYDROFORCE® FOAMING CITRUS CLEANER
Clings to tough stains on vertical or inverted surfaces. Water-based formula is safe on all plastics. 10.9 pH.

WORKPLACE HAND CLEANER TOWELS
Waterless, deep cleaning, and nonscratching 1-step hand cleaner towel. Quickly removes embedded grime. Residue-free.

RLI FOOD GRADE™ CLEANER
Water-based, water soluble detergent is a biodegradable cleaner/degreaser that is safe for food processing plants and environmentally sensitive areas.

CLEAN 2430
Mild pH parts-washing compound and corrosion inhibitor for multi-metal applications.

HYDROFORCE® BUTYL-FREE CLEANER
Water-based formula is safe to use on most plastics. 10.5 to 12.2 pH. Low VOC content.

HYDROFORCE® ZERO VOC CLEANERS
Remove dirt, grease, and oil.10.25 pH. Plastic-safe, water-based formula.

BFX ALL-PURPOSE CLEANER
Dye-free, water-based cleaner is designed to remove dirt, grease, and oil. Not for use on magnesium. 11.8 pH.

LIQUI-SOL™ CLEANERS
CD880 General Purpose Cleaner is safe for metal, finished wood, porcelain, vinyl, leather, and laminated surfaces. CD885 Stainless Steel Cleaner cleans, polishes, brightens, and protects metal surfaces.

TASK 2™ GRIME FIGHTER
Nonbutyl, industrial metalworking surface cleaner can be diluted up to 100:1.

Solvent-Based Degreasers

- Ready to use

Solvent-based degreasers use chemicals to remove petroleum, grease, dirt, and fatty oils.
Scents are stronger than natural-based cleaners.

Electrical Contact Cleaners Information

Plastic Compatibility

Safe on All Plastics indicates safe for use on plastic housings without damage.

Safe on Most Plastics designates safe on most plastic housings without cracking or damage. Testing cleaner for compatibility before use is recommended.

Dielectric Strength Range

Dielectric strength is the maximum voltage an insulator can withstand before breaking down and allowing electric current through if contacts are energized before cleaner evaporates. The higher the dielectric strength level, the greater the insulation against sparks, current breakthrough, or electrical shorts. When power can't be disconnected, look for cleaners with the highest dielectric strengths.

National Sanitation Foundation (NSF) International manages a voluntary registration program for nonfood compounds and proprietary substances that provides specific ratings to help food processing operations understand where certain products should and should not be used.

NSF RATINGS, CATEGORIES, AND INTENDED USE

K1: Solvent Cleaners - Cleaning/Degreasing Solvents for Use in Nonprocessing Areas

K2: Solvent Cleaners - Cleaning/Degreasing Solvents for Electronic Instruments

P1: Solvent Cleaners - Cleaning/Degreasing Solvents for Use in Nonprocessing Areas (Includes lubricants, cleaners, and coatings)

Electrical Contact Cleaners

- Ready to use liquid

Contact cleaners remove dust, dirt, oil, flux residue, and other contaminants from sensitive electronics and electrical components without excessive scrubbing or wiping. These fast-drying cleaners improve conductivity by removing contaminants from the energized surfaces of electronic components, devices, and equipment.

Plastic-safe contact cleaners eliminate any incompatibility with plastic components or rubber gaskets that house or surround sensitive electronics or electrical components. These precision electrical contact cleaners remove dust, dirt, oil, and other contaminants without damaging plastic, rubber, or conductive surfaces. Safe for most plastics. Test for compatibility before use.

Aerosol Dusters

- Aerosol can
- Ready to use liquid

These compressed air cans shoot a powerful stream of air to remove surface contaminants including dust, dirt, and debris from sensitive equipment including computer keyboards, test instruments, circuit boards, and machinery. Air is nonabrasive and evaporates quickly without leaving any residue.

Container Size	Recommended For	Brand	Item No.

Freeze Sprays

- Safe on all plastics
- Nonflammable
- 0% VOC content
- Trigger spray can
- Ready to use liquid

Sprays are aerosol coolants that emit icy cold air to instantly dissipate heat and cool circuits. Freezing components helps locate thermal intermittent failures and shorts in computers, electronics, data processing equipment, and testing equipment. Nonabrasive freeze sprays evaporate instantly without any residue.

Multipurpose Greases

CRC®

General Purpose—For bearings and on cables, chains, latches, machinery, open gears, and overhead door tracks.

CITGO

Premium Lithium EP—Lubricates journal and antifriction bearings.

Lithoplex® MP—Helps minimize wear in heavily loaded components. Offers corrosion and oxidation resistance.

Lithoplex® CM and HM—Provide wear protection in construction and mining applications. Polymer-fortified for improved adhesion and water resistance. Lithoplex CM has 3% MoS_2. Lithoplex HM has 5% MoS_2.

Lithoplex® RT—Tacky, moly-free formula provides good adhesion and water resistance.

JET-LUBE®

MP-50™ Moly Paste—Lead-free, water-resistant low-friction grease helps prevent corrosion.

Temp-Guard™—Contains graphite and molybdenum disulfide for low friction and extreme pressure capabilities.

MOBIL™

Mobilith® SHC 220—Lubricates at temperature extremes; rust-, corrosion-, and oxidation-resistant.

Mobillith SHC™—4ZF48 is for extreme pressure applications. 4ZF49 is for grease-lubricated rolling-element bearings in electric motors.

Mobilgrease® XHP 222—Provides lubrication and oxidation stability plus rust, corrosion, and water resistance. Use for automotive, construction, marine applications and farm equipment.

Mobilgrease® XTC—Resists oil separation in high-speed flexible gear and grid coupling applications.

Mobilux® EP 1 and 2—EP 1 can be pumped at low temperatures. EP 2 is recommended for antifriction and plain bearings, bushings, and pins under normal operating conditions.

WD-40® SPECIALIST®

High Temperature—For high-speed bearings in high-temperature applications with heavy mechanical loads.

Extreme Pressure—Offers protection against wear and high loads in heavy-duty applications.

Marine Grade Water Resistant—For moisture and corrosion protection for equipment that's exposed to the damp weather conditions.

B'LASTER

Penetrating Grease—Penetrates rust and corrosion to lubricate and protect metal surfaces. For use in agriculture, construction, mining, and automotive applications.

Heavy-Duty Grease—Protects and lubricates in temperatures up to 500°F. Great for automotive, construction, mining, and farm equipment.

Waterproof Marine Grease—Provides protection, even with extended exposure to saltwater and saltwater mist.

Extra-Tacky Red Grease—Provides anti-wear and extreme pressure protection, in temperatures up to 550°. Rust- and -corrosion resistant.

Pro-Grade Multipurpose Grease—Water-resistant formula provides lubrication under moderate loads. Protects against rust and corrosion.

SUPER LUBE®

O-Ring Silicone Grease—For lubricating, sealing, and conditioning O-rings and other regulator and valve system components.

Food Grade Multipurpose Greases

CRC®

Greases—4JB56 is formulated on a premium aluminum complex base. 12G584 has a smooth, buttery texture and is a premium-grade aluminum complex grease. 12G587 is plastic-safe and particularly useful in high-temperature applications. Extreme Duty 12G591 is a plastic-safe grease with excellent water-washout resistance.

JET-LUBE®

FMG™—Food Machine Grease is formulated for a wide variety of operating conditions, with extreme water resistance to stay in place even after frequent washdowns. Polymer additives provide adhesive and cohesive strength to resist pound-out under shock loads. It is recommended to lubricate all types of bearings in food processing machinery.

MOBIL™

Mobilgrease™ FM 222—High-performance multipurpose formula is designed to lubricate food processing machinery in varied environments, from oven to freezer operations, and over a wide range of speeds and loads. The grease withstands periodic washdown and cleaning operations, with excellent water resistance and rust inhibition and good protection against wear and shock loads.

PETROCHEM® FOODSAFE®

PETRO-GARD® FMG-2—Formulated with special additives selected to provide excellent water, oxidation, and corrosion resistance, plus corrosion prevention and excellent antiwear and extreme-pressure (EP) properties. The product stays in place between washdown cycles to help boost equipment and lubricant life in wet conditions.

SYN GEL FG-750—High-temperature gel grease seals bearings against water and other contaminants and provides corrosion protection. It remains stable under high shear and high temperatures, and will not melt, drip, carbonize, or emulsify. The lubricant is highly water-resistant and performs exceptionally well in wet applications.

STA-LUBE®

Super White™ Multipurpose—High-purity greases provide superior performance in any weather and most temperatures. Bright white color is great where appearance is important.

SUPER-LUBE®

Multipurpose Grease with Syncolon® PTFE—Heavy-duty lubricant is made with proprietary Syncolon PTFE micropowders combined with synthetic base fluids for longer lasting protection against friction, wear, rust, and corrosion. Designed to help reduce downtime, increase productivity, and extend machinery life. The formula has good mechanical stability, won't melt or separate, and does not evaporate or form gummy deposits.

Silicone Lubricating Compound with Syncolon® PTFE—Synthetic grease offers excellent water protection and moisture barrier over a wider operating range than petroleum-based lubes. It's good for plastic gears and threads and as a damping medium for dash pots. Also lubricates O-rings, electrical motor and slow-speed bearings, brake parts, weather stripping, trunk seals, speedometer cables, window channels, hood strips, pads, rubber gaskets, and other rubber components.

TRI-FLOW®

Synthetic Grease with PTFE—Compatible with most rubbers and plastics; excellent for O-rings. Nonstaining and waterproof. Pure synthetic provides added durability and performance.

Bearing Grease

- Grease container: Cartridge

MOBIL™

Polyrex™ EM—Super-premium grease is formulated for electric-motor bearings, particularly vertically mounted bearings or very large motors that may require stiffer grease consistency.

LPS® THERMAPLEX®

Multipurpose—For use as a high-performance, multifunctional bearing grease in general purpose applications.

Hi-Temp—Resists carbonization, vibration, and bearing failure. Extends relubrication intervals. Excellent resistance.

Hi-Load—Provides long-lasting lubrication for bearings subjected to shock loading and vibration. Offers antiwear properties and corrosion resistance.

Aqua—Provides long-lasting lubrication even when fully submerged in fresh or salt water.

FoodLube—Nonstaining, nonemulsifying formula for use in food processing and other clean industries.

CS Moly—Calcium sulfonate formula with molybdenum disulfide for high load carrying capacity. Reduces wear from vibration. Water- and corrosion-resistant.

JET-LUBE®

EP—Bearing grease contains an extreme-pressure additive that enhances shear stability in high temperatures.

STA-LUBE®

Sta-Plex™ Extreme Pressure Grease—Multipurpose, lithium complex formula contains extreme pressure, anti-oxidation, and anti-wear additives. For high temperature applications and for use in ball and roller bearings and in assembly/machining equipment.

Dielectric Grease

CRC® Dielectric Grease—Food-grade noncuring silicone compound waterproofs electrical connections and components to protect against arcing. 2F136 features Perma-Lock® integrated actuator that will not detach.

Jet-Lube® Silicone Compound DM™—Moisture-proofing sealant and lubricant's low volatility, inert properties, and high dielectric strength are good for use on a wide range of elastomers and plastics. It can serve as a lubricant, sealant, or chemical barrier coating for valves, O-rings, stuffing boxes, and vacuum and pressure systems; great to insulate electrical connectors against the elements.

Jet-Lube® MP (Moisture-Proofing) Silicone Grease™—Nonconductive premium moistureproofing lubricant is useful in a wide variety of applications, and a great insulator to protect electrical connectors against the elements. It is excellent on marine, automotive, and aircraft ignition systems, as well as electrical assemblies, cable and spark plug connections, and battery terminals. The formula is designed for compatibility with O-ring materials including Buna-N, Viton® FKM, HSN (hydrogenated nitrile), Teflon® PTFE, and nylon.

Loctite® LB 8801 Silicone Lubricant—Noncuring. Seals, waterproofs, and electrically insulates metal, rubber, and plastic parts. Can also be used as a mold release agent.

Super-Lube® H1 Food Rated Dielectric Grease—Noncuring synthetic compound lubricates, seals, and protects electrical components and connectors including battery cables, spark plugs, distributor caps, terminal strips and disconnects, and cable connections. Compatible with most plastics and rubber, it helps moistureproof and insulate electrical connections, offers corrosion prevention, and helps keep contaminants out.

Super-Lube® H1 Food Grade Multipurpose Grease—PTFE-based formula provides friction, wear, rust, and corrosion protection. This grease will not run, drip, melt or separate.

Aerosol Spray Multipurpose Greases

CRC

Red Grease—Aluminum complex-based formula prevents rust, corrosion, and oxidation; maintains lubricity at extremely high temperatures. Long-lasting waterproof film resists acids, alkalis, salt, weather, and steam.

Food Grade White Grease—Features Perma-Lock integrated actuator. Formulated for high-load applications requiring long grease life. Protects against wear, rust, and oxidation.

White Lithium Grease—Formula offers superior lubrication and durability in any weather. An excellent bearing break-in lube and a general purpose lube and corrosion inhibitor for tools, machinery, equipment, guide rails/tracks, hinges, latches, chains, and cables.

Heavy-Duty Clear Penetrating Grease—High-tack gel resists throwoff and water washout. Forms a thick, long-lasting waterproof film that resists acids, alkalis, salt, oxidation, weather, and steam.

LPS

White Lithium with PTFE—Ultra-white lithium-based aerosol grease has PTFE additives for superior lubricity.

Red and Redi—Bentonite clay-based grease offers high temperature performance and corrosion resistance.

SPRAYON

LU 100 White Lithium Grease—High-solids, nonmelting formula provides excellent metal-to-metal lubrication and is an excellent corrosion inhibitor for unpainted metal. The spray-on grease features great cling for overhead applications.

TRI-FLOW

Synthetic Grease with PTFE—Premium formula is nonstaining and helps prevent corrosion on gaskets, O-rings, conveyors, sterilizer chains, slides, pool equipment, electric motors, water filters, and universal joints.

WD-40 SPECIALIST

Protective White Lithium Grease—Liquid formulation sprays on evenly, then sets dry to form a thick, nonmelting coating that's great for metal-to-metal applications where heavy-duty lubrication and protection against rust and corrosion are required. Long-lasting, freeze-resistant lube won't run off in any weather. Good for outdoor and indoor applications, and on equipment being prepared for storage.

B'LASTER

Food-Grade White Spray Grease—Clean, low-odor grease protects against rust, moisture and oxidation in a range of applications, including food processing and food handling. Formulated for heavy-load applications. NSF H1 registered.

Penetrating Lithium Grease—Time-release formula penetrates existing rust and corrosion and provides long-lasting lubrication and surface protection. Great for restoration projects and various agriculture, construction, and automotive applications.

White Lithium Multipurpose Grease— Low-friction lubrication creates a protective barrier, protecting against moisture and oxidation. Grease helps keep surfaces lubricated in extreme temperatures.

ExxonMobil

Gear Oils

MINERAL

Mobiltac™ MM

Non-diluent formula features extreme pressure additives, providing protection of gear teeth and metal surfaces subject to extremely heavy loads. Oil forms a cohesive and adhesive lubricating film that resists wear, water wash, and excessive "throw off." For use in applications such as open gears, hoist gears, swing gears, and large press gears.

Mobilgear™ 600 XP

Provide heightened protection against micropitting, debris denting, and bearing wear in enclosed gear drives with circulation or splash lubrication systems.

Mobil™ 600 W Super

High-performance, high-viscosity oil is designed for use in enclosed worm gears operating at moderate to high speeds and temperatures. Provides good sealing film around rods and in glands in steam applications. Resists deposit formation. Excellent antiwear and low friction properties.

SYNTHETIC

Mobil SHC™ 600

Provide equipment protection at high and low temperatures, allowing peak productivity performance. Formulated for oxidation stability, corrosion and rust prevention. High performing oil in water separability, foam control, and air release. Run 20% cooler than conventional oil, limiting power consumption and reducing maintenance cost. For use in enclosed gears, speed and gear reducers, and plain and roller bearings.

H1 RATED

Mobil SHC Cibus™ Series—Food-grade synthetic oils feature high viscosity and load carrying capability, excellent oxidation stability and water separation, good seal compatibility and corrosion protection, and low traction coefficient.

Petrochem® Foodsafe FG Series—Semisynthetic gear lubricant for gearboxes operating under low and high temperatures.

Petrochem® Foodsafe Gearsyn FGG Series—For gearboxes and enclosed gears under low or high temperatures and humidity. Provides a protective antirust film for gaskets or seals of tank closures.

H2 RATED

Petrochem® Gearsyn EP 220—Ideal for heavily loaded low-speed gears and bearings with boundary or elasto-hydrodynamic lubrication conditions such as in mine hoist gear reducers. Also for gearboxes which operate under excessively high temperatures.

Renewable Lubricants™ Bio-Food Grade™—For gear drives and right-angle gear drives.

Hydraulic and Circulating Oils

HYDRAULIC OILS

DTE™ 24, 25, and 26—Antiwear industrial oils meet the requirements of all conventional and high-output hydraulic systems. Operate in a wide range of temperatures while handling heavy loads. For hand- and power-operated jacks, scissor jacks, and hand pumps.

DTE 10 Excel™— Excellent keep-clean, antiwear performance and deposit control. Nonzinc formula is compatible with zinc-containing hydraulic fluids. Excellent protection against rust. Controlled demulsibility to work with small amounts of water and separate out large quantities. Multimetal compatibility.

EAL 224H—Recommended for most hydraulic systems requiring readily biodegradable, nontoxic fluids.

Aero™ HFA—For aircraft systems that require hydrocarbon-based hydraulic fluids. Features high viscosity index with excellent low-temperature properties and good chemical and oxidation stability.

CIRCULATING OILS

DTE™ Light, Medium, Heavy Medium, and Heavy—Contain oxidation inhibitors to resist thermal degradation and defoamants to ensure entrained air is released. Demulsibility permits water and other contaminants to separate. For bearings, gears, hydraulics, selected vacuum pumps, and air compressors.

DTE™ Extra Heavy— Formulated for extremely high chemical and thermal stability, rapid and complete separation from water, and high resistance to emulsification. For steam and hydro turbines, including geared turbines.

Machine Maintenance Oils

ExxonMobil

Way Oils—Dual-purpose hydraulic and way oils are recommended when extreme precision or slow speeds make it necessary to eliminate stick-slip or chatter. Approved by major machine tool builders such as Cincinnati Milacron, Okuma, and Bijur. Minimize wear. Good coolant separability extends oil life.

Spindle Oils—Light-bodied, light-colored oils offer long service life and excellent antifoam and rust protection. Resist oxidation and deposit formation. For high-speed spindle, plain, and antifriction bearings in textile machines, precision grinders, and other machine tools. Effective lubrication at high speeds. Approved against Cincinnati Milacron P specifications.

Air Line Lubricant
40P263

Super Lube® Petrochem FOODSAFE® SUPPLIER DIVERSITY

Food Grade Air Tool/Air Line Oil and Lubricants

- NSF 1 Rated

Air Tool Pneumatic Lubricant—Oil's blended rust and corrosion inhibitors and a synthetic base fluid absorb water and minimize ice buildup and frost in air tools; reduce wear and allow operation in temperatures as low as -40°F.

Air Line Lubricants—For pneumatic equipment and air-operated tools in food, beverage, and packing operations. 40P261 is for medium equipment and handheld tools. 40P263 is for large equipment and jackhammers.

ExxonMobil

Vacuum Pump Oil

Nondetergent straight mineral oil with low vapor pressure. Recommended for high-vacuum applications (0.08 Hg max. microns). Suitable for use with Busch, Leybold, Gast, Pneumotive, and Welch pumps.

ISO Viscosity Grade	Container Size	Container Type	Mfr. Model	Item No.
68	1 qt	Bottle	123027	**4ZF23**

DETEX® Spray Bottle

Empty trigger spray bottle with DETEX® metal and x-ray detectable plastic components provides convenient delivery of bulk-packaged cleaners, degreasers, and lubricants. Adjustable spray stream ensures proper application.

Container Size	Mfr. Model	Item No.
28 oz	57928	**29FX95**

Precision Spout Oiler

Flexible telescoping spout can reach up to 13" to lubricate hard-to-reach areas. Nondetergent SAE 10 turbine-grade oil for use on rotating and reciprocating motors, bearings, slides, and other equipment.

Container Size	Container Type	Mfr. Model	Item No.
4 oz	Bottle	79704	**4NA76**

Food Grade Machinery Oils

- NSF H1 Rated

CRC®—General-purpose lubricant is silicone-free, virtually odorless, and colorless. Will not harm metal, wood, plastic, or painted surfaces. Zero VOC. The Perma-Lock® integrated actuator will not detach.

LPS® with DETEX®—Features metal-detectable plastic components with DETEX®. Colorless, odorless, nonstaining oil loosens nuts and bolts and lubricates to reduce sticking, binding, and squeaking on bottling equipment, conveyors, food service racks, slicers, and other equipment. Safe on most surfaces. Silicone- free and VOC-free. No chlorinated solvents.

Sprayon® LU™700 Oil—Silicone-free lubricant loosens corrosion.

Tri-Flow™ Synthetic Oil with PTFE—Nonstaining oil does not emulsify in water.

Hand-Applied Metalworking Lubricants

Tapmatic® Edge Lube—Biodegradable bar is packaged in a cylinder for rotating or stationary cutting tools. Excellent for sawing applications, eliminating heat buildup and belt loading. Low toxicity. Compatible with oil and water systems. Safe on all metals.

Tapmatic® Edge Creme—Biodegradable paste cutting fluid can be applied to tools before tapping or reaming. Use when drilling, tapping blind holes, forming, bending, precoating fasteners, and lubricating rubber seals.

Gel Paste—Vegetable-based gel lubricant with workable texture for taps, drills, and cutting tools. Safe for ferrous and non-ferrous metals. A1 and T1.

Stick Lubricants—Designed to reduce heat buildup in belt, disc, or wheel grinding operations.

Metalworking MQL Lubricants

Formulated to apply in very small quantities for near-dry machining, avoiding heat buildup, and reducing tool wear. Minimum Quantity Lubrication (MQL) technology is designed as a cleaner, less costly alternative to flood and mist coolant practices. MQL dispensing applicator systems are sold separately; see page 2461.

OIL-BASED

MQL™1000—Vegetable-based ester fluid is compatible with all microlube and micromist systems. Helps control buildup edge and sliding friction.

BIODEGRADABLE

FG-2000—Superior food-grade formula with nonchlorinated EP additives for moderate to heavy near-dry machining.

LB-2000—Great for sawing solids up to 6" dia. Fluid wiill not discolor parts.

LB-3000—Designed for medium-duty machining.

LB-5000—Light-viscosity lubricant will not stain during post-heat treating. Designed for medium machining on aluminum that requires post-heat treating.

SYNTHETIC

Multipurpose—Water-based formula with nonchlorinated extreme-pressure (EP) additives for moderate-duty machining, sawing, and cutting. It provides rapid heat dissipation.

Water-Soluble and Biodegradable Cutting Fluids

TrueTap® Aqua—Nonaerosol fluid offers excellent cooling and lubrication for tap and drill applications. It is formulated as a replacement for solvent- or oil-based fluids.

Tapmatic® AquaCut—Water-based fluid is compatible with steel, aluminum, and most other metals, except magnesium. Corrosion inhibitors prevent flash rusting. Nonflammable.

Formula 1 Aqueous—EP-X3® additive gives performance boost. Proprietary water base in Aqueous is noncorrosive.

LB-2000—Environmentally safe oil is hand-applied for drilling, tapping, and reaming. Safe for all metals.

Tapmatic® Natural—Nontoxic, nonhazardous formula eliminates galling and seizing. Fluid does not contain sulfur, chlorine, chlorinated solvents, water, mineral oil, or inactive fillers.

Bio-General Purpose™ Cut 40—Light- to medium-duty oil is formulated to reduce smoke and mist.

Bio-SynXtra™—Heavy-duty oil reduces smoke and mist.

Bio-Mist™ EP—Extreme-pressure lube for misting cutting tools working nonferrous metals, ferrous alloys, mild steel, and cast iron.

Eco-Oil—Natural oil base resists smoking and fuming.

ProTap—Formula is free of all regulated chemicals. Highly effective on all metals.

Oil-Based and Synthetic Cutting Fluids

OIL-BASED

Cutting Oil—Thread-cutting lubricant for use on all types of ferrous and nonferrous metals. Sulfur-free, low-odor formula.

TrueTap® HD—For heavy-duty use in severe applications. Use to tap, thread, drill, saw, shear, turn, and ream metal parts, pipes, conduit, screws, housings, aluminum sheets, stainless steel and exotic metals.

Tapmatic® #1 Gold—Protects and lubricates, reducing friction and eliminating chip welding. Safe to use on all metals.

Tapmatic® TriCut®—For hard-to-machine metals.

Mobilcut™ 100—Mixes with different waters to form stable emulsions for cutting and grinding operations.

MobilMet® 426—Automatic operation on materials with a Brinell hardness up to 300.

MobilMet® 766—For tapping, threading, milling, gear shaving and shaping, broaching, planing, parting-off, and automatic lathe.

LU™ 208—Friction-reducing triglycerides offers fluid film protection in all ferrous/nonferrous machining applications.

Aluminum—For use on aluminum.

EP-Xtra®—Yields microfine finish while preventing rust and corrosion.

Xtra-Thick®—Fluid clings to the workpiece to stay in place during high-speed rotation.

Xtra-Foamy®—Allows gauging of application rate and fluid presence.

Trim® Tap Heavy—For taps ½" dia. and smaller and helps reduce rubbing of tool flank.

Trim® OM 287—Low odor oil for removing metal. Will not stain and has a lower viscosity, allowing for better cooling.

Trim® Tap Light—For taps ¼" dia. and smaller and helps reduce rubbing of tool flank.

SEMISYNTHETIC

Trim® MicroSol® 585XT—Nonchlorinated formula helps extend sump life. For machining, grinding gray iron, and titanium alloys.

Trim® MicroSol® 685—Microemulsion is compatible with aluminum, magnesium and copper alloys, cast iron, steels, stainless steels, plastics, and composites.

Trim® SC230—Combines synthetic coolant and synthesized oil that helps reject tramp oil and improves sump life. Deliver good flushing action into machine's chip removal system.

Trim® SC620—Low foam and low odor fluid is for machining and grinding.

SYNTHETIC

Trim® MIST—Low-odor fluid works well in cutter/grinder operations.

WATER BASED

Trim® Sol SF—Siloxane free formula helps control edge build-up. Nongumming film protection. Residue is easily removed with water.

Trim® C270CG—Provide corrosion inhibition for tapping and reaming operations without chlorine or sulfur based additives.

Trim® C276—Low foam and mist fluid leaves a soft film protection on bare metal parts of machine tools. Easily washes off with coolant solution.

Machining Coolants

SEMISYNTHETIC

SS-405L—For machining or grinding.

ULTRACUT® 375R—Compatible with CNC machining.

MicroSol® 690XT—Perform in high-pressure applications, offering cooling and mechanical lubricity.

E206—Effective on ferrous and nonferrous metals.

E850—Provide corrosion protection for ferrous and nonferrous metals.

E925—Deliver exceptional surface finish.

SC520—For high-speed milling and turning operations.

VP Series—Resistant to ionic shock and hard water. For high pressure coolant applications.

VP Tech P—High content mineral oil with excellent bio-resistance.

Aerotech B—For use in aluminum machining and steel applications. Resistant to ionic shock and hard water.

VP Tap—For easy cleaning of parts and tools.

SILICONE

Remove oily residue, soap deposits, and scum that reduce coolant life span.

SYNTHETIC

Carbide PowerGrind—Prevent chemical damage to carbide in grinding applications.

G-25J—For Blanchard grinding of cast iron and other ferrous metals.

G-1066D—For diamond wheel grinding and slicing.

PowerSaw—For sawing operations in moderate to heavy-duty application.

PowerChip 2000—Works well in hard-water areas.

SN-100A—Resist bacterial growth, fungal growth, and rancidity.

Vytron N—General-purpose formula prevents rancidity.

C115—For cast iron and mild steels.

C270—Use in form grinding, drilling, tapping, and reaming operations.

C350—Provide corrosion resistance on aerospace aluminum alloys, titanium, Inconel®, brass, and high-strength alloy steels.

VP Series—For moderate and heavy machining.

WATER-SOLUBLE

WS-11 Nonchlorinated—For use on all metals.

WS-5050—Compatible with CNC machining.

ULTRACUT® Aero—For use with aluminum, titanium, stainless steel, Inconel®, and other metals.

ULTRACUT® Pro and Pro CF—ULTRACUT Pro offer resistance to fungus and bacteria. ULTRACUT Pro CF provide maximum bio-resistance.

VP 650P——For use in manual operations where lubrication is required.

K-5-P—Dislodge difficult to reach sludge and containments.

Val-U-Clean—Clean the sump.

WATER-SOLUBLE, BIODEGRADABLE

Bio-Metal Cool™ GP—For use with ferrous and nonferrous metals.

Stumpy Spout Lid G3515

OilSafe

Oil Containers and Pumps

Color-coded system manages lubricants from bulk storage to the correct point of use. Fully interchangeable drums and lids. Pumps deliver 1L per about 12 strokes. Fit 3L, 5L, or 10L drums.

TRICO Accu-Lube

Lubricant Dispensing Systems

SPRAY COOLING SYSTEMS

Portable Spray Unit—Includes 7" flexible nozzle, 60-lb. magnetic base, and a 7-ft. siphon line with a 40-micron stainless steel filter.

1-Qt. Lil-Mister®—Features liquid level gauge and separate air and coolant controls. 5-ft. brass line. Includes mounting bracket and 6" straight brass nozzle. For light-duty machining operations.

1-Gal. Spraymaster®, Needle Valve—Feature liquid level gauge and individual air and coolant controls on the unit. Brass armored lines and straight brass nozzles.

1-Gal. Spraymaster® II, Solenoid—Coolant is delivered in an adjustable spray using independent air and liquid controls. Brass armored delivery lines. 110V. 7" flexible plastic nozzles with controls at the nozzle.

DROP DISPENSERS

Air-operated systems dispense lubricant to cutting tools. Solenoid-equipped model 6Y841 allows for remote shutoff and machine synchronization. Include 18" Loc-Line® nozzles, 6-ft.-long lines, and 16-oz. capacity reservoirs.

LUBRICANTS

Designed for use with Micro-Drop dispensing systems or other microlubrication equipment. (Not intended for mist-coolant systems.) 1-gal. container.

MQL APPLICATORS

Air-operated applicators dispense lubricant to the cutting edge without creating a mist, for near-dry machining and sawing applications. Positive displacement pump with pneumatic timing delivers lube smoothly. Air and liquid flow are easily adjusted. Environmentally safe, minimum-quantity application eliminates hazards from misting. 10-oz. reservoir. Junior Applicators include magnetic base nozzle and magnetic mount. Not for use with synthetic coolants; use MQL Lubricants,

ABANAKI OIL SKIMMERS

Oil Skimmers

These skimmers are for removing oil from the surface of coolant or water. Ideal for machining centers, parts washers, and sumps.

DISK SKIMMERS

Remove up to 1½ gph. Boomerang blades wipe more oil. 110V, 1-phase, 60 Hz motor. 12" disk.

3AU32—Housing and frame are made of polymer.

3EJF5—Housing and frame are made of carbon steel.

TUBE SKIMMERS

6KYV8—Oil Viper is the highest capacity industrial tube skimmer. It removes up to 100 gph using a ¾"-dia. tube that floats on the surface of the water to collect oil. 360° wiper cleans tube completely. Carbon steel construction. 110/220V, 1-phase, ⅓ HP, 60 Hz motor. Tubes 6KYV9 through 6KYW3 sold separately, see Grainger.com.

TubeTastic!™—Light capacity, ⅜"-dia. tube collects up to 1½ gph. Mounts to side of tank. 110V, 1-phase, 60 Hz motor. Tubes 1MEC2 thru 1MEC6 sold separately, see Grainger.com.

BELT SKIMMERS

3BU53 through 3BU56—Collect up to 1 gph. Made of polymer. Include 1" wide elastomer belt. 110V, 1-phase, 60 Hz motor.

29UJ11 through 29UJ14—Collect up to 1 gph. Include 1"W synthetic belt. Motor can use 110V outlet or can be directly wired to 12/24V power.

6Y757 through 6Y760 —For use in coolant sumps and parts washers. Include 1"W stainless steel belt and 24-hr. timer. 110V, 1-phase, 60 Hz motor. 3-ft. discharge hose. Can be used with Decanter 6Y756, sold separately.

6Y752 and 6Y753—Remove up to 6 gph. For use in larger coolant sumps and parts washers. Include 2" wide stainless steel belt. Housing and frame are made of polymer. 110V, 1-phase, 60 Hz motor.

MAGNET-MOUNT OIL SEPARATOR

Pumps oil-laden coolant through a filter media chamber which traps debris and tramp oil. The oil is drained away and clean coolant is continuously returned to the coolant sump. Operates at 2.8 gpm. Requires Electric pump and float 45AP80 or Pneumatic pump float 45AP81, sold separately.

ACCESSORIES

6KYV5 has a 0% to 32% Brix range.

6KYV6 has 0% to 10% Brix range.

6KYV7 has a 0 to 14 pH range.

TRICO

Opto-Matic Constant Level—Zinc-cast construction with zinc plating. Feature adjustable level setting, multiple air vent slots, and side and bottom ports. ¼" pipe thread connection.

Opto-Matic Closed System—Features adjustable level setting, aluminum body, and glass reservoir. Can be installed on rotating equipment using a ¼" NPT connection port. A pressure balancing line is user-installed between the oiler and the housing to ensure correct operation.

Watchdog—Integral sight glass allows instant viewing of the oil level in the housing. Oiler is installed on the centerline of the desired oil level; no adjustments are needed. Mounts on rotating equipment using the 1" NPT viewport on a bearing housing or gearbox. Metal body, glass reservoir. Includes wire guard.

Wire Guards—Use these guards with Opto-Matic oilers.

LDI INDUSTRIES

Air/Oil Reservoir—Converts shop air into low-pressure hydraulic power. Max. operating pressure: base mount up to 80 psi. Fluid outlet is ⅜" NPTF. Air inlet is ¼" NPTF for base mount.

Full Flow Electric Reservoir—Can be connected in series to valve or valve brushes. Closed solenoid provides automatic On/Off and fluid control.

Electric Chain Oiler Reservoirs—Adjustable needle valves set drip feed rate. For automatic operation, wire normally closed solenoid across machine starting switch. Feeding stops when machine is turned off. Include 1.5" x 0.38" nylon brush.

Desiccant Breathers

TRICO LDI Industries

- Max. operating temp.: 200°F
- ABS plastic/acrylic construction

Protect and extend service life of industrial equipment by keeping damaging moisture and particulate contamination out. Use silica gel technology to adsorb moisture inside equipment with a color indicator to show when replacement is needed. Dual, antistatic 2 micron filter system collects airborne particulates to reduce sludge buildup in the fluid reservoir.

PRESSURE/VACUUM BREATHER

Allows excess pressure to vent as heat builds up in sealed pressure systems. 20 micron bronze filter. Steel body with aluminum top cap. Buna N seals.

TRICO

Automatic Lubrication Pumps

Electric pumps provide automatic and reliable lubrication. For use on milling machines, injection molding machines, punch presses, and many types of industrial equipment. 110V standard. 5JG49 has digital control for time intervals and amount of lubrication per cycle.

Container Size	Output	Interval Time Between Cycles	Mfr. Model	Item No.
2 L	3-6 cc Per Cycle, Adjustable	5 min Min.	PE-1202-05	**5JG44**
		10 min Min.	PE-1202-10	**5JG45**

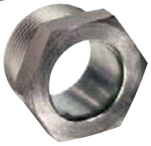
		30 min Min.	PE-1202-30	**5JG47**
		60 min Min.	PE-1202-60	**5JG48**
3 L	3.33 cc per Second, Variable Delivery Time of 1-999 Seconds	Adjustable	PE-3003	**5JG49**

Low Pressure 1U915



High Pressure 1U926

Liquid Level Sight Plugs/Checks

Can be used as an observation window to check burner flames, gears in motion, and relay or switch operation in sealed housings. Allow visual inspection of fluid levels in gear boxes or reservoirs. Low-pressure sight plugs feature stainless steel reflector to aid viewing of dark fluids. Solid brass body, clear glass sight, and Buna N seals. High-pressure sight plugs have a fused heavy glass window. Steel body with electroless nickel plating. Open view (no reflector).

Note: Not intended for steam applications.

Closed-Circuit Front-Mount Liquid Level Gages

- Aluminum construction with Buna N seals

PIPE ADAPTERS

¼" NPTF brass pipe adapters for mounting in heavy-wall tank or weld spuds on reservoir walls. Borosilicate sight glass with red line on white background.

DIAL THERMOMETERS

Dial probe thermometer series gage features highly accurate protected sensing element. Stainless steel dial thermometer: 1⅜" dia., 50° to 300°F. ½-20 UNF thread. Borosilicate sight glass with red line on white background.

RIGID PLASTIC SIGHTS

Provides wide-angle viewing through tough, break-resistant transparent cylindrical nylon sight. ½-20 UNF thread.

NEEDLE VALVES

Gage body may be removed from valves without loss of fluid. Features brass shut-off valves, ½" NPTF thread. Borosilicate sight glass with red line on white background.

Flow Sights

- Brass construction with Buna N seals

Can be used in vertical or horizontal fluid lines to observe fluid flow, condition, or clarity. Borosilicate glass sight window. Female x female PTF. Models with nylon ball indicator aid viewing of dark fluids in dim light conditions.

Inline Double Window 1U892

Wide View 1U903

Vented Oil Gages

- Brass construction with Buna N seals

Gages provide quick, visual inspection of fluid levels in gear boxes and bearing housings. Protective gage shield rotates for optimum viewing. Glass sight. Short and long elbow gages may be disassembled on site, elbow alone installed, and gage reassembled. Union coupling gages provide a convenient break point.

Vents

FILTER VENTS

Relieve excessive pressure from gear-boxes. 40 micron filter element. Steel and zinc construction.

1U568

PROTECTED VENTS

Provide a labyrinth air path to restrict direct entry of dirt and moisture to reservoir or gearbox. Aluminum construction.

RELIEF/FILLER VENT PLUGS

Dual-purpose relief or filler vent plugs can be used for gearbox housings and bearings to eliminate excessive pressure. Automatic reset for continuous duty. Plated steel and brass construction.

LubeSite® WESTWARD® Grease Feeders

Mount in any position. Spring tension 1 to 2 psi; ⅛" NPT. Include extra light and heavy springs. Activation is immediate and can be used with any NLGI 0 to 4 nonseparating grease.

6Y735

Polycarbonate—Use all-polycarbonate for minimal vibration operating conditions. Units with metal base are for dynamic and vibrating conditions. Units with corrosion-resistant metal base can be used in chemical and food processing.

- Temp. range: -10° to 250°F

High Temperature—Borosilicate glass, stainless steel cap, and temperature-resistant Viton® seal construction.

- Temp. range: -10° to 450°F

Lubeline™ Remote Grease Refill Kit—Allows refill of hard-to-reach sites. Works with all polycarbonate and high temperature grease feeder models.

Grease Dispensers TRICO

Microprocessor-controlled, prefilled dispensers apply a precise flow of grease to critical machine parts. Easy-to-read LCD.

1YMX8

Streamliner® V—Ideal for industries where high moisture, accelerated temperatures, and other contaminants are present. Operating pressure of 80 psi. 6 variable dispensing rates: 1, 2, 3, 6, or 12 mo., and purge.

Streamliner® M—Antivibration, break-free design allows unit to be deactivated and adjusted as necessary. High operating pressure of 280 psi. Up to 8-point lubrication capability. 6 variable dispensing rates: ½, 1, 2, 3, 6, or 12 mo. Service packs with grease pouch, battery pack, and cover sold separately.

LDI Industries® Reservoirs

- Aluminum construction and Buna N seals
- Max. temp: 140°F for polymer bowls, 180°F for borosilicate glass bowls (except RDF Series)
- Ratings at atmospheric pressure (except where noted)

Break-resistant, transparent polymer bowl allows full 360° view of fluid. 1U623, 1U669, and 1U671 have borosilicate glass bowl, enhancing fluid compatibility and thermal shock resistance. RDB300, R100, RDF, and RFF100 Series disassembles for cleaning.

RDB300 Series Manual Control Chain Oilers—Visible drip rate. On/Off toggles do not affect previously set feed rate. 1.5" x 0.38" nylon bristle brush can be trimmed.

- Max. temp.: 250°F for nylon brushes

R100 Series Gravity Feed Reservoirs without Flow Control—For use as makeup or replenishing reservoirs. Self-closing snap lid filler caps.

RCL Series Constant Level Reservoir—Automatically maintains oil levels in bearing, pump, or gear housings. Large surge capacity. Bottom outlet can be used as drain. Side or bottom mount.

- ⅛" PTF air vent
- ½" NPTF outlet

RDF Series Drop Feed Reservoirs—Dispense oil by gravity from reservoir bowl through adjustable needle valve. Feature vented sight chamber, adjustable metering, toggle shutoff, and self-closing filler cap.

- 1500 SSU max. viscosity
- Pipe thread/NPTF, except 1U680 is straight thread/remote mount
- Fluid temp.: 250°F for glass bowl

REO Series
1U669

REM Series Multiple Feed Electro Reservoir—Automatically controls full flow of lubrication from a single reservoir to 2 locations. Adjustable needle valve controls drip feed rate.

- 120V/60 Hz, 1-phase solenoid
- Class B molded water-resistant coil

REO Series Automatic Solenoid-Controlled Lubricators—Provide controlled lubrication through a needle valve.

- 120V/60 Hz, 1-phase solenoid
- Class B molded water-resistant coil

RFF100 Series Full Flow Dispensers—Use as central dispensers for lubrication systems. Oil can be shut off manually. Vented, self-closing snap lid filler cap.

RVP Series Air-Operated Reservoir—Allows accurate spray pattern adjustment while applying lubricants.

- 40-micron filter
- ¼" NPTF air inlet/outlet
- ⅛" NPTF oil to valve
- Max. inlet unregulated air pressure: 125 psi
- Max. regulated air and fluid pressure: 30 psi

WESTWARD®

Industrial-Duty Bottle Jacks

- Steel construction
- Blue enamel, air-dry finish
- Include handle

Protects hydraulic system from over pumping. Hard cast iron steel construction and heat-treated extension screw saddles on 2- to 20-ton models. Precision-machined release valves provide positive load control on jack descent. Wide base provides better stability and strength.

Hand and Foot Pumps

Steel construction, except where indicated. 2-speed models have high flow at low pressure and low flow at higher pressure. All units are shipped with oil.

Lightweight—Designed with handle lock and for easy portability. Durable glass-filled nylon reservoir, nylon encapsulated aluminum pump base for maximum corrosion resistance, and an internal pressure relief valve for overload protection. 46C563 has integral 4-way valve for operating the double-acting cylinders.

Ultima Series Steel—Pumps operate with reduced handle effort and an ergonomic grip for less operator fatigue. Vent-free reservoir eliminates spills and integral reservoir over pressurization protection. The quick grip handle allows for easy transport.

Low-Pressure—Feature external load-release valve, and internal pressure-relief valve for overload protection. 46C557 and 46C560 pump oil both forward and reverse handle movement, improving overall efficiency. Ideal where mounting space is restricted. 46C561 can be operated in horizontal and vertical position with pump head and oil outlet facing downwards.

Ultra-High Pressure—Allows for a faster fill and reduced cycling time. Feature a large release knob that allows improved control of pressure release. Aluminum construction, except for ultra-high pressure stainless steel fittings.

Hydraulic Foot Pump—Compact unit is lightweight composite construction, with steel frame, internal pressure relief valve, and large foot-pad release for controlled return. Foot pedal lock allows for greater portability.

Repair Kits—1ANV4 includes screen and all related balls, washers, O-rings, gaskets, retaining rings, and pins. 1ANV5 includes filter assembly, screen, inlet adapter, and all related O-rings, balls, washers, gaskets, and springs.

Electric Pumps

ENERPAC

- 115VAC, 50/60 Hz
- ⅜" NPT fluid port

Universal motor, except 6BU67 has induction-type motor.

Portable—2-speed operation. Pumps start under full load. Designed for intermittent duty-cycle. 26VY57 is double-acting.

Z-Class—Heavy-duty bearings with steel reservoirs. 6BU67 includes low-voltage pendant with sealed switches. Designed for extended cycle applications of more than 1 hr. 6BU65 and 6BU66 are designed for intermittent use under 1 hr. 26VY45 features backlit LCD with built-in hour meter and diagnostics.

Air Pumps

ENERPAC

- Max. pressure: 10,000 psi
- ¼" NPT air inlet
- ⅜" NPT fluid port
- Include swivel air coupling on air intake port

Turbo II—Pumps start at extremely low pressure. Reinforced HD reservoir. 76 dBA.

Hand- or Foot-Operated—3-position treadle for cylinder advance/hold/retract. Can be used in all positions. 4Z482 includes built-in carrying handle and base mounting slots.

Z-Class Pump—High-efficiency 2-speed pump offers higher oil flow, higher bypass pressure, and a larger-capacity oil reservoir with sight gauge. Includes carrying handle and manual valve.

XA-Class Foot-Operated—2-pedal design features variable air flow and fine metering, with high oil flow. Externally adjustable pressure valve. Pedal locks. Include ground screw for improved ATEX explosion safety.

Air Hydraulic Work Holding Pumps

- Operating air: 50 to 125 psi
- Cap.: 1250 to 5000 psi
- Air inlet: ¼" (F)NPT
- Hydraulic-to-air ratio: 45:1 (3000 series); 60:1 (5000 series)

Pumps have on-demand stall-restart operation and generate hydraulic pressure by using air pressure. Feature adjustable pressure relief valves. D03 valves are required for proper operation; sold separately at Grainger.com®. Swing and Threaded Body Cylinders are available on Grainger.com®.

Cordless Hydraulic Pump

ENERPAC

- Max. pressure: 10,000 psi
- ½ HP

Portable hand pump with powerful 28V lithium-ion battery delivers exceptional speed and run time. Bladder reservoir helps prevent contamination and allows pump usage in any position. Features directional control valve, safety lock, and On/Off switch. Use in remote locations without access to power or indoors where trip hazards are a concern. Includes built-in handle, charger, 2 batteries, and carrying strap. Compatible with all Enerpac® hydraulic tools and small to medium cylinders.

Standard Hydraulic Rams

ENERPAC WESTWARD

4Z485

4PU62

3KD55

Extreme Environment Rams—Nickel-plated to resist corrosion in extreme environments. Viton seals are heat- and chemical-resistant.

General Purpose Rams—They have a maximum working pressure of 10,000 psi.

High Cycle Rams—Mounting configurations allow them to be attached to fixtures.

Lightweight Rams—Made of aluminum so they weigh less than standard steel hydraulic rams, making them more portable and easier to transport.

Low Profile Rams—Feature low height when fully retracted, allowing them to be used in tight or confined spaces.

Low Profile Hand Jacks—Feature an integrated pump and handle for manually lifting heavy loads without requiring external connections. Ideal for use where there are a small or narrow clearances.

Premium Hydraulic Oil

ENERPAC

Formulated specifically for use with Enerpac pumps. Antisludge, antirust, antifoam additives included.

Power Pump Oil—High viscosity index. Blue color.

Hand Pump Oil—Medium viscosity index. Not for use in power pumps. Yellow color.

Hydraulic Ram & Pump Sets

ENERPAC

Hydraulic rams support heavier loads at higher psi ratings than standard hydraulic cylinders. The manually operated hand pump is portable and can be brought to the workpiece.

Standard Ram & Pump Sets—Manually operated pump attaches to the ram to lift and support heavy loads. Single-acting cylinders are spring-loaded and return the load when pressure is released.

Low Height Ram & Pump Sets—Low-profile rams have a smaller range than standard rams.

Hollow Ram & Pump Sets—Feature ram with a hollow plunger and piston rod that can be used with a threaded rod. The manually operated pump is portable for bringing to the workpiece.

Workholding Hydraulic Rams

5UXA1

23NP45

Have a high cylinder force to position and securely clamp parts in high-volume applications where tight tolerances are critical.

SOLID PLUNGER

Block-body hydraulic cylinders are single-acting, which means they provide movement in one direction and have an internal spring that returns the cylinder to its starting position. Long stroke length allows use in tight spaces such as in welding applications.

HOLLOW PLUNGER

Block-body hydraulic cylinders support loads from both ends, allowing for push and pull operations that can utilize full cylinder capacity. They have a threaded collar and base mounting holes to provide a variety of mounting options, including T-slot, tabletop, and surface mounting. Single-acting cylinders are spring-loaded to ease unloading.

ENERPAC

Heavy-Duty Hydraulic Pullers

- Max. pressure: 10,000 psi

Speed crank and mechanical adjusting screw allow fast contact to work before hydraulics are applied. Made of forged steel components.

Master Puller Sets—Come complete with composite hand pump, single-acting hollow cylinder, 6-ft. hose, gauge, gauge adapter, and 4 puller styles (grip, cross bearing, bearing cup, and bearing puller). Pump and hollow ram provide precise hydraulic control and help ensure safe, efficient pulling. 2RV25 includes metal case. 2RV26 and 2RV28 include saddle and wood case.

Grip Pullers—Handle large components such as bearings and drive gears. Allow a person to handle the entire job and have a safety cage jaw retention system. Sets include 10,000 psi cylinder, flat and tempered ram point sets, and lift plate with mounting screws.

Note: Grip pullers do not include hydraulic pump, hose, or gauge.

Hydraulic Ram Spreaders

ENERPAC

- Max. pressure: 10,000 psi

RAM SPREADERS

General purpose ram spreaders attach to a hydraulic pump to spread crushed parts, open stuck doors, or separate parts in automotive and industrial applications.

LIFTING WEDGE RAMS

Have one flat side and a stepped wedge on the opposite side for use in lifting items off the ground. The item is lifted in stages and cribbed (or supported) while the wedge is moved to the next step to lift the item higher.

FLANGE RAM SPREADERS

Used to separate pipe flanges in industrial pipe maintenance operations. The ram is placed between the flanges and the pipes are spread as the jaws of the spreader open.

LIFT WEDGE RAM AND PUMP SETS

Include items to perform basic lifting of low-clearance items. Lift-wedge rams have a jaw with a flat side for resting on the ground and a stepped wedge side that allows items to be lifted off the ground in stages. The lifted item is cribbed, or supported, between lifting steps. Sets include a lift-wedge hydraulic ram, pump, and other accessories.

Heavy-Duty Hydraulic Maintenance Sets

ENERPAC

- Max. pressure: 5000 psi

General purpose maintenance sets are used for performing basic maintenance tasks around a facility or worksite, including lifting, bending, and straightening. These sets include a hydraulic cylinder, hand pump, and other compatible attachments.

Note: When cylinders are used with maintenance set attachments, the maximum system pressure must be limited to half the rated pressure (5000 psi). Capacity of cylinders limited to half of rated capacity.

Heavy-Duty Industrial Hydraulic Press Sets and Accessories

ENERPAC

Arbor Presses—Foot mounting holes allow vertical or horizontal positioning. Slotted back simplifies loading and unloading of longer parts. Order pump and cylinder separately.

C-Clamp Presses—18Y517 and 18Y518 are operational in all positions and include foot mounting holes for vertical or horizontal positioning.

Bench Press—Use where there is limited space, for quick press access, or for smaller parts. Includes 6-ft. thermoplastic hose. Cylinder mounting adapter allows lateral positioning along rails. Ships with predrilled mounting holes.

H-Frame Presses—Feature welded H-frame for longer life. Each includes heavy-duty steel pump mounting bracket, 10,000-psi pump, cylinder, hose, gauge, and gauge adapter. 3KD82 and 3KD81 feature 10-ft. control pendant; roller head design allows side-to-side movement and cylinder locking. Presses with over 10-ton capacity are equipped with an exclusive Hydra-Lift™ bed for adjustment.

35-Ton Hydraulic Punch and Punch and Die Sets

Note: Material thickness should not exceed hole diameter.

35-Ton Hydraulic Punch— Designed to punch burr-free holes in mild steel up to ½" thick. Includes bench-mount bracket, metal storage case, die changeover tools, and ⅜" coupler. Works with hand-, air-, and electric-powered hydraulic pumps.

- Spring return cylinder

Punch-and-Die Kits— Include punch and 4 die sets that produce round holes sized 0.44", 0.56", 0.69", and 0.81" in diameter. Once punched, these holes will accommodate standard bolts sized ⅜", ½", ⅝", and ¾".

Needle and Check Valves

Needle Valve— Controls cylinder speed. Can be used as a shutoff valve for temporary load holding.

Manually Operated Check Valve— Improves safety in load-holding applications. When closed, oil is allowed into cylinder but not back to pump.

Pressure Relief Valve— Add to a 10,000 psi pump or to a hydraulic system to limit system pressure. Opens when preset pressure is reached. Repeatability: ±3%. Includes 3-ft. line hose kit.

Hydraulic Split Flow Valve— Allows a single pump to independently operate 2 cylinders. Steel construction.

Hydraulic Torque Wrench Drivers

- Max. pressure: 10,000 psi
- Nickel-plated steel construction

All X-Series tools are CE-ATEX declared and ship with calibration certificate. Constant torque provides accuracy of +/- 3% across full stroke. Robust positioning handles have multiple mounting options, promoting safer usage of tool, even in hard to reach applications. Wrenches include carrying case. Drive units are compatible with W-Series, Ultra-Slim and WCR-Series cassettes.

X-SERIES SQUARE-DRIVE

Lightweight and ergonomic with easy operation reaction arm and push-button drive release. Feature extra durable manifold that provides added safety for user. Reaction arm has large lever that makes it easy to operate. This wrench design provides a small operating radius without sacrificing the endurance of the tool.

X-SERIES LOW-PROFILE HEXAGON

Ultra-slim, compact tool offers superior strength to size ratio, providing easy access with greater durability. Feature fast release drive that enables rapid exchange of cassettes without the use of tools for quick change-out. For Cassettes, go to Grainger.com and search by "Hydraulic Torque Wrench Cassettes". Cassettes not included.

Torque Wrench Pumps

3PDC6
Air Pump

- Max. pressure: 10,000 psi
- ¼" fluid port
- 85 to 90dBA

AIR PUMP

- ½" air inlet

2-speed operation. Equipped with 2 internal relief valves, 1 factory preset for overload protection and 1 user-adjustable for setting max. system pressure. With pressure gauge, filter/regulator/lubricator, sight gauge, roll cage, and oil drain. Air-operated valve included in pendant.

ELECTRIC PUMPS

- 115VAC
- 24VDC control pendant

30P879 is a powerful 2-speed pump that features built-in gauge, relief valve, adjustable pressure relief valve for accurate torque adjustments, and gives precise repeatability. 3PDC8 includes On/Off toggle, pendant with electro-mechanical push-buttons, and 24V transformer timer and circuit breaker. 3PDC9 has a multilingual digital LCD; tracks maintenance cycle, shows current pressure, cycle count, low-voltage warning, and trouble-shooting/diagnosis. Autocycle feature allows continuous torque wrench cycle operation.

1.6- to 30-Gal. AC Power Units

Recommended motor starters are sold separately on page 165.

1.6-GAL.

- Horizontal mounting

Feature an aluminum center adapter that also serves as a port manifold and valve housing with a load-holding check valve, and a VM01 cartridge relief valve. Pump housing has an anodized 70 Rockwell C aluminum oxide finish. Includes direct manifold mount.

5- AND 15-GAL.

- Fixed-clearance pumps (5-gal.)
- Pressure-balanced pumps (15-gal.)
- Vertical mounting for all models

Come fully assembled with filler breather, fluid level gauge with thermometer, pressure gauge, relief valve, and a manifold block for mounting a valve. Manifold is for direct pressure and tank (P&T) plumbing. Block comes with SAE ports only. Valve options and additional components are sold separately on page 2477.

8- TO 30-GAL.

Provide smooth, quiet, operation and feature an adjustable relief valve, bayonet-style filler breather, drain port, pressure gauge, SAE ports, sight/level/temp. gauge, and removable top plate to ease maintenance. Models 5 HP and larger have a premium-efficiency motor rated for 50 Hz and 60 Hz operation for overall system efficiency.

Power Unit Accessories

Reservoirs—Variable size for AC and DC power units.

Valve Manifold Kit—D03 manifold is for use with 1.6-gal. units (1/4 NPT remote mount and direct mount options).

Electric Lowering Valve Kit Assemblies—Provide simple installation into Monarch power units. Good for use in raise-hold lower applications where increased efficiency and exact positioning of the cylinder needs to be provided. Consist of a differential poppet-type and has a 2-way/2-position normally closed valve.

AC Hydraulic Power Unit for Auto Hoists

- 208/230V, single-phase, 18.5A
- Includes #12 AWG 3-wire, 18"L cord

Rugged power unit is for use in 2- and 4-post auto hoists with single-acting cylinders to raise, hold, and lower. High-torque AC motor is capable of starting up under load. Adjustable, high-efficiency VM01 relief valve and momentary push button start switch. Hardened steel valve parts are field serviceable.

DC Snowplow Power Unit

12VDC unit allows remote operation of a truck-mounted snowplow. Includes built-in crossover reliefs which help protect snowplow blades from damaging obstructions and a heavy-duty remote control station that operates the blade up/down and left/right when used with 1 single- and 1 double-acting cylinder. Adjustable relief is preset at 2500 psi for larger blades. Included 2-qt. nominal plastic reservoir. Horizontal mounting only.

12VDC Power Units with Control Station

MONARCH

Basic Power Unit—For remote requirements using special manifolds for control.

Manual Release—Designed for single-acting cylinders on lift, hold, and lower circuits. Features a multidirectional handle control. Includes a manual lowering valve.

Remote Release with Control Station—Controls lift and hold circuits; includes a solenoid lowering valve, and 10-ft. cord for start and lower functions on single-acting cylinders.

Birotational Power Unit with Control Station—For use with horizontally configured cylinders. Directional solenoid valves are not required for use in double-acting cylinder applications. Includes 10-ft. cord.

Remote Double-Acting Power Unit—2-position, 4-way solenoid valve allows bidirectional control of double-acting cylinders and hydraulic motor applications. Includes a pilot-operated check valve and relief valve.

Note: Go to Grainger.com® for Accessory Control Stations. Search for "Control Station for Power Unit".

MAXIM™

For Power Up and Power Down operations and has a check valve, preventing reverse flow and protect pump. 35LP42 is for load holding in 1 direction. Includes a relief valve and manual valve. 35LP41 lifts, holds, and lowers and is prewired with a quick-disconnect remote. Horizontal mounting.

CHIEF

Solenoid-operated unit is designed to lift, hold, and lower and comes with a wired remote control.

DC Lift Truck Power Units and Motor Pump Assembly

- Valve pressure preset to 2500 psi

36NE11 and 36NE12—Designed for single-acting cylinders on lift, hold, and lower circuits usually found on forklifts and other material handling equipment. Units include check, adjustable relief, and solenoid lowering valves. Horizontal or vertical mounting with a 45° elbow provided for vertical mounting.

36NE10—Motor and pump unit includes check and relief valves. Vertical or horizontal mounting. Requires a remote reservoir.

Note: Does not include remote handset.

Char-Lynn®

General Purpose Motors/Rotary Actuators

5PZF8

- Straight-keyed shafts
- Max. oil temp.: 180°F

H Series—Direct-drive motors are designed with spool valve technology for medium-duty applications. Include low-speed valving. Shaft speed and rotation direction can be controlled easily throughout the motors' entire speed range.

- Min. oil viscosity: 100 SUS
- Shaft size: 1" dia. x 1¾"L

S Series—Similar to H Series motors, but with precision-machined rollers to provide rolling contact support. Rollers further reduce friction for increased efficiency and extended motor life.

- Min. oil viscosity: 70 SUS
- Shaft size: 1" dia. x 1¾"L

Hydraulic Gear Pumps

- Right-hand rotation
- Pressure balanced
- SAE ORB Inlet/Outlet ports
- 10-micron filtration required

These reliable, high-efficiency gear pumps provide a comparably continuous, nonpulsating flow. Through-bore, bushing-type pumps for intermittent and continuous-duty applications. Lightweight design features aluminum center section with cast-aluminum end covers.

2-Stage Hi/Low Gear Pumps

For presses, log splitters, clamping units, and compactors. Automatic 2-speed operation. First-stage pump unloads fully at 450 psi; second stage operates up to 3000 psi. Generally, 5-HP input is required for 4F663 and 8-HP for 4F664. Clockwise rotation. ½" dia. x 1½"L drive shaft with #404 Woodruff drive key. Motor coupling and adapter not included. Direct drive only. 5ZPL6 and 5ZPL7 have SAE "A" ⅝" keyed shaft.

4F663

Parker

Threaded Cartridge Valves, Bodies, and Coils

4DML7 and 4UA84—Provide uncompensated adjustable flow control.

4DML8 and 4UA86—For continuous duty applications. Best option for setting hydraulic system pressure.

4DML9 and 4UA87—Used as crossover relief valves to limit pressure spikes.

4DMN1 and 4UA85—Can be used in a leg of a hydraulic system to reduce pressure lower than the system pressure. Also act as a relief valve, relieving pressure spikes between regulated port and actuator.

4DMK4—Provides control of an overrunning load and metering, and is suitable for holding a load.

4DML1—Flow goes in the nose, and pressure compensated flow goes out top port 3, while bypass flow is unregulated and goes out port 2.

4DML3—Consists of a steel ball that can seal against 1 of 2 adjacent seats, providing a path from the highest pressure signal to another function.

4DML5—In the side-to-nose direction, it performs as a standard needle valve, limiting flow. Allows free flow in the reverse direction, nose to side.

4UA88—Use for on/off or as a selector switch for 2 functions. Often used for raising and lowering a single-acting cylinder.

4UA89—Used for reversing valve for raising and lowering a double-acting cylinder or to control the actuation of a hydraulic motor.

4UA90 and 4UA91—Require 2 coils to operate.

Hydraulic Cartridge Valve Base—Allow individual piping of threaded cartridge valves.

Flow Control, Needle, and Check Valves

1A042

Brass valves are for pneumatic and medium-pressure hydraulic applications. Steel valves are for high-pressure hydraulic applications.

Flow Control—Provide precision flow control in 1 direction and automatically allow unrestricted free flow in opposite direction. 2-step needle allows fine adjustment at low flow.

Needle—Used as speed controls where a reverse flow check valve is not needed. May be used to control flow in both directions.

Check—Provide free flow in 1 direction and dependable shutoff in the opposite direction. Cracking pressure: 5 psi.

Note: Parker, DT, CV, and DC check valves are available; on Grainger.com®, search for "check valves."

*** Height of valves is measured from center of port with adjustment knob fully open.***

6PAA3

High-Pressure Carbon Steel Ball Valves

- Max. pressure: 6000 psi

Excellent for use in high-pressure hydraulic oil systems. Lockable handle valves have a handle that can be locked into position using a padlock that has a 5⁄16"-dia. shackle (not included).

4BA48

6PAE5

4HL35

Relief Valves

Control maximum pressure within a hydraulic circuit. 6X843 is designed for full flow with low pressure drop.

4HL34 is a differential poppet inline relief that has a minimum variation between cracking and full flow pressures.

4BA48 to 4BA50 have 2-stage balanced piston design, providing fast response and minimizing pressure override.

4HL35 is a double differential poppet relief that is used in systems that require crossover relief protection such as a hydraulic motor.

Find Check, Relief, and Flow Control Valves at Grainger.com®.

Adjustable-Flow Control Valves

Pressure compensated operation varies speed smoothly over the full range. Once speed is set with the lever, it remains constant regardless of load variation.

Flow Dividers

4F661

Accurately divide flow from a single pump source to a pair of matched cylinders or fluid motors. Gear-type rotary flow dividers synchronize 2 parallel motions hydraulically rather than mechanically. Max. outlet pressure: 4500 psi. Max. speed: 4500 rpm. Integral differential relief valves for each circuit limit pressure intensification. Cast-iron body.

D03 and D05 Size Solenoid-Operated Directional Valves

Bolt kits for valves available separately.

Note: Additional solenoid-operated directional valves are available; on Grainger.com®, search for "solenoid-operated directional valves."

D03 SIZE

- Working port pressure (P, A, B): 5000 psi max.
- Max. tank pressure: 1500 psi AC, 3000 psi DC
- AC valves have conduit box-style termination; DC valves require wire connector plugs, 4UB23 and 4UB24, sold separately

Optimized valve body/spool design minimizes pressure drop and energy consumption. Compatible with D03 and CETOP-3 mounting patterns.

D05 SIZE

- Max. operating pressure: 5000 psi
- Max. tank pressure: 1500 psi AC, 3000 psi DC
- Integral conduit box for wire termination

Feature higher machine productivity and uptime. Compatible with D05 and CETOP-5 mounting patterns. Solenoid/core tube design allows coils to be changed without removing valve from installation. Manual overrides.

4UB27

Monoblock Valves

- Load checks provided on all spools (except 1A967)
- All valves have direct-acting relief valves

Single-spool valves are 3-position and tandem center, 2- and 3-spool valves have a float spool. 6X845, 4HL36, 4HL37, 6W566, and 4HL32 can be converted to closed center or to power beyond operation; 6W565 can be converted to closed center only. 1A967 has a pressure detent release preset at 1200 psi.

Note: Additional stack valves are available; on Grainger.com®, search for "stack valves."

Double-Acting Tie-Rod Cylinders

2500 psi models feature: O-ring seal and vented back-up washers on piston, and U-cup on the gland. 3000 psi models feature: RoyalPlate Plus® coating on all piston rods which offers substantial performance enhancements and outstanding corrosion protection. Precision-honed tubes and ground and polished chromed piston rods. Ductile-iron piston with O-ring seal between piston rod and piston. Urethane U-cup rod seal, metal encased rod wiper (2½" bore and larger), crown seal on piston, nylon bearing on piston (4", 4½", and 5" bores), and hardened pins (4", 4½", and 5" bores). O-ring seal between tube and ductile-iron butt and gland casting.

Double-Acting Tie-Rod Cylinders MAXIM

- Max. working pressure: 2500 psi
- Temp. range: -20° to 220°F

Cylinders feature precision-honed steel tube and ductile-iron piston with high-tensile strength chrome-plated rod. Polypak rod seals. Pins and clips are included. 1" pin dia., except 6FCX8, 6FCZ3, and 6FDC0 are 1¼" dia. Black color.

Prince

5Z366

Double-Acting Ag/Mobile Welded Cylinders

- Max. working pressure: 2500 psi

Crosstube end mountings. All-steel welded construction. Heavy-wall honed steel tubing. Ground and polished chrome piston rod. Cast-iron ring, O-ring, and back-up washer packing on piston. Urethane U-cup rod seal. Truarc gland retainer. Cylinders will operate at full pressure through 24" stroke except: 5Z369 with limit of 13,000 lb. (1839 psi) in extension and 5Z371 with limit of 9700 lb.

MAXIM

Double-Acting Ag/Mobile Welded Cylinders

- Max. working pressure: 3000 psi
- Temp. range: 20° to 220°F

Cross-tube mounted cylinders feature ductile-iron pistons and precision-honed steel tubes, with Polypak rod seals and high-tensile strength chrome-plated tie rods. Black finish.

Hydraulic Cylinders

- Max. pressure: 2500 psi
- Temp. range: -20° to 160°F
- All-steel construction with black finish
- Modular mounting design

6", 8", 10", and 12" stroke cylinders have adjustable cushions on both ends. Piston rods are case hardened and hard chrome plated to resist mechanical damage. Urethane rod seal and nitrile piston seals are compatible with standard hydraulic fluids. Optional magnetic piston will actuate Position Sensors 4YRD6 or 4YRD7.

Note: Compact Hydraulic Cylinders available on Grainger.com®.

Compact Hydraulic Cylinders

- Temp. range: -10° to 165°F
- Aluminum body and piston

Almost half the length of comparable bore and stroke tie rod construction products. Piloted rod gland with long bearing area allows precise alignment of cylinder and load center lines. Standard SAE O-ring ports make leak-free hydraulic line connections.

POSITIONING SENSORS

- Max. switching current: 100mA

Cost-effective alternative to machine-mounted switches for providing accurate indication of load position. Low-profile design keeps switch within compact cylinder body envelope. Solid-state switches use GMR technology to ensure precision, reducing hysteresis characteristics.

EATON | Aeroquip

High-Pressure Hose Assemblies

- Temp. range: -40° to 212°F
- 4:1 safety factor

These Eaton Aeroquip FC579 hydraulic hose assemblies are suitable for high-pressure applications and have crimped-on rubber strain relief on their ends that helps extend the hoses' life. They have an abrasion-resistant SBR (styrene-butadiene rubber) tube and cover and are reinforced with two layers of steel wire braids for strength. The hose exhibits low volumetric expansion under pressure, which helps maintain the efficiency of the hydraulic system. These hydraulic hose assemblies are used for hydraulic jacking applications with petroleum- and water-based fluids. They come with fittings installed on both ends and are ready to connect to compatible equipment. Meet or exceed EN857, type 28C.

ENERPAC

Thermoplastic Hose Assemblies

- 1/4" inside dia.
- Max. pressure: 10,000 psi
- 4:1 safety factor

Enerpac H700 hydraulic hose assemblies are designed to exhibit low volumetric expansion under pressure, which helps maintain the efficiency of the hydraulic system. They come with NPTF (National Pipe Taper Fuel) fittings installed on the ends of the hoses and are ready to connect to equipment. These hoses are used for transferring petroleum- and water-based fluids in hydraulic systems. They have crimped-on rubber strain relief on the ends of the hose that helps extend its life. These hoses have a thermoplastic tube and an abrasion-resistant polyurethane cover. They are reinforced with two layers of steel wire braids.

ENERPAC
EATON | Aeroquip

10,000 PSI Hose Assemblies

- Max. pressure: 10,000 psi

All comply with Material Handling Institute IJ-100 hose specification. Dust caps included. All hoses, except 6BU60, 18Y529, and 18Y530 are rubber with black rubber external coating over 2 layers of steel wire braid. 6BU60 thermoplastic hose has a 4:1 safety factor and yellow polyurethane jacket. Use 3KD64 with Coupler 3KD28 (sold separately). Cylinder 6Z782 (sold separately on page 2468), and Hand Pump 6W461 (sold separately on page 2466).

MatchMate® Hose and Crimpable Fittings

EATON | Aeroquip

- Hose fittings are specific to the hose brand
- Synthetic rubber hose with 1-, 2-wire
- Temp. range: -40° to 212°F
- 4:1 safety factor

Hose has color-coded layline for easy identification and installation. Simply match ring symbols on hose to corresponding symbols on fittings, then match color of layline with color of dies to securely crimp hose and fittings. GH793 series also used with screw-together type fittings.

Note: Use Aeroquip® fittings with Aeroquip® hose.
Crimping machines sold on page 2483.

EATON | Aeroquip
Hydraulic Crimping Machines

- 5 tons of force
- Max. pressure: 10,000 psi

Lightweight, portable crimping devices crimp MatchMate® hose and fittings sold on page 2482, as well as Synflex® hose and fittings sold on page 2483. 1- and 2-wire, ¼" to 1¼" I.D. hose capacity, except 35Z762 crimps hose styles from 3/16" through 2" I .D. including 4- and 6-spiral wire crimp-style fittings. All models feature positive stop crimping.

Note: Machines 4YNW9 requires 10,000 psi pump, available on page 2466, and hose, available on page 2481.

Note: For Collet and Die Kits, see Grainger.com

Crimping Machine 35Z762 —Model has front-end loading design, electronic keypad control for crimp diameter, drop-in tooling (crimp die cages), power return stroke, return limit control, and backstop fitting locator.

Hose Crimp Machines

30 ton max. crimping force. Up to 1¼" hose capacity.
Crimping tool dies are available on Grainger.com.

Description	Includes	Mfr. Model	Item No.
Without Pump			
Portable, 12"D x 30H" x 15"W	10,000 psi Pump Nut, Crimp Head, Silver Die Ring, Black Die Ring, Hose Assembly, Stand Assembly	82C-061L	**21A867**
With Pump			
Bench Mount, 20"D x 25H" x 26"W	Crimp Head, Bench Power Unit Assembly, Silver Die Ring, Black Die Ring, 115/230V Power Unit	80C-061	**21A868**

EATON | Aeroquip

FC300 Hose and Reusable Fittings

- Hose fittings are specific to hose brand
- 4:1 safety factor
- Temp. range: -55° to 300°F
- Screw-together reusable type fittings

Hose transfers oil, air, gasoline, fuel oils, lubricating oils, and fire-resistant hydraulic fluids. Aeroquip elastomer tube, polyester inner braid, and single-wire braid reinforcement with blue polyester braid cover.

Note: Reusable fittings fit FC300 hose only.

FC300 Hose, SAE 100R5

High-Pressure Hydraulic Couplers

ENERPAC | SAFEWAY

- Max. working pressure: 10,000 psi

ENERPAC

Dust caps included (except flush-face model).

High-Flow—Poppet-style with crimped seal retention.

Flush-Face—Engage sleeve-locking mechanism by rotating sleeve after connection. Zero leaks.

SAFEWAY

S30 Series—Heavy-duty poppet valving, while fully interchangeable with ball check models (including older SafeWay product), eliminates low pressure leakage.

¼" High-Pressure Coupler Set—Use with 6W461 hand pump on page 2466 and 6Z782 cylinder on page 2468. Dust cap for female half only.

Snap-tite Couplers and Plugs

Innovative, high-pressure components suitable for use with oil and gas. For additional sizes, go to Grainger.com®.

71 Series—Feature superior flow and low pressure drop.

EA Series—Design allows clean linear flow for low pressure drop.

H Series—For use where single or double shut-off valving is required.

Straight Through H Series—For use when no valving is required.

Parker

Fluid Analysis Test

Helps prevent major hydraulic or lube oil system failures. Collect a small amount of fluid and use the included mailing labels to send sample to the lab. A full report will be returned.

Particle Count, Photomicrograph, Free Water, Spectrometric, Viscosity, Water (ppm), and Neutralization Analysis	**4VA89**

Portable Oil Filtration Systems

1XPW9

Handheld System—Lightweight system features 115VAC, auxiliary ports, and fluorocarbon seals. Includes 10-micron cellulose filter element and 2 clear, 5-ft. hose assemblies with wand attachments. Max. operating pressure: 50 psi. 25 psi differential pressure indicator.

- Temp. range: -15° to 120°F

Cart Systems—Ideal in pre-filtering and transferring fluids into reservoirs or cleaning up existing systems. Filter cart processes fluid through a primary 40-micron synthetic element, then a secondary 10-micron cellulose or Microglass element. Includes 2 hoses with wands.

- Max. temp.: 150°F

Hydraulic Return Line Spin-On Filters

- Max. pressure: 150 psi
- Max. temp.: 225°F
- Cast-aluminum head
- 15 psi bypass spring

Microglass filter has higher dirt-holding capacity for longer usable filter life. Elements are interchangeable with major brands size: 1-12 thread for 20 gpm, 1½-16 thread for 50 gpm models. Dual Buna N seals resist leaks up to 150 psi.

Head has ⅛" (F)NPT port with optional Gauge/ Indicator 2C492 sold separately.

AC Motor Driven Forced Air Oil Coolers

AKG®

- Brazed aluminum with black painted finish
- Max. temp.: 250°F
- Mounting feet included

Cool-Line A Series oil coolers offer maximum cooling effectiveness with minimum pressure drop. Aluminum bar/plate cooler construction is 30% to 50% smaller than copper tube/aluminum fin oil coolers for same heat transfer performance. Hollow profile design reduces local peak strains for a significant increase in cooler service life. Performance is based on oil entering cooler 50°F higher than ambient air temperature. For Replacement Motors, call 1-800-GRAINGER (472-4643). On Grainger.com, search by Grainger Item Number and click Optional Accessories.

Off-Line Forced Air Oil Coolers

AKG®

- Gearmotor type
- Spin-on filter
- Steel fan guard
- Mounting feet included
- 230/460V

High-performance aluminum cooler assemblies come complete with integrated 1750 rpm pump/motor and filter for cooling, filtration, or lubrication circuits in industrial or mobile applications. Excellent in low-pressure systems that use fluids with varying viscosities, and that have varying flow rates or pressure spikes in return lines. Pump flow range: 8.9 gpm to 45.1 gpm. Spin-on filter has a 9 micron rating with 50 psi bypass valve and visual indicator.

How To Size a Hydraulic Oil Cooler

1. Find the system oil flow (GPM).
2. Size the heat exchanger to remove approximately 30% of input horsepower.

To find input horsepower, multiply the system pressure (PSI) times the system flow (GPM), then divide by 1714 (PSI x GPM ÷ 1714).

To find an approximation of the BTU removed, multiply the horsepower heat removed by 2545.

4UJF5

AKG®

Air-Cooled Oil Coolers

4UJD5

- Brazed aluminum
- Max. pressure: 250 psi
- Max. temp.: 250°F
- Universal mounting bracket included

Deliver maximum cooling performance while minimizing pressure drop. Designed for rugged environments. Nonlouvered external fin prevents clogging and is easy to clean. Aluminum bar/plate cooler construction is 30% to 50% smaller in size than copper tube/aluminum fin oil coolers for same heat transfer performance. Cooler performance is based on oil entering cooler 100°F higher than ambient air temperature. 1000 standard ft. per minute (sfpm) air velocity.

DC Motor Driven Forced Air Oil Coolers

AKG®

- Brazed aluminum with black painted finish
- Max. pressure: 377 psi
- Max. temp.: 250°F
- IP 68 frame
- Mounting bracket included

Cool-Line D Series oil coolers maximize cooling capability while minimizing pressure drop. Ideal for rugged environments. Easy-to-clean, nonlouvered external fin prevents clogging. Aluminum bar/plate cooler construction is 30% to 50% smaller than copper tube/aluminum fin oil coolers for the same heat transfer. Hollow profile design reduces local peak strains, significantly increasing cooler service life. Performance is based on oil entering cooler 100°F higher than ambient air temperature. Brushless DC Motors are rated to 40,000 hours. Coolers with bypass valves are available on Grainger.com.

Hydraulic Accumulators and Repair Kits

CHARGING AND GAUGING KIT

Can be used for charging either a bladder or piston accumulator. Includes 10-ft. hose with fittings, adapter and gas valve, bleeder valve, gas chuck, and pressure gauge.

ACCUMULATORS

- Steel housing
- Max. pressure: 3000 psi

Bladder—Made from chrome-molybdenum alloy steel with forged ends.

- Temp. range: -20° to 200°F

Diaphragm—Lightweight, welded, completely sealed accumulators can be mounted in any direction. Hydrin diaphragm bag. Not serviceable.

- Temp. range: -40° to 176°F

Piston—Vertical-mount, serviceable accumulators have Buna N O-ring seals.

- Temp. range: -20° to 165°F

Steel Hydraulic Reservoirs

24W704

Feature 11-ga. hot rolled steel construction and oil sight gauge with thermometer. Filler breathers filter air to 40 microns and provide easy access for adding hydraulic oil. Include appropriately sized and placed suction and return connections.

24W699, 24W701, and 24W702 have convenient cleanout covers.

24W703 and 24W704 include internal baffles with cutouts.

Lovejoy

Aluminum Hydraulic Reservoirs and Tanks

3JWR9

Aluminum construction provides twice the heat dissipation of steel reservoirs.

RESERVOIRS

Include tank, oil sight gauge and filler breather, lid gasket, and lid with return/suction ports.

LEG KITS

Can be used with either reservoirs or tanks to improve air circulation under the tank.

ENVIRO SEALS

Heavy-duty seals help prevent oil leaks and can be used with either reservoirs or tanks.

TANK LIDS

Easily modified to accept vertical or horizontal pump/motor configurations and mounting of additional system hardware. Include lid, gasket, and fasteners.

**** Height includes filler breather, not included on tanks.***

Parker

Hydraulic Reservoir Breathers

- Operating temp.: -20° to 250°F
- 3-micron filter
- Silica gel desiccant type
- 1" NPT inlet

Help prevent moisture and particulates from entering the hydraulic system. Replace breather when silica gel changes color from blue to pink.

Reservoir Fluid Level/ Temperature Gauges

- Max. working pressure: 15 psi
- Max. temp.: 200°F

Level gauges with wide sight opening for maximum visibility. Crystal-clear glass sights are compatible with all mineral and petroleum-based fluids. ½-20 UNF threads on mounting bolts. For additional fluid level gauges, see page 2464.

Filler Breathers

24W705

24W709

- Max. operating temp.: 200°F
- 40-micron filter
- Foam filter media

Use as a tank filler port to allow tank to breathe while keeping out airborne particles. 24W708 and 24W709 feature bayonet design.

SPEEDAIRE PORTER CABLE BOSTITCH SENCO

Pneumatic Finish and Brad Nailers

FINISH NAILERS

Features include depth-of-drive adjustment, over-molded rubber grip, and no-mar tip. Oil-free.

Speedaire—Feature adjustable exhaust, quick jam release, belt hook, and adjustable trigger.

Porter Cable—Nailers have an adjustable exhaust, sequential-style trigger with lockoff switch, and adjustable belt hook.

Bostitch—45YJ66 has a tool-free jam release mechanism for easy nail removal and includes sample finish nails, extra no-mar tips, and carrying case.

3FWY2 features tool-free jam release, selectable trigger and tool-free adjustable belt hook. Includes sample fasteners, ¼" fitting, and carrying case.

Senco—21U129 has a rugged and magnesium body, sequential-style trigger, 360° adjustable exhaust, comfort grip, belt hook, and easy-clear latch.

BRAD NAILERS

Feature adjustable work contact element and adjustable drive depth. Clear jams quickly; load easily. Include rechargeable battery, charger, safety glasses, and case. 48LR72 features an LED light.

Notes: Pin Nailers available on Grainger.com.

Bostitch—3FWY3 features tool-free access to drive channel, dry-fire lockout, and quiet rear exhaust. Includes 100 brad nails, hex wrench, belt hook and carrying case.

Cordless Finish and Brad Nailers

FINISH NAILERS

All models include no-mar tips, a rechargeable battery, battery charger, safety glasses, and a carrying case.

Senco Battery-Actuated Nailers—48J292 features the Reflex-Shot design that provides an instant shot when the trigger is pulled. No fuel cell required. Includes selectable drive switch, nose-mounted LED light, reversible and adjustable belt hook, battery, and charger.

Paslode Fuel-Actuated Nailers—Include tool-free adjustable depth feature and easy jam removal.

BRAD NAILERS

Feature adjustable work contact element and adjustable drive depth. Clear jams quickly; load easily.

SENCO BOSTITCH

Pneumatic Framing Nailers

Clipped Head—Drives ring, screw, and smooth-shank 34° paper taped strip nails. High-efficient internal design reduces less wear and tear. Eliminates jams and mis-feeds and fits easily between studs and joints.

Full Round Head—35JG54 features a TrueDrive magazine to help reduce misfeeds and jams. Low-profile design allows use in tight spaces. 5KNH5 has a magnesium body with a 130:1 power-to-weight ratio and 1050 in.-lb. of driving power. Use in engineered lumber. Features tool-free push-button drive depth control, adjustable exhaust, and steel backer plate.

Offset Round Head—Features tool-free adjustable exhaust and push-button depth of drive.

4Z782

48LR62

BOSTITCH SENCO

Pneumatic Coil Roofing Nailers and Nails

These nailers feature depth-of-drive adjustment for added versatility. 4Z782 has contact trip trigger and magnesium housing for durability. Features fixed exhaust, single-action canister, rubber housing pads that prevent sliding, and tool-free shingle gauge. Hardened nose with carbide inserts resists wear. 48LR62 features an innovative firing valve that reduces air consumption without a reduction in speed or power. Includes an adjustable and removable shingle guide.

BOSTITCH

PORTER CABLE

Pneumatic 18-Ga. Finish Staplers

Bostitch—Tool-free access to drive channel, over-molded grip, dry-fire lockout, and rear exhaust. Oil-free. Fastener is sequential-trip release.

Porter Cable—Features toolless depth-of-drive adjustment and split nose design, helps removal of jammed staples. Convenient low staple reload indicator alerts you when to reload magazine. Magnesium body.

Pneumatic Impact Wrenches

- Max. psi: 90
- Butterfly throttles on in-line units allow 1-handed forward and reverse control
- Max. torque is in reverse

Light- and general-duty wrenches are best for automotive, basic maintenance, and light production applications. General-Duty Kit 1FYV1 includes 2Z747 impact wrench, 4-oz. bottle of air tool oil, quick coupler, male plug, 3" extension, carrying case, and ½", 9⁄16", ⅝", ¾", and ⅞" sockets. 21AA49 features exhaust and handle with grip. 21AA50 has front exhaust and handle without grip.

Note: For Impact Sockets, Mini and Light Duty Wrenches and Kits, go to Grainger.com.

Air Tool Combination Kit

Popular air tool for general maintenance, automotive repair, and metalworking.

Description	Item No.
7-Pc. Mechanic's Wrench/Ratchet Kit, Includes (5) Sockets (½, 9/16, ⅝, ¾, and ⅜ to ½ in Adapter), 107XPA Air Ratchet, 231C Impact Wrench, Blow-Molded Case	**5LA54**

Pneumatic Nut Runners

- Required psi: 90
- Min. hose size: ¼" (45NW63 is ⅜")

Provide fast screw/nut rundown and removal. 90° angle heads allow access to tight locations.

Note: For more pneumatic nut runners, see Grainger.com®.

† Full load cfm is based on a 1-min. run time.

- Max. psi: 90
- Reversible
- ¼" quick-change bit holder included

Adjustable Cushion Clutch—Controls torque output to the bit. Straight handle units come with suspension bails.

Direct Drive Clutch—General duty for large and medium screws.

Positive Action Clutch—Standard-duty, for use with soft-draw applications. Variable-speed throttle. Through-handle exhaust.

Positive Jaw Clutch—Clutch engages when the operator starts the motor and presses the tool toward the fastener. Designed for applications where driving torque may exceed final seating torque.

Precision Shut-Off Clutch—Designed for precision torque applications. Units come with suspension bails.

Pneumatic and Battery-Operated Riveters

Air operated and produce higher compression force, speed installation, and reduce hand fatigue and injuries compared to hand-operated riveting tools. Can set uniform rivets in any position.

General-Duty—2-pc. jaw system increases jaw traction. Internal vacuum for 45RM38 holds mandrel in position for any-angle tool operation.

Industrial-Duty—40G468 includes battery and charger. 3CRH6 and 3CRH7 have internal vacuum, holding mandrel in place for any-angle tool operation.

Industrial-Duty with Mandrel Collection System—Quick-disconnect allows components to be serviced without tools. Swivel air fitting reduces air consumption with On/Off switch.

Pneumatic Die Grinders

- Required psi: 90

Air-operated tools rotate carbide burs, mounted points, cartridge rolls, flap wheels, and other attachments for grinding, deburring, and polishing. They provide light-to-moderate material removal where an angle grinder would be too large, and a rotary tool would be too small. Suitable for reworking dies, polishing metal, removing gaskets, and smoothing welds. Grinders have no guard and are not for use in cutting applications. Tools are typically lighter than corded or cordless grinders to help reduce fatigue during extended use.

Bench Mount—Include a mounting base with an articulating arm that holds the grinder perpendicular to workpieces to make straight, square, and level grinds for precision die maintenance and repair. The arm allows the operator to guide the grinder along workpieces to remove welds and smooth rough edges more quickly and with greater accuracy than traditional hand grinding. The magnetic mounting base supports the arm and attaches to a metal die, mold, or worktable.

120° Angle—Grinding head is angled to the tool body for grinding angled slots and in other extremely tight spaces where a right-angle tool won't fit.

Right Angle—The grinding head is set 90° to the tool body for working in corners, between surfaces, and in other tight spaces. Commonly used to grind and clean hubs, notches, and recesses.

Straight—Grinding head is in line with the tool body and has a slim profile to reach through openings where an angled head may not fit. This alignment makes it easier to apply pressure to the grinding head for greater control with detailed work.

Straight Extended—Have additional length to ease work in hard-to-reach areas.

Pneumatic Angle Grinders

- Lever switch, except 1XFG5 has a trigger switch

Air-powered tools rotate grinding wheels to remove surface material or rotate cut-off wheels to cut through material. Their head is set at a right angle to the tool body so they are more than vertical grinders and allow for better visibility of the wheel and the work surface. Commonly used to grind welds, cut metal plates and pipe, and polish concrete, stone, and metal.

Compact—Have a short body with a reach up to 6" and can use small-diameter wheels for detailing work. Smaller and lighter than other angle grinders to provide a comfortable grip and reduce hand fatigue.

Standard Reach—The tool body gives them a 6" to 11" reach for grinding open surface areas where there's no need to work in tight spaces.

Extended Reach—Tool design extends the wheel from the grinder body to lengthen their reach beyond 11" for accessing surfaces within frames and machinery.

Pneumatic Pencil Grinders

Tools are air-powered to rotate carbide burs and mounted points to perform light material removal in detailed grinding, sculpting, deburring, and polishing tasks. Their slim, compact body allows for fine control and access to tight spaces to perform intricate, precise work. Commonly used for final cleaning, die and mold polishing, hole finishing, and contour blending.

⅛ in. Collet—This standard size collet accepts burs and mounted points with a ⅛" dia. shank.

⅛ in. Collet Pencil Grinder Kit—Includes a pencil grinder with a standard size ⅛" collet and various burs and mounted points with a ⅛" dia. shank to fit the collet.

3mm Collet Pencil Grinder Kits—Include a pencil grinder with a 3mm collet and an assortment of accessory items. A 3mm collet is the closest metric equivalent to a ⅛" collet.

Pneumatic Sanders

- Required psi: 90
- Air inlet: ¼"
- Min. hose size: ⅜"

Note: See page 2370 for sanding discs.

10D238—Includes 1 each of 3", 4½", and 5" sanding pads, setting steel bar, and L-shaped wrench.

11C919—Includes: (1) Mini pistol disc sander with 3" Roloc pad, (10) 3" 80-, 100-, and 120-grit sanding discs, (1) 3" fine, medium, and coarse surface prep discs, and spindle wrench packed in a heavy-duty carrying case.

11C929 and 5KB20—Side handle fits either left or right side. Include lockout nut and wrench.

11C996—Features a rear exhaust and a pistol grip.

13F677 and 13F678—Ergonomic offset handle provides greater operator comfort and control. Gearless design reduces downtime and maintenance costs.

Industrial-Duty Right-Angle—13F686 and 13F687 rear exhaust-type sanders are for composite and fiberglass sanding. 13F659, 13F660, and 13F689 are low-profile rotational exhaust-type units with a high power-to-weight ratio and ergonomic design.1

Industrial-Duty Straight-Line—Reload easily with quick action paper clamps. 1" stroke length. Use bodyfile sanding sheets.

Industrial-Duty Vertical—Use fiber discs and come with a 7" backing pad.

Compact Right Angle 60UP22

Standard Reach Perpendicular Mount 48MA05

Extended Reach Parallel Mount 36WC33

Pneumatic Cut-Off Tools

Compact tools rotate abrasive discs or wheels to cut metal and other materials. Equipped with a wheel guard to deflect sparks, debris, and shattered wheel fragments away from the user.

Standard reach tools have a 6" to 11" reach and allow for a one-handed grip to control the tool.

Extended reach tools can reach beyond 11" and require a two-handed grip for tool control.

Right angle mount tools position wheels on the side of the tool with the cutting edge at a right angle to the body.

Parallel mount tools position wheels below the tool head with the cutting edge extending inline with the tool body to make cuts from the front or side of the tool.

Perpendicular mount tools position wheels at the front of the tool with the cutting edge set perpendicular to the body to cut off lengths of pipe and other materials.

Note: For cut-off wheels go to Grainger.com and search for "cut-off wheels"

Engraving Pens and Reciprocating Filer Tools

- Required psi: 90
- Air inlet: ¼" NPT

Speedaire—Offer fine-point stylus for precise engraving and cushion finger grip for comfort.

Ingersoll Rand—Feature zoom throttle and variable speed.

Nibbler 11C964

5KB22

Pneumatic Nibblers & Shears

Commonly used to cut panels, ducts, ribbed roofing, and siding in mechanical, electrical, plumbing, HVAC, metalworking, and automotive applications.

Shears move a pivoting blade against a fixed blade to make straight or curved cuts. Pistol grip handle.

Nibblers punch a series of small holes to cut flat, corrugated, or uneven sheet metal.

23Z007

Pneumatic Reciprocating Saws

Make straight and curved cuts in sheet metal, aluminum, plastic, and other materials. Can access small spaces and offer one-handed operation.

Note: For replacement blades go to Grainger.com and search for "air-powered reciprocating saw blades"

Chipping Hammers

- Required psi: 90
- See page 2514 for chisels

Heavy-duty, air-powered chipping hammers strike chisels against surfaces for heavy material removal and light demolition using bits with 0.580" or 0.680" round or hex shank. Tools have a long barrel that allows a longer stroke length and more driving power than air hammers. They require two-handed operation to maintain control and have a switch on the handle for starting and stopping the tool. Suitable for cleaning off heavy slag and buildup, chipping away adhered layers, prying apart fused materials, and breaking down assembled components.

Note: Be sure that the chisel is held securely against the work surface and is never allowed to "free fire" or allow the chisel to strike the retainer. This practice could damage the retainer and break the barrel.

Riveting Hammers

- See page 2514 for chisels

Tools are air-powered and use chisel bits with a round shank to set rivets for assembling parts and repairing metal structures. They deliver a measured blow to prevent damage to rivet heads and surrounding materials. The pistol-grip design sets the barrel at a right angle to the grip so users can control the pressure applied to the bit and hold the tool steady in a range of positions on vertical and horizontal surfaces. Have a trigger switch on the grip for starting and stopping the tool. Compact size allows use in tight spaces such as inside frames and assemblies.

Note: Be sure that the chisel is held securely against the work surface and is never allowed to "free fire" or allow the chisel to strike the retainer. This practice could damage the retainer and break the barrel.

Rivet Busting Hammer

- See page 2514 for chisels

Heavy-duty, air-powered hammer has an extra-long barrel and stroke to deliver powerful blows to remove or set rivets, cut through tanks, and break up brick or concrete. Tool uses long, thick-shanked chisel bits and provides a similar force to jackhammers but is lighter to ease transport and reduce operator fatigue during extended use. Requires two-handed operation to maintain control and has a switch on the handle for starting and stopping the tool.

Note: Be sure that the chisel is held securely against the work surface and is never allowed to "free fire" or allow the chisel to strike the retainer. This practice could damage the retainer and break the barrel.

Diggers, Paving Breakers, Rock Drills, and Backfill Tamper

DIGGERS

Latch retainer-type diggers for light- and medium-weight use.

PAVING BREAKERS

More powerful with fewer parts than competitive models. Spring-loaded anvil bushing keeps tool on work surface. 1-pc. housing eliminates side rods and springs.

ROCK DRILLS

Designed with speed and hole-cleaning capacity for fast rock-drilling applications. Easily adjustable 3-speed throttles with reversible pawls. Drill 2½" dia. holes up to 6-ft. deep.

AIR BACKFILL TAMPER

Ideal for backfilling around foundations and other tight areas. Dual-action sand wiper keeps dirt out of the barrel. Tamper includes built-in lubricator and muffler. Also has ⅞" tapered rod, plated piston, and standard 5¾" round malleable butt.

HUBBELL · SPEEDAIRE · Ingersoll Rand

Tool Retractors

ADJUSTABLE TOOL RETRACTORS

Include adjustable cable stop and lower safety hook.

Hubbell BD Series—Rugged ABS plastic construction with spring tension adjustment and push-button tension release.

Hubbell BG Series—Steel construction with a black polyester baked finish. Available in both ratcheted and constant pull configurations.

INDUSTRIAL TOOL RETRACTORS

Speedaire®—Rugged steel construction; permanent lubrication; easily replaceable, self-contained main spring. External tension adjustment requires no special tools. Include adjustable cable stop and safety hook.

Ingersoll Rand—Rugged steel retractor has a permanently lubricated, self-contained main spring that is easily replaceable. External tension adjustment requires no tools. Nylon-coated steel aircraft cable with adjustable cable stop and safety hook.

PRODUCTION TOOL RETRACTORS

Easy cable tension adjustment, in-line alignment of hanger and tool hook, and maintenance-free design.

Speedaire—Die-cast aluminum units feature 3 suspension points.

Ingersoll Rand—Feature in-line adjustment of hanger and tool hook.

Air Guns Information

Also known as blow guns, they deliver a high-pressure airstream to help clear chips and debris, and cool or dry machinery and parts.

SOUND LEVEL

Measures air tool noise output in decibels (dB). There are no regulations specific to air tool sound levels, but they contribute to workplace noise. OSHA standard 1910.95 establishes guidelines for occupational noise exposure based on the level of sound and duration of exposure.

OUTPUT THRUST

The force in pounds (lb.) that air guns produce to move debris. The higher the number, the greater the force. Thrust is measured using 100 psi operating pressure with readings taken 3" from the end of the nozzle.

OSHA PRESSURE COMPLIANT

OSHA standard 1910.242(b) requires that pressurized air used for cleaning not exceed 30 psi. Air tools that are compliant have vents or other relief devices that drop pressure below 30 psi if nozzles get blocked (dead ended) against someone's body. They prevent excessive air pressure which can cause injuries or death.

NOMINAL EXTENSION LENGTH

Attach to compatible air guns and increase their length for cleaning hard-to-reach areas.

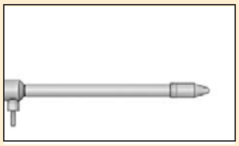
Focused Air Flow Pattern

Chip Protect Air Flow Pattern

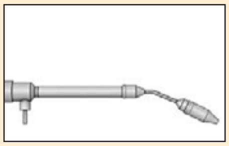
Wide Air Flow Pattern

AIRFLOW PATTERN

Focused: Provides a high pressure, concentrated airflow that can be directed to a specific spot. **Chip Protect:** Delivers a center airstream that can move debris while an outer air curtain deflects flying chips and dust away from the user. **Wide:** Creates a squeege effect for more effective drying of most surfaces.



Straight Nozzle Angle



Angled Nozzle

Flexible Nozzle Angle

NOZZLE ANGLE

Straight: Long length provides an extended reach. **Angled:** Eases access to tight spaces compared to a straight nozzle. **Flexible:** Can bend around obstructions for more access in tight spaces.

Pistol-Grip Air Guns

GUARDAIR. SPEEDAIRE

- Air inlet: (F)NPT
- OSHA Pressure Compliant

Deliver a high-pressure airstream to clear chips and debris, cool or dry machinery and parts, eject or convey parts, and clean hose assemblies. Have a trigger in front of the handle for fingertip control of the high-pressure airstream and include a nozzle. Models with an included chip guard help keep debris from flying back at the user.

- Straight nozzle angle
- OSHA Pressure Compliant

Grip sets the wrist in a natural position and reduces hand fatigue for a comfortable hold during extended use. Have a long lever to hold down while gripping the tool and delivering a high-pressure airstream.

For more information on Air Guns, see page 2515.

Air Gun Nozzles

Connect to the nose of an air gun to regulate airflow. They concentrate air pressure to increase airflow velocity and force, focus air in a specific pattern, and control air consumption to reduce noise and use compressed air more efficiently than an open nose. Use to replace worn nozzles or change to different styles to suit specific applications. **Nozzles are typically compatible with guns of a specific brand and model.**

Go to Grainger.com for a complete list of air gun compatibility.

Air-Powered Vacuum Guns and Accessories

VIKING GUARDAIR

Combination Vacuum & Air Gun
46D306

Create suction to draw debris through the vacuum nozzle and into a removable collection bag, or attach to a hose to collect debris in a larger container. The handpiece connects to a compressed air supply and a trigger or other actuator that starts and stops suction.

Combination Vacuum and Air Gun—Can switch between suction and blowing modes so one tool can blow away material and vacuum up debris.

AIRSPADE GUARDAIR

Air Excavation Tools and Accessories

Connect to a compatible compressed air supply and deliver a high-pressure airstream to remove soil and debris, especially from areas where shovels and backhoes may damage buried utility lines. Commonly used to dig trenches for new underground lines, uncover buried lines to make repairs, and clear cracks and joints in pavement before sealing.

Static-Eliminating Air Cannons, Air Guns, and Accessories

EXAIR SCS

Air Cannons
48RD62

Air Gun
20FX22

Emit an ionized airflow to neutralize static charges and remove dust and debris from objects and surfaces. They prevent dust from sticking to surfaces, stop parts from clinging together, and eliminate static discharge which can damage sensitive electronic components.

Pressure Range	Air Consumption	Sound Level	Nozzle Length	Air Inlet	Includes Adapter	Brand	Mfr. Model	Item No.

Pneumatic Coupling Plugs and Sockets

ARO—ARO steel quick-connect air coupling plugs are the male end of coupling sets. Also called nipples, they're inserted into the coupling bodies (female ends). Steel is hard and resilient with a wide working temperature range.

Industrial—Connect with industrial interchange nipples. Push-to-connect sleeve, makes connect easy with one hand.

Lincoln—Interchangeable with Lincoln Long Stem couplers.

Tru-Flate-Automotive—For the automotive industry. Grip-ring sleeve version has a knurled diameter, providing easy operation when gloves are worn.

Universal—Permits multiple series nipples to mate with one coupler. Universal Interchange fits Automotive, ARO and Industrial Interchange plugs.

COXREELS® REELCRAFT SPEEDAIRE

Washdown & Pressure Washer Spring-Return Hose Reels

Reels hold water hoses for heavy-duty cleaning applications. Spring-return hose reels help retract hose onto the reel without an external power source. The spring-return has a locking ratchet and pawl that locks into place once users have pulled the hose out to the desired length. The ratchet is released by pulling the hose out, and then hose can be rewound onto the reel. Stainless steel reels withstand rust, corrosion, contaminants, and saltwater. **Pressure washer reels** hold hoses that use high pressure to remove dirt, grease, and grime in food processing plants, pulp and paper plants, and equipment. **Washdown reels** handle hoses for low- to high-water volume output with a range of psi requirements for low- or high-pressure applications such as cleaning service bays, food processing plants, and fleet maintenance. 3MJJ5 includes hose.

REELCRAFT

Pre-Rinse & Potable Water Spring-Return Hose Reels

- Spring-return rectracts hose without external power source
- Reels mount to floor, walls, or ceiling
- Adjustable hose guide included
- Includes hose

Pre-rinse reels hold hoses that carry water to highly corrosive environments and are powder-coated. **Enclosed pre-rinse reel** shields out any contaminants to protect and extend the life of the reel, the hose, and the components inside. Both types are rated for hot water washdown and food prep in restaurants and commercial kitchens. **Potable water reel** connects hoses to drinking water systems. This single-pedestal reel has a full-flow stainless steel fluid path with a PVC swivel, drain, and standard female garden hose fitting. It holds low-pressure water hoses to bring potable water to water purification plants, water storage tanks, and food and beverage plants.

Air-Only Spring-Return Hose Reels

- Retracts hose onto the reel without an external power source

Reels hold hoses that supply air for tools, sprayers, and services from compressed air, and breathable air for respiratory applications with low- or high-pressure breathing systems. Ratchet and pawl locks desired hose length into place.

Lightweight Air or Water Spring-Return Hose Reels

- Mount to a floor, wall, or ceiling

These low-pressure reels are designed for less demanding industrial or commercial use. The spool is made from engineered plastic for long service life. Reels include a guide arm that adjusts to seven positions. They are commonly used with pneumatic tools, in lubrication, and with general industrial air/water services.

Enclosed Air or Water Spring-Return Hose Reels

2CUD6

29PY57

2CUC7

Compact and durable reels are for use in limited spaces. **Enclosed lightweight air or water reels** are designed for continuous use. Polypropylene case houses the brass swivel and fluid path, the steel main shaft, and the steel spring. Case resists most acids, alkalis, and UV rays, and protects and keeps the hose clean. Lightweight reels mount on a wall, ceiling, or the floor. Commonly used with pneumatic tools and for water service. **Enclosed controlled-retraction air or water reel** reduce retraction speed to a safe, steady pace to prevent injuries and hose whipping. 90° full-flow NPT swivel inlet is machined from solid brass with nitrile swivel seals. Powder-coated, heavy-gauge steel enclosed casing shields out any contaminants and protects and extends the life of the reel, the hose, and the components inside. Reel mounts to the floor, wall, ceiling, or on a bench, and include adjustable guide arms and adjustable hose roller guides. Used with air or water hoses in grocery stores, restaurants, and commercial kitchens. **Enclosed air or water reels have** a full-flow shaft and swivel to assure product delivery. Reels mount to the floor, wall, or on the ceiling and include an adjustable guide arm. Used with air or water hoses in food and chemical plants, automotive service centers, and with pneumatic tools.

Dual-Arm Air or Water Spring-Return Hose Reels

31XG65

448F65

5PG04

- Mount on a wall, ceiling, or in a truck
- Include a field adjustable guide arm

Feature an all-steel, reinforced dual-pedestal base and arms for increased stability. Reels are powder-coated for corrosion resistance. Hold air or water hoses and are commonly used in manufacturing facilities, auto or fleet service centers, and with food and chemical processing.

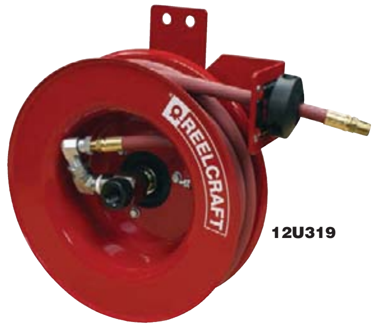
REELCRAFT®

Side-Mount Air or Water Spring-Return Hose Reels



12U319

- Hose Included
- Max. operating pressure: 300 psi
- Brass swivel
- Red reel color

Side-mount reels mount with their right or left side against a column, a wall, or wherever space is limited. The guide arm on these low-pressure reels adjusts to right hand (top wind) or left hand (bottom mount). Steel bases are robotically welded for maximum strength, all steel components are powder-coated for corrosion resistance, and full-flow shafts and swivels deliver air or water. Compact reels with air or water hoses are used with pneumatic tools, in automotive service centers, and for paint spraying.

®REELCRAFT

Dual-Pedestal Air or Water Spring-Return Hose Reels

- Hose Included
- Max. operating pressure: 300 psi
- Red reel color
- Nickel-plated steel swivel

Include a reinforced dual-pedestal base and guide arm to reduce vibration during use. Feature an all-steel construction with a baked-on powder-coated finish for corrosion resistance. Low-pressure, compact reels mount on a wall or on the ceiling. Dual-pedestal hose reels and air or water hoses are commonly used in manufacturing facilities, auto or fleet service centers, and food and chemical processing.

COXREELS®

Air or Water Combination Spring-Return Hose Reels

- Max. operating pressure: 300 psi
- Blue reel color
- Brass swivel

Items combine two hose reels in one unit where each reel and hose operates independently and can carry air in one hose, water in the other hose. Combination hose reels are used where two hoses are needed to complete a job and where space is limited. The heavy-duty steel, single-mount base provides stability and is powder-coated for corrosion resistance. Two external fluid paths include 90° full-flow NPT swivel inlets and nitrile seals. Low-pressure reels mount on a wall, floor, or overhead with one mounting pattern to save installation time, and include adjustable guide arms. Reels connect air or water hoses to pneumatic tools, with air/water services, and in washdown applications.

Base Frame Air or Water Spring-Return Hose Reels

- Nickel plated steel swivel

Reels include full-width frames for stable mounting on portable surfaces, for permanent service, or in plant work areas. Low-pressure, powder-coated steel reels resist corrosion and hold shorter lengths of larger diameter hose. Base frame spring-return hose reels and air or water hoses are commonly used in bulk handling, fuel delivery, and construction operations.

High-Visibility Large-Frame Air or Water Spring-Return Hose Reels

- Hose included
- Max. operating pressure: 300 psi
- Blue reel color
- Brass swivel

Large-frame reels feature a larger chassis and frame that hold longer lengths of hose, or shorter lengths of large diameter hose. These low-pressure, single-pedestal reels mount to a wall, floor, vehicle, or an overhead position, and have a movable guide arm. The dual-axle support system increases stability and reduces vibration during use. These reels with movable arms are commonly used with air or water hoses for washdowns, lubrication, and in auto and fleet service centers.

Fuel Spring-Return Hose Reels

Fuel hose reels hold various lengths and diameters of hose for fuel delivery systems including diesel exhaust fluid, gas, and liquid propane. **DEF hose reels** hold hoses that dispense DEF (diesel exhaust fluid) for late model diesel engines and for emerging greener DEF service stations. **Gas hose reels and hoses** are found in utility, ground support, and bulk liquid handling transport services to convey gasoline. **Liquid propane hose reels and hoses** safely handle the transfer of liquid propane for use in agriculture, construction, and heating.

Oil & Hydraulic Oil Spring-Return Hose Reels

For the delivery of oil and hydraulic oil for operating hydraulic cylinders, tools, and equipment.

Hose Cap.	Hose End Configuration	Maximum Operating Pressure	Overall Dim.	Swivel Material	Reel Color	Brand	Item No.
Compact Oil Spring-Return Hose Reels							
Hose Included							
25 ft (⅜ in I.D.)	⅜ in MNPT	2,600 psi	14 ¼ in L x 6 ⅛ in W x 14 ⅜ in H	Nickel Plated Steel	Red	Reelcraft	**4Z314**
30 ft (⅜ in I.D.)	⅜ in MNPT	2,600 psi	14 ¼ in L x 6 ⅛ in W x 14 ⅜ in H	Nickel Plated Steel	Red	Reelcraft	**41GR93**
35 ft (½ in I.D.)	½ in MNPT	3,000 psi	16 ¾ in L x 5 ⅞ in W x 17 ⅝ in H	Nickel Plated Steel	Red	Reelcraft	**4HK91**
Corrosion-Resistant Stainless Steel Oil Spring-Return Hose Reels							
Hose Not Included							
50 ft (½ in I.D.)	—	3,000 psi	19 ¾ in L x 7 in W x 20 ¼ in H	Stainless Steel	Silver	Reelcraft	**59YT33**
66 ft (⅜ in I.D.)	—	3,000 psi	19 ¾ in L x 7 in W x 20 ¼ in H	Stainless Steel	Silver	Reelcraft	**22KX15**
Dual-Arm Oil Spring-Return Hose Reels							
Hose Included							
50 ft (¾ in I.D.)	¾ in MNPT	1,250 psi	24 in L x 10 ½ in W x 25 ⅜ in H	Nickel Plated Steel	Red	Reelcraft	**4NA90**
75 ft (½ in I.D.)	½ in MNPT	3,000 psi	24 in L x 10 ½ in W x 25 ⅜ in H	Nickel Plated Steel	Red	Reelcraft	**4NA89**
100 ft (½ in I.D.)	½ in MNPT	3,000 psi	24 in L x 10 ½ in W x 25 ⅜ in H	Nickel Plated Steel	Red	Reelcraft	**448F64**
Dual-Pedestal Oil Spring-Return Hose Reels							
Hose Included							
50 ft (⅜ in I.D.)	⅜ in MNPT	2,600 psi	16 ½ in L x 8 in W x 17 in H	Nickel Plated Steel	Red	Reelcraft	**448F70**
50 ft (½ in I.D.)	½ in MNPT	3,000 psi	16 ½ in L x 9 in W x 17 in H	Nickel Plated Steel	Red	Reelcraft	**2CAG7**
Lightweight Oil Spring-Return Hose Reels							
Hose Included							
35 ft (⅜ in I.D.)	⅜ in MNPT	1,000 psi	16 ½ in L x 6 ¼ in W x 17 ⅞ in H	Nickel Plated Steel	Black, Red	Reelcraft	**5KPA0**
50 ft (⅜ in I.D.)	⅜ in MNPT	1,000 psi	16 ½ in L x 7 ¾ in W x 17 ⅞ in H	Nickel Plated Steel	Black, Red	Reelcraft	**5KPA1**
35 ft (½ in I.D.)	½ in MNPT	1,000 psi	16 ½ in L x 6 ¼ in W x 17 ⅞ in H	Nickel Plated Steel	Black, Red	Reelcraft	**4NA81**
Standard Oil Spring-Return Hose Reel							
Hose Included							
50 ft (½ in I.D.)	½ in MNPT	2,000 psi	19 ¾ in L x 7 in W x 20 ¼ in H	Nickel Plated Steel	Red	Reelcraft	**4Z313**
Truck-Mount Oil Spring-Return Hose Reels							
Hose Included							
50 ft (½ in I.D.)	½ in MNPT	2,500 psi	19 ½ in L x 9 ⅜ in W x 21 ¼ in H	Brass	Blue	Coxreels	**29RE50**

COXREELS® REELCRAFT®

Multipurpose Motorized Hose Reels

- 12V DC motor
- Hose not included

Reels feature electric or air motor options for automatic hose or cord retraction. These motor-driven hose reels can be used with longer hoses as a water supply, for pressure washing, or grounds maintenance applications.

SPEEDAIRE®

Hose Barbs, Menders, Ferrules, Crimper and Die Modules

Provide fast, easy hookup for bulk hose pipe thread fittings.

BEADED HOSE BARBS

Flat area between the barb and the body fitting allows the greatest area possible for clamping.

HOSE MENDERS

Connect on any 2 hoses or a broken hose that meets dimensional specifications.

BRASS HOSE FERRULES

Long-barrel ferrules crimp air hose to barb to form a permanent assembly.

HOSE CRIMPER

Portable or workbench-mounted crimper secures standard brass ferrules onto general purpose or heavy-duty air, water, and material hose for a complete hose assembly. Includes 5 die sets.

DIE MODULES

Hardened steel ribbed die sets can be used for crimping ¼" single-braid through ⅜" double-braid compressed air line hose or standard air line cables.

Multipurpose Reusable Hose Fittings

- 250 psi max.

They have a male NPT end that attaches to pipe and a genderless end that screws onto a hose end and is secured with a wrench. Reusable hose ends are used in multipurpose hose assemblies to convey air, water, or chemicals and can be removed and used again.

MULTIPURPOSE REUSABLE HOSE MENDERS

Commonly used to repair and connect damaged multipurpose hoses in the field. These fittings have two male ends that screw onto hose ends and are tightened with a wrench to create a leak-resistant seal. Reusable hose menders are used in multipurpose hose assemblies to convey air, water, or chemicals and can be removed and used again.

Universal Couplings

- Constructed of malleable iron
- Same gasket, safety clip, and lanyard for all coupling sizes, except self locking couplings use gasket 36LH62
- Gasket temp. range: -20° to 160°F

A sexless common head design eliminates mismatched fitting and allows direct locking connection between any 2 fittings from ¼" to 1". 6YZH1 to 6YZH4 do not require a pin.

Note: Do not use coupling for steam service. Rated for air service only, up to 110 psi.

Steam Hose Barbed Fittings

- Male x Male fitting
- Hose barb x NPT connection type
- Steel material

Steam hose barbed fittings are typically used in low-pressure steam heating, humidification, and washdown applications up to 150 psi. They provide compatible threads for connecting steam hoses to equipment in steam systems. Also known as hose nipples, they have raised ridges (or barbs) on one end that grip the inside of the hose to hold it in place and are secured with a clamp for a leak-resistant seal.

Steam Hose Clamps

- Carbon steel construction

Steam hose clamps secure steam hose fittings onto hoses to firmly grip the hose and form a tight seal. Also called interlocking hose clamps or bolt clamps, these reusable clamps fit over hoses and include bolts that are tightened or loosened with a wrench.

Steam Hose Ground-Joint Coupling Spuds

3ATP7

- Zinc-plated construction
- Max. temp. 450°F

Feature a hex bushing, making them easier to tighten with a wrench. Commonly used to connect hoses in high-pressure applications. Provide compatible threads for connecting two lengths of steam hose or for connecting a length of hose to equipment. These barbed hose fittings grip the inside of the hose to hold the fitting in place and are secured with an interlocking clamp to create a leak-resistant seal.

OETIKER®

Crimp Clamps

2-EAR HOSE CLAMPS

1-pc. design provides positive clamping action and tamperproof seal.

STEPLESS EAR CLAMPS—STAINLESS STEEL

Guarantee a 360° seal using an innovative tongue-in-groove design that leaves no steps, gaps, or unbridged parts on the inner circumference. Spring action lets clamp "breathe" without loosening; no need to retighten.

WELDING HOSE REPAIR KIT

For quick repairs to oxygen/acetylene welding lines. Includes standard jaw pincers; 40 of 9/16" 2-ear clamps; 10 of 1/2" 2-ear clamps; 6 each: 1/4" brass nipples, acetylene B left-hand brass nuts, and oxygen B right-hand brass nuts; 4 each: 9/16" twin clamps and 1/4" hose menders; and 2 each: 3/16" brass nipples and 3/16" brass hose menders.

2-EAR HOSE CLAMP KIT

Plastic case contains standard jaw pincers; 15 each: 5/16", 3/8", 1/2", 9/16", and 5/8" clamps; and 12 each: 3/4", 7/8", 15/16", and 1" clamps.

STEPLESS EAR CLAMP KIT

Plastic case contains standard jaw pincers and 10 each of 1-ear clamp sizes: 1/2", 9/16", 5/8", 23/32", 7/8", 1", 1 1/8", and 1 1/4".

JAW PINCERS

Used to close ear clamps. Made of forged steel.

BAND-IT®

Banding and Clamping Tools

BAND CLAMP TOOLS

Designed for installation of band clamps and preformed clamps.

BAND TENSIONING RATCHET TOOL

For fast tensioning of band and buckle systems. Suitable for 3/16" to ¾" banding.

CENTER PUNCH TOOLS

Apply tension to the clamp, then cut off the clamp tail after locking.

HOSE CRIMPER ADAPTER KIT

For use with hand and pneumatic tools when installing Band-it® center-punch or junior-style clamps. Suitable for ⅜" to ⅝" banding.

KIT CUTTER BLADE BACK

For use with hand and pneumatic tools when installing BAND-IT® center-punch or junior-style clamps.

SPEEDAIRE®

Stainless Steel-Body Air Cylinders

- Max. operating pressure: 250 psi (17.23 bar)
- Operating temp. range: -10° to 165°F

Can tolerate moisture and many types of lubricants and solvents. For use where magnetic sensing piston is not required. Interchangeable with Bimba, Parker, SMC, Norgren, and other major manufacturers' cylinders.

Note: 6"-stroke models also available on Grainger.com.

Double-Acting Stainless Steel Body Air Cylinders

SPEEDAIRE®

- Operating pressure range: 8 to 250 psi
- Operating temp. range: 40° to 140°F
- Include magnetic piston for use with autoswitches

Permanently lubricated, nonrepairable cylinders are dimensionally interchangeable with a variety of manufacturers' cylinders. Stainless steel tube and chrome-plated carbon steel piston rod improve corrosion resistance. Piston magnet allows autoswitches to sense stroke piston. NPT ports. Additional sizes, switches, and brackets available on Grainger.com®.

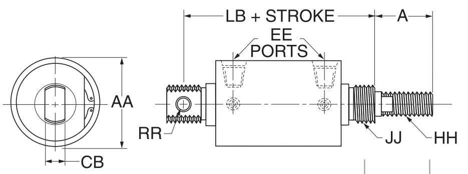
SPEEDAIRE®

Repairable Round-Body Aluminum Air Cylinders

D8463



- Double-acting
- Max. operating pressure: 150 psi (10 bar)
- Operating temp. range: -10° to 165°F

Corrosion- and abrasion-resistant hard anodized aluminum cylinders have a high-strength steel retaining ring that is easily removed for maintenance and repair. Chrome-plated steel rod. Head and caps are sealed with an O-ring static tube seal to prevent leaks. All cylinders come "switch ready".

SPEEDAIRE®

NFPA Square-Head Tie Rod Aluminum Cylinders

- Max. operating pressure: 250 psi (1½" to 6" bores)
- Temp. range: -20° to 200°F
- Include magnetic piston

Switch-ready magnetic piston cylinders have a replaceable rod gland and fully adjustable cushion to allow a full range of NFPA MS4 interchangeable mounting configurations. 4 internal-threaded sleeve nuts recessed in the head and 4 tapped holes in the cap permit direct mounting. Additional NFPA cylinders available on Grainger.com.

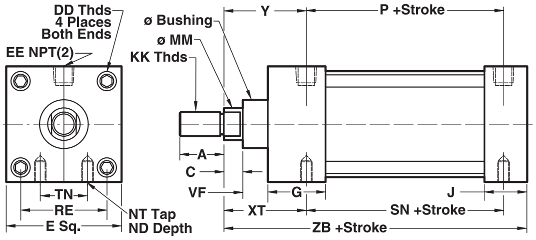
NFPA Square-Head Tie Rod Steel Cylinders



- Max. operating pressure: 250 psi
- Temp. range: -20° to 200°F

These cylinders offer full range of NFPA interchangeable mounting configurations. Cushioned cylinders have a fully adjustable cushion.

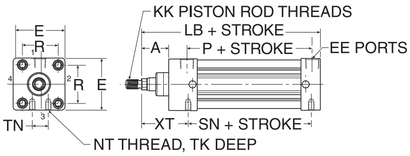
SPEEDAIRE®

NFPA Extruded Aluminum Air Cylinders



- Max. operating pressure: 250 psi
- Operating temp. range: -10° to 165°F
- Switch ready
- Cushions: standard and adjustable at both ends on 7" and larger stroke lengths

Feature industry-standard footprint, which allows interchangeability with other NFPA-style cylinders of either tie-rod or extruded construction. Advantages include clean appearance and fewer spaces for dirt and debris to collect.

SPEEDAIRE®

NFPA Square-Head Twin-Rod Air Cylinders

- Bottom-tapped (MS4) mounting holes, standard
- Max. operating pressure: 250 psi, except 1⅛" bore are 150 psi
- Temp. range: -20° to 200°F

Permanently lubricated, heavy-duty, double-acting air cylinders for applications requiring guided movement when it is critical that the piston rod not rotate. 2 piston rods prevent rods from twisting and turning off the axis, for reliable, repeatable linear motion with no need for external guides. Cylinder bearing wear is also minimized by the nonrotating twin-rod design. High-tensile strength aluminum cylinders have chrome-plated polished steel piston rods, high-strength steel tie rods, cast-iron rod bearings, and U-cup piston cylinders.

Hold-Down Pneumatic Clamps

DESTACO

For use in welding, woodworking (cutting and gluing), drilling, tapping, reaming, and assembly applications. Can be used on automated systems. Toggle-action clamps remain in locked position if air pressure is accidentally lost or hoses are disconnected. Most models are sensor-ready with provisions for mounting sensors (usually grooves) included. Enclosed clamps are designed for dirty environments where contamination can be a problem. For mechanical hold-down clamps, see pages 2319 and 2320.

L Series and PA55 Pilot and Manual Air Control Valves

- Max. operating pressure: 150 psi

Pilot—High flow 4-way valves are for use in any control circuit where air pilot signals are available. Require no electrical power to drive the valve, making them suitable for use in hazardous locations.

Manual—Lever-operated valves provide high flow; balanced spool-and-sleeve design provides easy operation, regardless of system pressure. Valves operate with lubricated or nonlubricated compressed air and are easily plumbed into the system.

Mark 55 Series Solenoid Valves, Subbase/ Manifolds, Pressure Regulators, and Accessories

Valves—Actuate by either a direct solenoid operator or solenoid pilot.
- 5.5 Cv
- Operating pressure range: full vacuum to 150 psi

Manifolds—Each manifold assembly requires 1 end plate kit (sold separately) to provide the supply and exhaust porting. Hardware for mounting valves to manifold, as well as electrical plugs for the valve to plug into the manifold base, are included.

Pressure Regulators and Speed Control Kit for Mark 55 Series—Include a plug receptacle assembly that helps reduce cost. Speed Control Kit 3JCF4 adjusts the metering of exhaust air to control cylinder speed.
- Regulators include gauge, with ⅛" NPT port

B Series Solenoid Air Control Valves, Coil Kits, and Accessories

Parker

- Max. operating pressure (valves only): 145 psi
- Min. operating pressure (valves only): 20 psi (B3, B5, and B6 series); 35 psi (B7 and B8 series)
- Max. temp. range (valves only): 5° to 120°F

Valves have a low-friction breakaway for fast response time. Low wear assures long service life.

3- and 4-Way Manual Air Control Valves

DIRECTAIR SERIES

- Max. temp. range: 32° to 175°F

Compact design for manual or mechanical operation. Feature fluorocarbon seals and a stainless steel spool for greater chemical compatibility and the ability to withstand higher temperatures.

DirectAir 2 Series operators include roller, lever, push button, plunger, and 1-way tripper spool and poppet type valves. Features space-saving mounting to provide cylinder positioning feedback.

DirectAir 4 series operators include roller, lever, button, petal, and treadle foot operated valves.

MO SERIES

- Max. temp. range: -15° to 200°F

Corrosion-resistant construction with bronze body and stainless steel spool allows valves to be used in either air or low-pressure oil applications. Closed crossover spool design minimizes compressed air waste as the valve shifts, for energy-efficient operation.

VIKING SERIES

- Max. temp. range: -40° to 158°F

Inline valves with lever operators are suitable for outdoor and transportation applications. Valves feature high flows, and dusttight and watertight construction.

42 SERIES

- Max. temp. range: 0° to 140°F

Compact inline valves are specifically made for applications that require very high flows.

Parker

Pilot-Operated Air Valves

- Temp. range: 0° to 200°F (N Series); 5° to 120°F (B Series)

Feature external pilot, wide range of flow, and low-friction breakaway. Can be run unlubricated.

ARO®

Sleeve, Shuttle, Quick Exhaust, Miniature, and Heavy-Duty Valves

- Temp. range: 32° to 160°F

Sleeve Valves—Inline valves allow 1-handed exhausting of compressed air lines using On/Off control. When exhaust ports are closed, the air line opens to actuate the air device. Sliding the sleeve in the opposite direction opens exhaust ports and shuts off the air supply.

Shuttle Valves—Connect 2 different inputs so that only 1 output is on at a time. 10 psi min. required to effect shuttle change.

Quick Exhaust Valves—Increase cylinder speed by providing quick release of exhausting air.

Miniature Air Pilot Directional Valve—Compact mini valve can be operated remotely using an air pilot signal. Shifts back to original position when signal is removed.

Miniature Manual and Mechanical Valves, Heavy Duty Composite Limit Valves, and Actuating Arms—Valves can be plumbed as normally passing, nonpassing, or multipurpose. 3-way, 2-position.

3- and 4-Way Manual, Pilot, and Mechanical Light-Duty Circuitry Valves

- Max. operating pressure: 150 psi
- Temp. range: 32° to 160°F

Light-duty actuating directional control valves power devices such as cylinders, slides, or gates. Compact body is aluminum bar construction, providing light weight. ⅛" and ¼" port valves.

Miniature Direct-Acting Solenoid Valves and Coils

ARO

Valves—Suitable for air or inert gas. 3-way, 2-position electric-to-air interface valves are solenoid-actuated with spring return and have sufficient flow for cylinders 1" dia. and smaller. Low-watt models draw 0.94W.

- **Max. operating pressure: 150 psi, except 115 psi for Low-Watt coils**
- **Max. temp. range: 0° to 122°F**

Note: Coils sold separately on this page.

Manifold Solenoid Valves

ARO

- Operating pressure range: 50 to 150 psi
- Temp. range: 0° to 180°F
- 1.2 Cv
- Up to 600 cycles/min.
- Uses 22mm coils

Offer easy valve removal and replacement. Can be used with vacuum with external pilot supply.

Note: When operating below 50 psi, Low-Pressure Kit 4HN96 must be used.

Note: Coils and connectors available separately, this page.

2G553

- Max. temp. range: -10° to 180°F
- 100% duty cycle
- Uses 22mm coils

Prelubed units can operate without air line lubrication. 1 connector required for each coil; each is its own junction box with molded connectors and gaskets to protect electrical connections. Total coil rating is 211°F which includes heat rise. 4-way K-series valves have solenoid override for easy means of setting up and troubleshooting circuits without power to the solenoids.

Note: 22mm coils and connectors available separately, see page 2549.

MaxAir Solenoid and Pilot Valves

ARO

4KA88

4KA92

- 100% duty cycle
- Uses 22mm coils

Note: 1 connector required for each coil. See page 2549 for 22mm solenoid coils and connectors.

Solenoid Valves—Compact, lightweight aluminum valves have locking or nonlocking override adjustments for simple setup and troubleshooting. Use alone or mount to manifolds (sold separately) when multiple valves are needed in a limited space.

- Max. operating pressure: 115 psi
- Temp. range: 15° to 122°F
- Buna N seals standard

Pilot Valves—Light-duty directional control valves power devices such as cylinders, slides, or gates. Compact, aluminum bar construction.

- Operating pressure range: 45 to 140 psi
- Temp. range: 15° to 122°F

Compact Stacking Solenoid and Pilot Valves

ARO

2G429

Assembled Valves with End Plate Kit

- Operating pressure range: 50 to 150 psi
- Temp. range: 0° to 180°F
- Uses 22mm coils

High flow capacity. Bonded and precision ground urethane-to-aluminum spool for wear resistance. Prelubed; can be operated without air line lubrication. Each stack of valves requires a stacking end plate kit 2G599, sold separately.

Note: When operating below 50 psi, Low Pressure Kit 4HN96 must be used.

Note: 1 connector required for each coil. Coils and connectors sold on page 2549.

Check and Needle Valves

ARO

4KE12

4KB94

- Max. operating pressure: 200 psi
- Operating temp. range: 0° to 200°F

Corrosion-resistant valve bodies are made of lightweight composite material. Threaded for panel mount. Lock rings secure set flow rate. Feature calibrated adjustment knob, 4-stage needle, color-coded micrometer, and zinc-plated pipe port inserts.

Check—Use to check or direct air in 1 direction.

Needle—Increase or decrease airflow in both directions, then set with red lock ring.

ALPHA® ARO®

Compact Body-Ported Solenoid and Pilot Valves

- Operating pressure range: 50 to 150 psi on 2-position valves; 60 to 150 psi on 3-position valves
- Temp. range: 0° to 180°F
- Up to 600 cycles per minute
- Vacuum rated to 29 in./Hg (requires kit 4HN96, sold separately on page 2549)
- Uses 22mm coils

Body-ported Alpha valves are compact 5-ported valves. Can operate without air line lubrication. For use with air or inert gas.

Note: When operating below 50 psi, Low Pressure Kit 4HN96, sold on page 2549, must be used.

Note: 1 NEMA 4 connector required for each coil. Coil connectors and replacement coils are sold separately on page 2549.

Speed, Flow, and In-Line Control Valves with Adjustable 1-Touch Fittings

- Pressure range: 15 to 145 psi
- Temp. range: 23° to 140°F
- Polybutylene body

Preapplied sealant and top-mounted hex nut/adjustment screw allows fast assembly and easy adjustment with a flat screwdriver. Use with nylon, soft nylon, and polyurethane tubing. Stainless steel models have a stainless steel stem, and can be used in washdown and clean-room applications. In-line valves include a hexagonal lock nut and retainer that prevents accidental needle loss. Elbows feature metered, 1-direction flow control.

Speed Exhaust Control Valves with 1-Touch Fittings

- Pressure range: 15 to 145 psi
- Temp. range: 23° to 140°F

Integrated quick exhaust valve and exhaust restrictor allow for high-speed cylinder operation. Design helps to remove moisture build-up at the actuator port. Nickel-plated brass construction.

legris

Function Fittings

- Metric valves have BSPP threads

Compact push-to-connect flow valves help ensure excellent performance of flow and are perfectly suited for reduced spaces. Nylon and nickel-plated brass construction, except where noted. Polypropylene push button and Buna nitrile elastomer seals for leak-free connections. For use with polyurethane, polyethylene, or PTFE tubing.

FLOW CONTROLS

Compact
- Pressure range: 14.5 to 145 psi
- Temp. range: 32° to 158°F

Adjustment screw controls airflow, while locking nut protects the flow setting from being changed due to tampering or vibration.

Swivel
- Pressure range: 14.5 to 145 psi
- Temp. range: 32° to 158°F

Allow access to vertical or angled tubing in restrictive installations.

In-Line
- Pressure range: 14.5 to 145 psi
- Temp. range: 32° to 158°F

Unidirectional airflow allows air to flow freely in through the flow control; metered out through the adjustment screw.

Miniature
- Pressure range: 14.5 to 145 psi
- Temp. range: 30° to 158°F

Specially designed for use with small-bore cylinders in very small pneumatic applications.

LOCKOUT VALVES
- Pressure range: 14.5 to 145 psi
- Temp. range: -4° to 160°F

Mount on a cylinder to cut off both supply and exhaust. Designed for maximum flow capacity in the open position. Brass material.

MINI BALL VALVES
- Max. range: 145 psi
- Temp. range: -4° to 176°F

Enable in-line pneumatic circuit opening and closing.

PILOTED NONRETURN VALVES
- Pressure range: 14.5 to 145 psi
- Temp. range: 23° to 140°F

Help protect equipment by blocking cylinder movement in a vertical or horizontal position. Valves allow the cylinder to stop in mid-stroke.

PNEUMATIC THRESHOLD SENSORS
- Pressure range: 43.5 to 116 psi
- Back pressure: 0.85 psi to 1 Bar
- Temp. range: 5° to 140°F

Detect the absence of pressure and translate it to a pneumatic output which emits a signal to pilot the next step. Sensors are compact and can be mounted on a cylinder or control valve on any pneumatic equipment to control the operation of the cylinder.

METER IN CHECK VALVES
- Pressure range: 14.5 to 145 psi
- Temp. range: 32° to 158°F

Valves are compact, lightweight, and allow air to pass in 1 direction while blocking air flow in the other. 7 psi will overcome the spring pressure.

QUICK EXHAUST VALVES
- Pressure range: 10 to 150 psi
- Temp. range: 0° to 160°F

Help increase system efficiency and the cylinder speed by purging cylinder exhaust air at the cylinder port instead of at the control valve.

Brass and Polybutylene 1-Touch Fittings

SMC

- Operating pressure range: -15 (vacuum) to 145 psi
- Temp. range: 23° to 140°F

Low disconnecting force helps prevent collet and chuck from biting into and damaging tubing. Polybutylene/brass body and threaded portion can turn independently of one another for use in confined spaces. Use with polyurethane, polyolefin, nylon, and PTFE tubing. Can be used for positive air pressure as well as vacuum for actuators, air preparation, and directional control valves.

AIGNEP

Swift-Fit Universal Flow Controls

- Max. pressure: 190 psi (fittings)
- Temp. range: 0° to 200°F

Male threads on PTC fittings are compatible with both inch and metric female thread systems. Will not strip threads on either the fitting or the component. Built-in reusable Buna thread seal for quick, low-profile installation.

Glass-Filled Nylon Push-To-Connect Fittings

legris

- Max. pressure: 290 psi
- Temp. range: -4° to 175°F
- Pkg. qty.: 10, unless otherwise noted

Stainless steel gripping ring allows you to create a secure, leak-free connection without tools; disconnects easily with the plastic release button. All threaded elbows, tees, and Y's swivel around the threaded, nickel-plated base for easy installation. Fitting bodies are a composite material—nylon and nickel-plated brass. Thread sealant is preapplied to all tapered threads. Buna N elastomer seals. Can be used with all pneumatic machines, as well as for food-processing, packaging equipment, textile machinery, robotics, and semiconductor applications. Use with semirigid nylon, flexible polyurethane, polyethylene, and PTFE tubing.

10-32 UNF threads include O-ring seal.

Swift-Fit Universal Nickel-Plated Brass Push-To-Connect Fittings

AIGNEP

- Max. pressure: 290 psi
- Temp. range: 0° to 200°F
- ⅛" to ⅜" and 3mm to 8mm fittings sold in pkg. of 5
- ½" and 10mm to 14mm fittings sold in pkg. of 3

Feature universal threads that are compatible with NPT, BSPP, BSPT, ISO 7, ISO 228, G, and J style female pipe threads. The fitting design allows you to carry only 1 thread style and helps you avoid wasting time trying to identify the thread pitch of each fitting before connecting to tubing. Buna thread seal and innovative internal lip seal helps eliminate leaks; no need to use PTFE tape or thread sealants. Fittings can be used with copper, nylon, polyethylene, and polyurethane tubing and are suitable for use in pneumatics, robotics, and water applications.

Portable 115VAC Electric Oil-Free Air Compressors

1VAN7

5Z683

45PL19

Speedaire—Has steel hotdog tank and rubber feet for added stability on uneven surfaces.

Rolair—Intake filter/silencer helps compressor operate at a quiet 60dB. Motor and pump are fully enclosed by a roll cage, for use in rugged environments. On-the-job life expectancy of approximately 2000 hr.

Thomas—Starts at 100 psi. 38-sec. recovery time.

DeWalt—Has a roll cage, 2 gauges, and a factory-installed coupler.

Porter Cable—1VAN5 has 2 couplers. Motor starts easily in cold weather; upgraded shroud has rugged carry handle.

Portable Electric Oil-Lubricated Air Compressors

22YJ55

1VAP1

11X355

Speedaire—11X355 has a cast-iron cylinder, heavy-duty roll bar, and vibration-absorbing rubber feet. 2MLW5 has an aluminum-head cylinder with cast-iron sleeve.

Rolair—Contractor-grade professional units have cast-iron cylinders and low amp-draw motors. 26JY35 and 26JY36 feature an easily maneuvered dolly cart design and a user-friendly control panel. 26JY35 also has a tool box for convenient storage.

Jenny—Unit features a heavy-duty steel tank and frame mounted on antivibration feet. Comes standard with cast-iron cylinder soft-start direct-drive pump, with safety valves, pressure regulator, and gauges.

Makita—Durable low-noise compressors feature pumps with oil-lubricated cast-iron cylinders and big-bore pistons; provide outstanding performance and fast recovery time.

DeWalt—Have a side-stack tank design, cast-iron cylinder, dual soft-start valves, and ball drain. 1VAN9 is wheeled.

Portable Electric Barrel Air Compressors

DEWALT SPEEDAIRE ROLAIR

Feature ASME code tank, pressure regulator, and 2 pressure gauges.

Speedaire®—40CF16 features 225 psi to help increase tool run time. Includes a tank safety valve and quick connect release for attaching/removing air hose. 1NNF6 feature 2-cylinder cast-iron pumps with belt-drive design.

DeWalt®—Efficient high-Pressure (EHP) pump features ball drain valve and air hose storage. Low noise at 78dBA per ISO3744.

Rolair—Induction motor design with a cast-iron cylinder. Include foam-filled tires, coupler(s), and regulator.

4NB86

6EWK6

Gas Engine-Powered Air Compressor/Generators

SPEEDAIRE

- 2-Stage (except 4NB86 is 1-stage)

Use Compressor Oil 4ZF21, sold separately on page 2568, and Engine Oil 1UBX8, sold separately. Honda engines have low-oil shutdown.

Wheelbarrow Portable—Produce up to 3500W (except 4NB86 is 1600W) with compressor off-load. Splash-lubricated compressor has cast-iron cylinders. Generator includes one 120V, 15A duplex receptacle and one 230V, 20A receptacle (4NB86 only has one 120V, 15A duplex receptacle).

Stationary—Cast-iron pumps are oil splash-lubricated. Combine 2-stage air compressor with 120V generator rated at 3500W with compressor off-load. Generator includes one 120V, 15A duplex receptacle and one 230V, 20A receptacle. 6EWK4 and 6EWK6 do not include battery and cables. 3.8-hr. full load run time.

39GC06

Compressor/Generator/Welders

SPEEDAIRE

Combine 3 separate machines in 1 unit. 2-stage air compressor is rugged cast-iron construction. Stainless steel braided discharge hose with regulator and 2 gauges for tank and outlet pressure. Generator has 120V alternator with 4500W-rated AC output (rating is offload for No. 487J39; continuous for No. 39GC06). Generator includes two 120V, 20A duplex receptacles and one 120V/240V, 20A twist-lock receptacle. Arc welder features amperage selector switch with 50A to 170A for No. 487J39, and 220A for No. 39GC06 DC voltage working range. Subaru EX 420cc OHV engine for No. 487J39 and Honda V-Twin 688cc engine for No. 39GC06, both with electric start. Battery and cables not included.

Jenny AIR COMPRESSOR, Ingersoll Rand, Chicago Pneumatic, SPEEDAIRE®

Wheelbarrow Gas Engine-Powered Air Compressors

Speedaire®—Cast-iron, oil-lubricated pump construction with 100% continuous run. Include throttle control, 2 pressure gauges, 2 quick-connect couplers, and regulator. 2YJ61 is a 2-stage compressor. Honda engine has low-oil shutdown.

Ingersoll Rand—100% continuous-duty cast-iron pump includes air regulator, gauge, and 2 quick disconnects to power multiple air tools.

Chicago Pneumatic—Heavy-duty and feature solid cast-iron cylinders for strength and aluminum heads for excellent cooling and long pump life. Include high-flow belt guards, loadless start, and engine idle control.

SPEEDAIRE®, Ingersoll Rand, Chicago Pneumatic

Stationary Gas Engine-Powered Air Compressors

SPEEDAIRE®

Models feature heavy-duty, 100% cast-iron, continuous-duty air compressor pump. Pneumatic idle control conserves fuel and extends the life of the pump. Tanks include tank drain, pressure gauge, and safety valves.

40JL42—Has easy recoil engine with low oil shut-down.

4NB85—Pneumatic idle control conserves fuel and features low-oil alert protection. Includes regulator and 2 gauges.

5F564, 4LW38, and 6EWK7—Feature low oil shut-down, 12V alternators, and recoil start option. 6EWK7 also includes regulator, outlet pressure gauge, and a flexible stainless steel braided exhaust tube.

INGERSOLL RAND

Heavy-duty, 100% cast-iron, continuous-duty compressors. Corrosion-resistant powder-coated paint finish.

CHICAGO PNEUMATIC

These service truck compressors feature heavy-duty, cast-iron pumps and include oil and filters. Full 2-yr. manufacturer's warranty on compressor and engine including valves.

Fire Sprinkler Air Compressors and Pumps

- 115/230V

Single stage with durable powder-coated finish.

Fire Sprinkler Air Compressors—Single-stage, splash-lubricated compressors are rugged cast-iron construction with a large flywheel for extra cooling and to ease start-up. Feature a directional air shroud to reduce pump temp., large canister intake filter with replaceable filter elements, totally enclosed heavy-duty belt guard, and an open dripproof motor with thermal overload protection.

- Max. pressure: 40 psi

Air Compressor Pumps—Cast-iron pumps have stainless steel valves and use synthetic oil for longer life. 35KV12 has head unloaders.

- Max. pressure: 150 psi

4B242

Base-Plate Air Compressors

SPEEDAIRE

- Designed to cycle On/Off while providing continuous air with an 80/20 duty cycle
- All compressors must be hardwired
- Max. pressure: 40 psi

2-cylinder cast-iron pumps can be used in many fire sprinkler applications (check local codes and regulations). Prewired (240V) with pneumatic control package.

HP	Free Air CFM @ Max. Pressure	Phase	Input Voltage	Amps	(F)NPT Outlet	Overall Length	Overall Width	Overall Height	Item No.

SPEEDAIRE

Climate Control Air Compressors

- 3-phase duplex units require 115V for control panel power
- Max. pressure: 90 psi
- Simplex: 70 psi On/90 psi Off
- Duplex: 70 psi On/90 psi Off (lead), 60 psi On/80 psi Off (lag)
- All compressors must be hardwired
- Horizontal tank with ¾" (F)NPT outlet and brass ball valves

Deliver published cfm at stated rpm and pressure and to be below 2 ppm in oil carryover. Use for new, replacement, or upgrade HVAC installations and instrument air applications. Simplex packages include mounted and wired magnetic starter (except 1-phase); duplex packages include mounted and wired alternator and 2 magnetic starters. For duplex models, use twice the oil capacity (Compressor Oil 4ZF21 is recommended, sold separately on page 2568).

Mobile Engine-Driven Air Compressors and Compressor/Generator

VANAIR. MOBILE POWER SOLUTIONS

Rotary screw-type with electric start. Include a lifetime manufacturer's warranty on the compressor and are Tier 4 compliant.

Removed from 414 - all skus disco with replacements in book

Viper Air Compressors—Can easily power a 90-lb. jackhammer and include a 12V cold weather protection kit. Diesel models feature an automatic variable throttle control to help reduce fuel consumption.

Viper Air Compressor/Generator—Features multi-functioning capabilities and provides air and AC power in 1 portable unit. Can run at full load for up to 4 hr. and is easy to transport via fork lift or pallet truck.

PowerFlex™ Air Compressor/Generator—Diesel-powered model provides air and AC power in one easily transportable unit. Includes a 12V cold weather protection kit.

Air N Arc® Compressor/Generator/Welder/Battery Charge System—Multifunction systems include a 12V cold weather protection kit and 25-ft. weld and boost cables. Battery boost cables are available on Grainger.com®.

SPEEDAIRE®

2-Stage Pressure-Lubricated Air Compressors

- Low rpm for long service life
- Dual control
- Pressure switch set 140 psi On/175 psi Off
- Shipped with initial fill of specially blended oil
- All compressors must be hardwired
- Max. pressure: 175 psi

Direct, positive displacement oil pump lubricates all critical internal components. Spin-on oil filter, oversized intake filter/silencer, and totally enclosed belt guard. 80/20 duty cycle. 100% duty cycle can be achieved with the use of Speedaire® Synthetic-Based Lubricant 1WG49, sold separately on page 2568.

Note: These units do not include motor starter.

SPEEDAIRE

2-Stage Air Compressors

- Expected pump life: 15,000 hr., except where noted
- 100% duty cycle (with use of synthetic oil)
- Must be hardwired
- Max. pressure: 175 psi

Deliver higher pressure than 1-stage models with low RPM for long life. Feature a totally enclosed, safety-designed belt guard. All models include an oil sight glass, pressure gauge, and pressure safety valve.

FULLY PACKAGED

The included air-cooled aftercooler can remove up to 60% of moisture from compressed air. The automatic tank drain helps remove water from the tank before it gets carried into the air distribution system. Vibration isolators help reduce operating noise and vibrational stress on the tank.

Chicago Pneumatic

Rotary Screw Compressors

20 to 50 HP models with dryer also include 1 coalescing filter.

QRS Series—Designed for continuous-duty operation at full compressor output without affecting compressor life. The 61 to 74dB sound level allows indoor installation.

- Max. pressure: 150 psi (5 to 7.5 HP, 10 HP with 60 gal. tank); 125 psi (10 HP with 120 gal. tank, 15 to 30 HP)
- Ambient temp.: 34°F to 104°F
- Belt drive

CPC, CPD, and CPBg Series—Designed with a low sound enclosure and feature whisper quiet operation, rapid single-panel maintenance, Wye-delta, reduced voltage start, and an electronic control unit that provides energy saving operation with intelligent shutdown. The 70 to 78 dB sound level allows indoor installation. Base mount.

- Max. pressure: 125 psi
- Ambient temp. 32°F to 104°F
- Gear drive: 40, 50, and 100 HP; belt drive: 60 and 75 HP

Note: See page 2567 for Maintenance Kits.

Ingersoll Rand

Rotary Screw Compressors

53RU34

Note: For Air Compressors over 50HP, go to Grainger.com® and search by "50HP Air Compressors."

R-Series Premium Tank-Mount—Feature premium-efficiency IE3 motors, sequential cooling system, and a standard microprocessor controller. PTFE stainless steel braided oil hoses, O-ring face seals, and leak-free air ends. 69dB sound level.

- Soft-starting star delta starters

UP6-Series Tank-Mount—Reliable design with dual controls and high-efficiency IE2 motors. 65 to 69dB sound level.

- Dedicated voltage ODP motors
- Full voltage starters

R-Series and UP6-Series Total Air System —Integrated compressor and dryer systems provide clean, dry air. Each horizontal tank-mounted unit includes a rotary screw compressor, refrigerated air dryer, moisture separator, coalescing and particulate filtration, receiver tank, and controls.

Rotary Screw Maintenance Kits and Accessories

Additional maintenance kits and accessories available on Grainger.com®.

INGERSOLL RAND®

Ultra Coolant—Provides 8000 hr. or 2 yr. of operation, extending maintenance intervals. Reference owner's manual to determine proper coolant type.

CHICAGO PNEUMATIC

Compressor Oil—Reference owner's manual and select oil based on service interval.
- Rotair—2000-hr. mineral-based oil
- Rotair Plus—4000-hr. blended oil

Maintenance Kits—Provide the required filters, fluids, and parts to help optimize your compressor's performance and enhance equipment longevity. Compressor oil not included.

1WG49

Lubricants

Synthetic Based—Ideal for high- and low-temperature applications. Allow Speedaire reciprocating compressors to operate at 100% continuous duty.

Specialty Blend—Nondetergent industrial oil has rust and oxidation inhibitors specially formulated for reciprocating compressors. Reduces carbon buildup.

Size	Brand	Item No.
Synthetic Based		
1 qt	Speedaire	**1WG49**
1 L	Ingersoll Rand	**2YY83**
Specialty Blend		
1 qt	Speedaire	**1WG50**

Air Compressor Start-Up Kits

Electric Motor Kits—Include All Season Select lubricant, 2 inlet air filters, and product data sheet.

Gasoline Engine Kits—Include All Season Select lubricant and inlet air filters for the compressor pump, in addition to the manufacturer's engine oil, air filter, and oil filter when appropriate.

Includes	Mfr. Model	Item No.

Lubricants for Air and Refrigeration Compressors

Renewable Lubricants—21A504 and 21A505 are a biobased/synthetic formula that can replace hydrocarbon oil-based compressor fluids. Ultimate biodegradable.

Ultimate Blue—100% synthetic, nondetergent oil features ashless antiwear additives plus rust and oxidation inhibitors.

SYNTHETIC AIR COMPRESSOR OIL

Highly resistant to oxidation and deposit formation in small portable and stationary reciprocating compressors. More sizes available on Grainger.com.

Mobil Rarus 800 Series—Recommended for single and multistage air compressors (not for breathing air applications). This oil is very effecitve for continuous high temperature operation with discharge temperatures up to 200.

Renewable Lubricants Bio-SynXtra Food Grade, Air Compressor—Biosynthetic oil is zinc-free. Provides superior antifoam, antirust, and demulsibility properties. Recommended for use in rotary, reciprocating, and centrifugal compressors.

REFRIGERATION COMPRESSOR OIL

Highly refined naphthenic base oil is suitable for reciprocating compressors (cylinders and bearings) using many types of refrigerants except sulfur dioxide. More sizes available on Grainger.com.

Renewable Lubricants Bio-SynXtra Food Grade, Refrigeration Compressor—Compatible with CO_2, ammonia, and R12 refrigerant systems.

FOOD GRADE COMPRESSOR OIL

For use in portable and stationary rotary vane and screw compressors, single-stage, 2-stage, and multistage reciprocating compressors. 36N465 features antifoam, antirust, and demulsibility properties. All items are biodegradable.

4- to 30-HP 2-Stage Air Compressor Pumps

SPEEDAIRE

- Cast-iron construction
- Stainless steel valves for long life
- Max. pressure: 175 psi
- Oil level sight glass

Splash Lubricated—Designed to cycle On/Off while providing continuous air with an 80/20-duty cycle. Rated for heavy-duty commercial use in new or replacement applications. Pumps come with large-capacity oil reservoir with sight gauge. 3Z411 includes unloader and pilot valves that allow constant speed operation or dual control. Recommended oil is 4ZF21, sold separately on page 2568.

Pressure Lubricated—Oil pump provides lubricant to all critical areas. Spin-on filter for continuous oil filtration.

3Z411

3- to 15-HP 2-Stage Air Compressor Pumps

CHAMPION

Designed for heavy-duty industrial applications. Die-cast aluminum cylinders with cast-iron sleeves for greater efficiency, cooling, and service life. Balanced, fan-type flywheels provide airflow for cooling pump. Rotation CCW facing flywheel. Splash-lubricated models feature cast iron head, cylinders, and crank shaft with stainless steel Swedish valves for rugged durability and long life.

Intercoolers efficiently dissipate heat. Include unloader and pilot valve for constant speed operation. Centrifugal unloader provides efficient pressure release for loadless starting.

Note: To determine motor pulley size: Compressor pulley x compressor rpm ÷ motor rpm = motor pulley size.

3- to 15-HP Single- and 2-Stage Air Compressor Pumps

Ingersoll Rand

TYPE 30

Durable, cast-iron cylinders, heads, and frame are designed for continuous operation with the use of Ingersoll Rand All Season Select Lubricant and extends pump life. Overhung crankshaft is precision balanced to run smoothly and quietly. 1-pc. connecting rod. Cylinders can be removed for easy repair and service. Pumps are splash lubricated.

SINGLE-STAGE

Durable, cast-iron cylinders, heads, and frame are designed for continuous-duty operation with the use of Ingersoll Rand All Season Select Lubricant.

2-STAGE

Splash-lubricated pump includes cast-iron cylinders and crankshaft. Stainless steel valves are for rugged durability and long life.

Air Tanks

NONCODE AIR TANKS

2TWC1—Formed, 1-pc. steel strap feet for maximum stability. ¼" and ½" NPT ports.

2TWC4—One ½" port, one ¼" port, and one ¼" drain port. Split-base design accommodates a variety of pumps. Some drilling may be required.

Note: Noncode tanks do not have ASME certification. Before ordering, check local and state code requirements.

ASME CODE AIR TANKS

3Z409—Includes semipneumatic 10" x 1¾" wheels; ¼", ⅜", and ½" NPT openings; and sturdy, 2-pc. pump/motor platforms.

GAS ENGINE AIR COMPRESSOR TANKS

1VW38—ASME replacement tank for Speedaire® Compressors 4B220 and 4B241. Includes one ½" NPT, one ¼" NPT, and one ¼" NPT drain ports. Tank has two 10" x 1¾" semipneumatic wheels.

1VW39—ASME replacement tank for Speedaire® Compressors 4WL38 and 5F564. Includes three ½" NPT, two ¼" NPT, and one ⅜" NPT drain ports.

Oil/Water Separators

Designed to separate emulsified compressor water and oil condensates using no electricity. Modules prevent contamination of upstream coalescing and carbon filters, extending downstream air line filter life.

control devices, LLC WILKERSON

Pneumatic-Operated Drain Valves

Automatically drain harmful condensate from compressed air systems.

CONTROL DEVICES

WaterHog—Innovative design without ½" passages to help ensure clog-free operation.

Pneumatic Zero Loss Condensate Drain—Helps powers through condensate build-up and has auto-adjust without any type of manual input. Ideal for compressor applications up to 25HP.

DRAIN-ALL

22PT26 allows greater throughput of solid debris. 22PT27 is ideal for use in old intercoolers/aftercoolers, receiver tanks, and piping where debris, rust, and scale are commonly found.

WILKERSON

For use with compressors up to 100 HP. Override feature on 5Z617 allows manual operation.

SPEEDAIRE

Zero Air Loss Drain Valves

Can discharge condensate without the loss and waste of compressed air. Electronic models have a sensor to open and close the valve, while float drains use a float mechanism to operate the valve. Valves with 90 to 260V are compatible with 115V and 230V.

Safety Valves

Adjustable Noncode—Pressure range of 25 to 200 psi. Features brass body with silicone rubber seal and stainless steel springs. 9⁄16" hex body x 1.56"L.

Adjustable Vacuum/Pressure—Easily convert from vacuum to pressure relief by reversing poppet and spring. Relieve vacuums from 0" to 30" Hg or pressure to 20 psi.

ASME Hard-Seat—Lead seal allows visual detection of tampering. Brass body, stainless steel ball on brass seat and stainless steel spring. External threads coated with thread sealant.

Note: Pressure Settings are available on Grainger.com.

ASME Soft-Seat—1-pc. brass body has resilient silicone elastomer O-ring for a leakproof seal. External threads are coated with thread sealant.

Note: Pressure Settings are available on Grainger.com.

High-Capacity ASME—Brass bodies with stainless steel springs and silicone O-ring seals.

Threaded Outlet ASME—Valves feature brass/stainless steel construction. Silicone rubber O-ring seal and lead seal.

Variable Pressure—May be used wherever a low-flow variable pressure relief valve is used. Micrometer-style scale, 0 to 100 psi. Brass body/nylon knob. Stainless steel poppet/fluorocarbon O-ring.

Check Valves

Compact—Brass body check valves, stainless steel spring, and stainless steel ball on Viton O-ring. Max. pressure: 250 psi.

Compressor In-Tank and Valves For Tubing—Brass body, fluoropolymer poppet, and stainless steel springs. Max. pressure: 400 psi. External threads coated with thread sealant. ⅛" (F)NPT tapped unloader port with removable plug.

Bronze—Valves open at less than 3 psi; withstand up to 400 psi back pressure. ⅛" tap for pressure switch unloader connection. Vertical or horizontal mounting.

Unloader and Check Valves—Brass body, PTFE seals, and stainless steel springs. Max. working pressure: 250 psi. 5A703 to 5A706 have (F)NPT inlet and (M)NPT outlet to tank. 4X996 to 4X999 are threaded to accept compression fitting at inlet.

In-line—Valves open at less than 1 psi with max. operating pressure of 400 psi. All-brass bodies with glass-filled PTFE poppets and stainless steel springs. 4X828 and 4X829 have ⅛" (F)NPT tapped port for pressure switch unloader connection.

Continuous Run Unloader Controls

Convert any pressure switch control compressor to a constant speed unloader type. Can be applied to any 30 cfm or less electric or gas engine-driven compressor. 60 to 250 adjustable psi range preset to cut in at 95 psi and out at 115 psi. Contain: pilot valve, check valve, and suction or vent unloader valve.

Oil Mist Exhaust Filters and Replacement Filter Elements

SOLBERG

- Carbon steel bowl type
- Manual drain recirculates oil back to pump
- 0.3-micron, multilayered glass media replacement elements
- Temp. range: 68° to 180°F

Exhaust filters trap oil fog, mist, or smoke from discharge of oil-flooded vacuum pumps and return oil to pump before oil mist contaminates work environment. Feature large oil holding capacity. Pleated coalescing element provides increased surface area to minimize back pressure of system and maximize filtration efficiency. O-ring seals prevent leakage.

Inlet Vacuum Filters and Separators for Blowers and Vacuum Pumps

Note: For additional standard- and extreme-duty filters, see Grainger.com®.

"L" Style Filters—Install on the inlet of any type of vacuum pump/blower. Filters have O-ring seals and polyester replacement elements. Fitlers are rated for vacuum service.

"T" Style Filters—Cast-aluminum top resists corrosion and has an integrated baffle for longer filter element life.

SOLBERG®

5JPZ5

Liquid Separators for Blowers and Vacuum Pumps

- See-through drop bucket
- Manual drain type
- Cast-aluminum head

Separate liquid, debris, and sludge from the air stream to protect pump from damage; integrated float ball cuts off airflow when the liquid level reaches max. capacity. Use with regenerative blowers in food packaging, soil remediation, and metal/chip processing applications, as well as with vacuum pumps and systems.

For Rotary Vane Air Motor Maintenance Kits, go to Grainger.com®

SPEEDAIRE®

Rotary Vane Air Motors

- Max. temp.: 250°F
- Variable speed

Use these compact, low-maintenance air motors in applications that would normally require similar, but more-expensive explosionproof electric motors. Can be operated in extreme temperatures. Cast-iron models include discharge muffler.

GAST
A UNIT OF IDEX CORPORATION

Tank-Mounted, Enclosed Oilless Air Compressors

- Field-adjustable pressure switch
- Single phase

Innovative reservoir can provide a blast of high pressure. Tank dampens pulsation from the reciprocating compressor.

All models except 5Z671 incorporate a Gast piston compressor pump listed below. Pressure switch setting: 70 psi-On/90 psi-Off. 5Z671 has 30 psi-On/50 psi-Off. Gray finish.

⅛- and 1/6-HP Compressors—Include pressure switch, manual drain, pressure safety valve, pressure gauge, and globe valve.

⅓- to 1½-HP Compressors—Include coded tank, pressure switch, manual drain, pressure safety valve, pressure gauge, and globe valve. 5Z676 has magnetic starter.

Rotary Vane Compressors and Vacuum Pumps

GAST — A UNIT OF IDEX CORPORATION

- Oilless design
- Permanently lubricated and sealed bearings
- Self-adjusting, self-lubricating vanes

For general continuous-duty vacuum and low-pressure applications. 3KYY4, 4F740, 4F741, 4F742, 4TF21, and 4TF22 have integral mufflers and filters, as well as international multivoltage, dual-frequency motors. All units are single phase except for 2CJG8 and 4TF21; single-phase units have thermal overload protection. 4Z470 and 4Z469 include coupling and coupling guard. Mount directly to 56C frame motors.

Note: When used for pond aeration, include the appropriate check valve in discharge line to prevent water from entering pump in case of power failure.

Piston Air Compressors/Pumps

GAST A UNIT OF IDEX CORPORATION

- Max. pressure: 100 psi

Shaded pole motors have automatic thermal protection. Rated for continuous duty. Corrosion-resistant sandwich valve stops foreign particles from lodging on valve seats. Aluminum cylinders and cylinder heads. Thermally protected motors with high torque start windings (except 5KA88, 5KA89, and 2CJH3). Gray finish.

THOMAS by Gardner Denver

TA Series Air Compressors/Vacuum Pumps

Powerful pumps feature a 1725 rpm motor with permanently lubricated, sealed ball bearings. Automatic reset thermal protection. ¼" (F)NPT outlet.

TA SERIES, HIGH-FLOW, 2-STAGE

Capacitor-start, high-torque motor features heavy-duty piston, cast-iron cylinder sleeves, and low-lift reed valves. Allows for direct coupling of pressure switch, eliminating need for air tank.

Lubricated Rotary Vane Vacuum Pumps

Elmo Rietschle
A Gardner Denver Product

- NEMA Premium motors
- Oil sight glass

Single-stage, oil-flooded units are direct driven. Oil-free discharge through large droplet separation followed by oil mist filters. Gas ballast. Also include fine mesh filter, vacuum nonreturn valve, and initial fill of oil.

Vacuum Pump Oils

Oils meet rigid requirements for vapor pressure, stability, and viscosity. Tested for high vacuum levels. 3HDP8 is specifically formulated for Gast lubricated rotary vane air motors and rotary vane compressors/vacuum pumps. 6D753 is synthetic oil, recommended for corrosive gas applications.

Corrosive Environment Vacuum Pumps

- Ultimate pressure Torr 1 x 10-4

2-stage high-vacuum pumps are used for pumping corrosive gases to pressures below 1 Torr (1mm of Hg). Vane springs, valves, pressure tubes, and oil baffle are made of stainless steel. Oil case is PTFE lined. Nitrogen purge helps reduce corrosion. Gas ballast valve inhibits vapor condensation. Low rpm reduces friction wear. Large oil reservoir dilutes contaminants.

3Z655

DuoSeal®
Standard High-Vacuum Pumps

- Large oil reservoir
- Continuous duty with thermally protected motors
- Ultimate pressure Torr 1 x 10^{-4}

Low pump rpm (400 to 580 rpm). Pumps operate 20°F cooler than many high-rpm direct-drive pumps. All-metal internal construction and 2-stage rotary valve design.

Contoured molded belt guard and base on 3Z655 and 3Z656 for quieter operation. Gas ballast inhibits condensation inside pump. Factory wired for 115V operation. Intake filter screens. Belt guard, base, motor with On/Off switch, and 3-wire cord. Blue/gray finish. Oil included.

ChemStar® Dry Oilless Deep Vacuum Pump

- Chemical duty

Robust dry vacuum pump provides a deep vacuum in extremely harsh chemical applications. Delivers deep vacuum with max. flow of 150 L/min. (9 cfm) at 2 Torr making it ideal for many evaporative processes. Use with freeze dryers, vacuum ovens, and other light industrial applications. 115V, 60 Hz. Inlet/outlet connection: NW 25.

Commercial and Industrial Refrigeration Service Pumps

WELCH by Gardner Denver DuoSeal®

5Z025

Designed for removing air and moisture from industrial and commercial chillers. Vacuum pumps are rated for low-micron Hg vacuum, continuous duty. Pumps include a gas ballast valve that inhibits condensation reducing corrosion, On/Off switch, 3-wire cord, and oil.

DuoSeal® Belt-Drive—All-metal internal construction and low pump rpm provide long service life. Large oil reservoirs dilute contaminants. Come complete with base, belt, belt guard, and motor. 5Z025 also includes carrying handles.

Application	Tonnage	Item No.	Pump Capabilities

Air Amplifiers and Air Amplifier Kits

4NUW9

4LCX3

- Pressure range: 5 to 120 psi
- Temp. rating: 275°F for aluminum; 400°F for stainless steel

Compact, lightweight, and portable amplifiers run on compressed air so electricity is not required. Both the vacuum and discharge ends can be ducted, making them excellent for drawing fresh air from another location or moving smoke and fumes away. High-efficiency amplifiers feature an exact air gap; adjustable amplifiers can be adjusted up to 0.010" at 80 psi. Kits include shim set, filter separator, pressure regulator, and filter/regulator mounting hardware.

Air Conveyors and Air Conveyor Kits

4LCN9

- Pressure range: 20 to 250 psi
- Temp. rating: 275°F for aluminum; 400°F for stainless steel and hardened steel alloy

Connect conveyors to common hose or duct to move large volumes of material over long distances with a small amount of compressed air. Kits include mounting bracket, filter separator, pressure regulator, and filter/regulator mounting hardware. Pressure regulator makes it easy to control the material flow rate. Ideal for bulk material and scrap.

Hardened Steel Alloy—Heavy-duty conveyors can move more material over longer lengths. Hardened steel alloy won't wear prematurely and can withstand abrasive material applications.

EXAIR®

Enclosure Coolers

- Pressure range: 80 to 120 psi
- Temp. rating: 125°F

Convert compressed air into cold air to keep enclosure from overheating. Units include thermostat, solenoid valve, filter, and cold air distribution kit. Side-mount kits are for use where space is limited on the top or sides of enclosure.

For Use With Grainger Item Number	Item No.

FUJI

Regenerative Blowers

Industrial-duty, oilless air blowers can be used for pressure or vacuum. Flow without pulsation at low noise levels and are dynamically balanced to eliminate vibration. Equipped with continuous duty TEFC motors, aluminum alloy impeller, mounting base, and housing. Use as original equipment or for upgraded performance. Pneumatic air tube conveying systems, vacuum cleaning systems, vacuum lifting, vacuum hold down, vacuum transport, bottle filling stations, printing presses, screen printing, air cushion tables, drying systems, weld fume extraction, textile machinery, dental equipment, waste and water fish pond aeration, aquarium aeration, aeration plating tanks, and air knife systems. For use with air and noncombustible, noncorrosive, nonexplosive gases.

Note: A vacuum or pressure relief valve (sold separately) is required for proper operation.

Performance ratings shown are rated with motor running at 60 Hz. If 50 Hz is used, deduct ⅙ from rating. Min. cfm ratings are at continuous flow. Relief valves are mandatory for flow conditions that are under min. or less.

Conversions: to psi = (in. of water x 0.036); to in. Hg = (in. of water x 0.074).

High-Pressure Turbo Blowers—Cast-aluminum blower housings and enclosed impellers provide higher pressure capabilities than centrifugal blowers.

Rebuild Kits—Contain all the essential parts needed for routine maintenance: silencer assembly, bearing shims, bearings, and shaft seal.

Inlet Filters with Replaceable Covers

Filters have perforated outer cylinders; inner cylinder is wrapped with fine 0.009" mesh screen. Replaceable filter covers are made of ⅞"-thick, 100% polyester filter media. They provide 80% efficiency to 5 microns and are for use with Fuji, Gast, Rotron, Siemens, and Spencer regenerative blowers.

SPEEDAIRE®

Positive Displacement Blowers and Vacuum Pumps

Drop-in replacements for various roots-type blowers and vacuum pumps. Used in various industrial applications such as pneumatic conveying, wastewater treatment, surface cleaning, and dairy milking. Handle continuous loads. Alloy steel timing gears assure nonslip timing. High-strength drive shaft provides greater blower durability and installation flexibility. High-strength cylinder with heat-dissipating fins for reduced noise and vibration. High-temperature seals provide leak-free operation in severe-duty applications. Blowers are available in horizontal and vertical configurations.

Air-Cooled Aftercoolers

AKG®

- Aluminum bar/plate material
- Max. pressure: 250 psi
- Mounting legs included

Remove harmful water, oil, and contaminants from compressed air systems. Compatible with most rotary and piston air compressors. Hollow profile reduces local peak strains, which significantly increases cooler service life. Internal and external fins optimize cooling power.

ISO 8573.1 Air Quality Classes

Maintaining air quality is so important that the International Standards Organization (ISO) developed 6 compressed air quality classes, as defined by ISO 8573.1. Testing methodology established at 100°F inlet temperature, 100°F ambient temperature, and 100 psig.

3YA51

SPEEDAIRE® Hankison®

Refrigerated Air Dryers

SPEEDAIRE® SERIES

3YA49 and 3YA50 include an illuminated On/Off switch, high-efficiency separator, and no air loss float drain. 3YA51 to 3YA53 include an illuminated On/Off switch, high-efficiency separator and timed electric drain.

HANKISON® SERIES

Fully automatic operation ensures maximum moisture removal. Easily installed units come preassembled with quality components for long service life. All units with max. air compressor HP over 25 include a coalescing filter and auto-drain. 3YA43 and 3YA44 include high-efficiency separators without air loss, Power On light, and 6-ft. power cord. 3YA45 includes On/Off switch, Power On light, dew point indicator, and 6-ft. power cord.

53RG55

SPEEDAIRE

Refrigerated Compressed Air Dryers

- ISO Class: 5*
- Max. incoming pressure: 232 psi
- Max. inlet temp.: 122°F
- 115V
- 6.1 full-load amps

Refrigerated compressed air dryer helps to dry air by passing it through a refrigerated heat exchanger. By cooling the air that enters the compressor, the dryer allows water vapor to condensate and drain out. Providing dry air can help protect your pneumatic piping, tools, and equipment. Also features digital controller and power saving low-pressure drop.

Max. Air Compressor HP	CFM	Max. Pressure	Full Load Amps	Pipe Size	Overall Height	Overall Width	Overall Depth	Item No.

Ingersoll Rand

60YR69

2HUE1

Refrigerated Cycling Air Dryers

- ISO Class: 4*

Refrigeration compressor turns off during periods of reduced loads to match actual compressed airflow, drawing only the energy required to provide continuous-pressure dew point performance. Innovative centrifugal separator allows high moisture separation and removal. Unwanted water from the air is discarded through a timed condensate drain.

Ingersoll Rand

Heatless Twin Tower Regenerative Desiccant Air Dryers

- ISO Class: 2*
- Max. working pressure: 150 psi
- Max. inlet temp.: 120°F
- 115V
- 5.0 full-load amps

1-phase units feature advanced microprocessor controllers and include prefilters and afterfilters to remove oil and contaminates. NEMA 4 enclosure protects controller against water and condensation. Easy desiccant change. Switching valves direct wet inlet air between the 2 towers to provide a continuous supply of dry air. Diagnostic controls show regenerative sequence status.

SPEEDAIRE®

Disposable In-Line 4-Stage Desiccant Filter/Dryer

Ideal for paint-spraying applications. Removes dust, dirt, water vapor, and oil aerosols that may have bypassed main air filtration system. Blue desiccant bead lowers dew point to -40°F and removes all water vapor. Replace filter when blue beads turn pink. Bidirectional flow.

3¾" x 1¹¹⁄₁₆" dia. ¼" NPT with female inlet and male outlet; can be attached at either end. 15 cfm.

2YNL6

Desiccant Air Dryers

SPEEDAIRE® WILKERSON®

Ideal for drying small volumes of air at the point of use. Protect branch lines exposed to temperatures below freezing. Convenient in-line mounting saves space. Premeasured desiccant packaged in convenient, easy-to-use bags for less waste.

Multistage Desiccant Dryers—All-in-one units also contain activated charcoal to remove oil and oil vapors. Suitable for paint spray applications including waterborne paints. Dew point to -30°F. 4UDK5 and 2YNL7 are 4-stage dryers. 2YNL6 is 5-stage.

4HEP3

Membrane Air Dryers

Hankison® Parker

2DBB5

Hankison® HMM Series—Units constantly exhaust extracted water vapor into the ambient surroundings. NEMA 7 Hazardous Environments. Grade 5 high-efficiency oil removal prefilter included.

- ISO Class: 2 to 6*
- Max. inlet temp.: 150°F
- Max. ambient temp.: 150°F

Hankison® SSM Series—Digital purge control governs a 2-way valve to control the venting sweep air, for applications where processed air demands start and stop. Grade 5 high-efficiency oil removal prefilter included.

- ISO Class: 2 to 6*
- Max. inlet temp.: 150°F
- Max. ambient temp.: 150°F

Parker AD Series—No electricity required; safe for hazardous environments (NEMA 7). Auto drain, water separator, and Grade BX coalescing filter included. Average membrane life: 15 yr.

- ISO Class: 4 to 6*
- Max. inlet temp.: 120°F
- Max. ambient temp.: 120°F
- +35°F dew point (at rated flow)

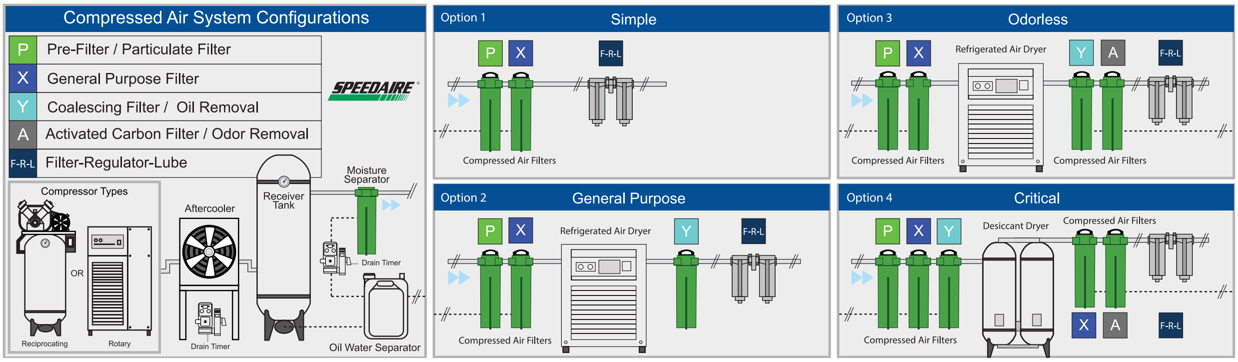
Compressed Air System Configurations



4GNL4

Condensate Separators

SPEEDAIRE WILKERSON

Feature a centrifugal airflow pattern that helps remove bulk contaminants from the compressed air stream. Low pressure drop. Separators equipped with auto drain automatically discharge condensate and dirt.

Note: For additional sizes, go to Grainger.com and search by "Condensate Separators".

Hankison

Air/Liquid Bypass Valve

Service components without shutting down the system; simply push 1 button to change modes. Push-button can be locked in place to make valve tamperproof. Inlet and outlet fittings are compression type with rubber ferrule. Ideal for most brands of refrigerated dryers, 5 to 15 cfm. Can be used with liquid and gases compatible with nylon, Buna N, and brass.

SPEEDAIRE®

Compressed Air Filters

- Aluminum filter bowl
- Include drain

Efficiently remove oil, oil vapor, particulates, water, and other contaminants. Units feature aluminum body with epoxy powder-coated finish. Tie Rod filters use a threaded post-mounted element. Zero Clearance filters use a drop-in cartridge and require no vertical clearance. Activated Carbon filters are not intended for removing carbon dioxide or carbon monoxide.

3-Stage Sterile Air Filter Assembly
4HEU2

Parker

Multistage Sterile Air Filter Assemblies

- Max. pressure: 250 psi
- Max. temp.: 130°F
- 2 ports

Complete 3-stage sterile air systems feature integrated prefilter assembly that includes high-efficiency coalescing filter for removal of liquid and solid contaminants, automatic drain, and a color-coded differential pressure measurement to indicate filter changes. The final-stage sterile air grade filter removes all viable organisms. Individual components are also available separately. Sterile air filters do not require drains.

Pneumatic Air Filters and Replacement Elements

Ingersoll Rand

- Max. pressure: 250 psi
- Max. temp.: 176°F
- ½" NPT drain port
- Auto float drain type

Filter media repels water and oils to provide extended filter life and minimized pressure drop across the filter element. Include filter element service indicator.

SPEEDAIRE®

Oil Removal (Coalescing) Filters

- Filters to 0.01 microns
- Service life indicator is standard (except miniatures)
- Max. pressure: 150 psi (polycarbonate bowl); 250 psi (metal bowl)
- Max. temp.: 125°F (polycarbonate bowl); 150°F (metal bowl)
- Modular connector allows easy removal and replacement

For maximum life, use in conjunction with a general purpose air line filter equipped with a 5-micron element.

Note: Polycarbonate bowls are not recommended for use in atmospheres containing chemicals such as acetone, benzene, carbon tetrachloride, ethylene dichloride, gasoline, toluene, and/or air compressor systems using synthetic fire-resistant lubricants.

General Purpose Regulators

- Max. temp. 150°F on miniature and compact units, 175°F on intermediate, standard, and heavy-duty regulators
- Modular connector allows easy removal and swap out

Feature 2 full-flow gauge ports. T-handle adjustment is optional. Manifold regulators provide multiple pressures from a common inlet.

WARNING: Do not connect regulator to bottled gas.

In-Line Lubricators

- Polycarbonate bowl: 150 max. psi; 125°F max. temp.
- Metal bowl: 250 max. psi; 175°F max. temp.
- Modular connector allows easy removal and swap out

Lubricators maintain a constant oil-to-air density over a wide range of flow. An integral flow sensor provides proportional control.

Note: Polycarbonate bowls are not recommended for use in atmospheres containing chemicals such as acetone, benzene, carbon tetrachloride, ethylene dichloride, gasoline, toluene, and/or air compressor systems using synthetic fire-resistant lubricants.

SPEEDAIRE®

Micromist—Provides lubrication for multiple pneumatic tools/devices. Comes equipped with a red 360° sight/feed dome.

- Up to 50-ft. pipe runs

Mist—Ideal lubrication for a single tool/device. Includes a green 360° sight/feed dome.

- 15- to 20-ft. pipe runs

7D736

SPEEDAIRE®

2- and 3-Pc. Combination Units

- Modular connector allows easy removal and swap out

2-pc. units combine filter/regulator with MicroMist or Mist lubricator. 3-pc. units combine filter, regulator, and MicroMist or Mist lubricators. Include Speed Clamps™, mounting brackets, and pressure gauge. 4ZM01 to 4ZM03 and 4ZL99 do not include mounting bracket or gauge. Some assembly required. For replacement filter elements, see page 2594.

Note: Polycarbonate bowls are not recommended for use in atmospheres containing chemicals such as acetone, benzene, carbon tetrachloride, ethylene dichloride, gasoline, toluene, and/or air compressor systems using synthetic fire-resistant lubricants.

Modular Connectors

- Allow easy removal and replacement of Speedaire® components

Use Speed Clamps™ instead of pipe nipples to interconnect components.

Modular Pneumatic Lockout Valves—3-way function valves can be padlocked in the closed (vented) position only. Installed in the pressure inlet of pneumatic devices.

Porting Blocks—Provide 3 auxiliary ¼" NPT outlets to pipe high-pressure or nonlubricated air.

Manifold Blocks—Permit 90° attachment of additional system components such as filters, regulators, or pressure switches.

WILKERSON

General Purpose Filters

- High-efficiency 5-micron filtration

Rugged, lightweight construction with high-flow capability and excellent water removal efficiency. Have a positive bayonet bowl latch and barbed manual drain connection with pipe-away.

Note: Models with a polycarbonate bowl should not be located in areas subject to direct sunlight, direct impact, or temperature outside rated range. Incompatible with chlorinated hydrocarbons, ketones, esters, and certain alcohols. Not for use in air systems where compressors are lubricated with fire-resistant fluids such as phosphate ester or diester. Should not be used where strong acids or bases are present or in salt-laden atmospheres.

For Use With	Includes	Item No.

WILKERSON

General Purpose Regulators

- Accuracy: ±1 psi

2-gauge ports can be used as additional regulated outlet ports. Can be serviced without removal from air line. Dial regulators feature a transparent, pressure-calibrated, nonrising adjustment dial for quick adjustment of secondary pressure, ±1 psi. Can be mounted in any position so dial face is always visible.

WARNING: Do not connect regulator to bottled gas.

*† cfm flow measured with 100 psig inlet adjusted to a set pressure of 90 psig and a 15 psig pressure drop. * The working range of knob adjustment is designed to permit outlet pressures within their full range. Pressure adjustment beyond this range is also possible because the knob is not a limiting device. This is a common characteristic of most industrial regulators, and limiting devices may be obtained only by special design.*

In-Line Lubricators

- Polycarbonate bowl: 150 max. input psi; 125°F max. temp.
- Metal bowl: 250 max. input psi (except jumbo units are 200 max. input psi); 150°F max. temp.

Install unit close to the application to ensure effective oil distribution.

Note: Should not be located in areas subject to direct sunlight, direct impact, or temperatures outside rated range. Incompatible with chlorinated hydrocarbons, ketones, esters, and certain alcohols. Not for use in air systems where compressors are lubricated with fire-resistant fluids such as phosphate ester or diester. Do not use cleansing agents such as acetone, benzene, carbon tetrachloride, gasoline, toluene, etc. Should not be used where acids or bases are present or in salt-laden atmospheres.

Two-piece design integrates filter/regulator and lubricator into a single unit. Three-piece design combines filter, regular, and lubricator. Units with a metal bowl and sight gauge provide visibility into the bowl. Units with a polycarbonate bowl have a guard with multiple viewing slots into the bowl. For replacement filter elements, see pages 2596, 2597.

Parker

Nonrising Knob Regulators

Suitable for use where regulators are not easily accessible. Ideal for use in applications requiring a constant pressure with variable flow rate.

WARNING: Do not connect regulator to bottled gas.

*† cfm flow measured with 100 psig inlet adjusted to a set pressure of 90 psig and a 15 psig pressure drop. * The working range of knob adjustment is designed to permit outlet pressures within their full range. Pressure adjustment beyond this range is also possible because the knob is not a limiting device. This is a common characteristic of most industrial regulators, and limiting devices may be obtained only by special design.*

Piggyback Air Line Filter/Regulators

- 5-micron filter element
- Metal bowl/sight glass
- 150°F max. temp.
- Adjustment range: 0 to 125 psi

Compact units are made of die-cast zinc.

WARNING: Product rupture can cause serious injury. Do not connect regulator to bottled gas. Note: Should not be used where strong acids or bases are present or in salt-laden atmospheres.

In-Line Lubricators

- 250 max. input psi; 150°F max. temp.

Install close to the application to ensure effective oil distribution. Zinc bowl.

Note: Should not be located in areas subject to direct sunlight, direct impact, or temperatures outside rated range. Incompatible with chlorinated hydrocarbons, ketones, esters, and certain alcohols. Not for use in air systems where compressors are lubricated with fire-resistant fluids such as phosphate ester or diester. Do not use cleansing agents such as acetone, benzene, carbon tetrachloride, gasoline, toluene, etc. Should not be used where acids or bases are present or in salt-laden atmospheres.

2- and 3-Pc. Combination Units

Parker

- 5-micron particulate filter
- Max. pressure: 250 psi
- Max. temp.: 175°F, except 21U832 to 21U835 are 150°F

Feature either a manual or automatic drain to remove collected water from filter bowl. Provide long life and accurate pressure regulation. Units have die-cast zinc bowl and included gauge. Easy to install in most pneumatic systems. Metal bowl kits available on Grainger.com®.

Continental ContiTech

Carboxylated Nitrile Bulk Air Hose

- Max. pressure: 500 psi
- Temp. range: -20° to 210°F
- 4:1 safety factor

Reinforced with Flexten fiber yarn to resist bending and pressure stresses. Yellow Carbryn synthetic rubber cover is nonconductive and has high abrasion resistance. Assemblies have steel (hydraulic type) couplings. Tube is made with innovative oil-resistant ChemiGum synthetic rubber.

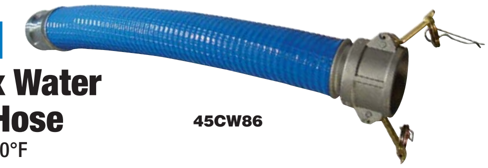
EATON

Royalflex Water Suction Hose



45CW86

- Max. temp.: 180°F

Thermoplastic vinyl nitrile tube with polyester braid and helical wire reinforcement is ideal for heavy water applications including the transfer of water, liquid diluted fertilizers, and pesticides. Hose is also suitable for suction and discharge of water and slurries.

45DU77

Marine Exhaust Water Hose

- Temp. range: -40° to 250°F

This soft wall hose can be used as a straight connection in a wide range of water transfer and discharge applications. Constructed from black EPDM tubing and cover with reinforced polyester cord for added strength. The extreme temperature range makes hose ideal for marine wet exhaust systems. Various sizes allow a tight fit over standard pipe permitting secure pipe-to-pipe connections and vibration absorption. Meet SAE J2006R1 standard.

Washdown Water Hose

- Max. pressure: 300 psi

Efficiently and hygienically handles equipment cleaning in food processing plants, dairies, paper mills, and other industrial operations.

White—EPDM tube with a white EPDM cover. 2P570 has tapered nozzle at one end and a ¾" long shank brass female fitting, double-banded, on the other end. Garden hose threads.

White with Antimicrobial—Synthetic rubber hose has a white EPDM rubber cover with antimicrobial protection and spiral textile reinforcement. Resists oils and animal fats found in food processing plants, dairies, canneries, and creameries.

Yellow with Antimicrobial—Carbryn-covered yellow synthetic rubber resists oil and abrasion; provides max. protection against oil and animal fats. Outside cover incorporates antimicrobial protection.

Water Discharge Hoses

Continental ContiTech

Also known as water pump discharge hoses, they can be connected to a pump to move water away from a location or source. Water discharge hoses typically lay flat when not in use and are suitable for use in construction, mining, agricultural, and industrial water-removal applications. Hoses with fittings include a gasket.

HOSE ASSEMBLIES

Hose assemblies have fittings installed on both ends for connecting the hose to compatible equipment. Bulk hoses can be cut to the desired length, and compatible hose fittings can be added to the ends of the hoses to create custom hose assemblies.

PVC Hose Assemblies with Synthetic Fabric Reinforcement—For use in low-pressure open-end water discharge service and have fittings installed on both ends for connecting the hose to compatible equipment.

PVC/Nitrile Hose Assemblies with Synthetic Yarn Reinforcement—They are fire-resistant and are suitable for pumping and water-removal in construction, mining, and agricultural applications. The hoses' tube is made from PVC and nitrile and has limited oil and chemical applications.

SBR/Natural Rubber Hose Assemblies with Polyester Jacket Reinforcement—Suitable for use in open-end water discharge with fittings installed on both ends for connecting the hose to compatible equipment.

BULK HOSES

Bulk hoses can be cut to the desired length, and compatible hose fittings can be added to the ends of the hoses to create custom hose assemblies.

Water Suction and Discharge Hoses

Have a rigid reinforcement that helps the hose keep its shape when not in use and prevents it from collapsing in suction applications. Used to vacuum (suction) or pump (discharge) water from one location to another in construction, mining, agricultural, and industrial applications. Hoses with fittings inlcude a gasket.

HOSE ASSEMBLIES

These hose assemblies have fittings installed on both ends for connecting the hose to compatible equipment. Bulk hoses can be cut to the desired length, and compatible hose fittings can be added to the ends of the hoses to create custom hose assemblies.

EPDM Hose Assemblies with EPDM Cover with Spiral-Plied Synthetic Fabric and Wire Helix Reinforcement—Used with engine-driven dewatering and trash pumps for transferring water from tanks, trucks, and pits or other places where water may accumulate. Suitable for medium- to heavy-duty construction, mining, agricultural, and industrial applications.

EPDM Hose Assemblies with Spiral-Plied Synthetic Fabric Reinforcement—The EPDM (ethylene propylene diene monomer) material provides excellent resistance to ozone and abrasion as well as good resistance to heat and chemicals. Suitable for use in pumping water in quarries, mines, construction sites, and other abrasive environments.

Polyethylene Hose Assemblies with Polyethylene Double Helix Reinforcement—Assemblies are for use in vacuuming or pumping water in waste-evacuation, septic-pumping, and sewer-cleaning applications.

PVC Hose Assemblies with Rigid PVC Helix Reinforcement—Suitable for use in septic-tank cleaning operations and for general industrial and agricultural applications that require a hose with mild chemical resistance.

PVC Hose Assemblies with Synthetic Braid and PVC Helix Reinforcement—Hoses feature a smooth interior that helps keep material from building up in the hose. The PVC material also provides good resistance to chemicals.

Thermoplastic Rubber Hose Assemblies with Polyethylene Helix Reinforcement—Thermoplastic rubber hoses stay flexible in cold weather and resist most chemicals used in the agricultural and sanitation industries. For use in vacuuming or pumping water in waste management, construction, agricultural, marine, and manufacturing applications.Bulk HosesBulk hoses can be cut to the desired length, and compatible hose fittings can be added to theends of the hoses to create custom hose assemblies.

BULK HOSES

Bulk hoses can be cut to the desired length, and compatible hose fittings can be added to the ends of the hoses to create custom hose assemblies.

Multipurpose Barbed Hose Fittings

- Hose barb x MNPT connection

Designed for low-pressure suction and discharge service in transporting air, water, and chemicals. Threaded end is same size as hose. Barbed combination nipples have raised ridges (or barbs) on one end that grip the inside of hoses to hold them in place. Rigid barbed hose fittings connect hoses to pipe in multipurpose hose assemblies. **316 Stainless Steel fittings** have higher corrosion resistance than other types of stainless steel hose fittings. Used in saltwater and chlorine environments. **Aluminum and Carbon Steel fittings** are suitable for low-pressure applications in the food and beverage, marine, and chemical processing industries. **Steel fittings** are plated to resist corrosion. **Polypropylene fittings** have good resistance to abrasion and chemicals. Can be used in fertilizer, herbicide, and insecticide handling applications, as well as for industrial applications, such as waste, saltwater, and cooling water handling.

EATON

Multifuel Transfer Hose

- Max. pressure: 150 psi
- Temp. range: -40° to 180°F
- Brass fittings

Vinyl nitrile hose and cover are designed to handle a wide variety of petroleum-based fuels including diesel, gasoline, and kerosene. Coupled with corrosion-resistant brass fittings and reinforced with multi-ply fiber cords and a dual helix with static wire.

Continental ContiTech

2P035

Steam Hose

- Max. pressure: 250 psi
- Temp. range: 0° to 450°F
- Reinforced double-wire braid (½" hose has single-wire braid)

Designed for cleaning, heat control, fire prevention, purging, thawing, blow-out service, steam pumps, and hoists in open-end or permanent installation operations. Cover and tube are synthetic rubber. Assembled hose fittings are clamped. Crimp-coupled hoses offer a smooth grip for operator comfort. Zinc-plated steel female coupling spuds are available separately.

4KT61 and 4KT62 include a female wing nut. A female or male spud may be needed to complete the assembly. Bulk hose can use fittings and clamps on page 2531.

Gasoline/Fuel Transfer Hose

- Aluminum fittings
- Temp range: -40° to 180°F

PUMPFLEX I, SOFTWALL

Suitable for curb pump self-service stations and highly sensitive electronic fuel pumps. Durable construction resists deterioration from fuel, ozone, sunlight, and cracking around/behind the nozzle end coupling.

PUMPFLEX II, HARDWALL

Hose is designed for curb pump self-service stations and suitable for highly sensitive electronic fuel pumps where an extremely durable hose is required. Features a wire reinforcement for added strength.

Chemical Hose Assemblies

- Temp. range.: -65° to 450°F

These PTFE (polytetrafluoroethylene) chemical hose assemblies are used in the cosmetics, pharmaceutical, chemical, and food industries. They comply with FDA requirements for use with food products. The hoses' PTFE tube provides excellent temperature and chemical resistance and maintains its integrity after exposure to thermocycling processes. The PTFE tube also has a low coefficient of friction to maintain high flow rates and provide easy cleaning. The hoses' EPDM (ethylene propylene diene monomer) cover provides excellent resistance to ozone and abrasion and offers good resistance to heat and chemicals.

PTFE Chemical Hose Assemblies with (M)NPT Fittings—These hoses have male NPT (National Pipe Taper) fittings on their ends. The fittings have tapered threads that create a tight seal when connected to compatible equipment.

PTFE Chemical Hose Assemblies with (F) JIC Fittings—These hoses have female JIC (Joint Industrial Committee) fittings on their ends. JIC fittings have straight threads and a 37° flare seat that create a tight seal when connected to compatible equipment.

Chemical Hose

- 4:1 safety factor

CHEMFLEX

- Max. pressure: 500 psi for 44ZF07, 44ZF59, 44ZF87, 44ZF82; 450 psi for 44ZF23, 44ZE84; 300 psi for 44ZG01, 44ZG21
- Temp range: -40° to 300°F continuous
- Blue color

PTFE constructed hose with EPDM cover is chemical-resistant and handles a broad range of temperatures. For use in the cosmetics, pharmaceutical, chemical and food industry where chemical compatibility is critical.

CHEMCAT™

- Max. pressure: 300 psi
- Temp range: -40° to 250°F
- Green color

Ultra-High Molecular Weight Polyethylene (UHMW-PE) tube handles acids, chemicals, solvents, and petroleum products. Green EPDM cover helps protect the fiber reinforcement and helix wires from harsh industrial environments.

Material Handling Hose

PVC/Thermoplastic—Handles abrasive materials including cement, fertilizers, fly ash, glass, gravel, metals, plastic pellets, rock salt, sand, and slurries where material may have some moisture. Meet RMA Class B standard.

Thermoplastic—For use in the dry pneumatic conveying of highly abrasive solids.

Dry Bulk—Ideal for transferring dry abrasive materials such as bottle caps and cleaning agents. Suitable for use in coal plants, dry cement operations, in-plant transfer, and well service applications.

Hot Air—For use in construction, hot air blowing, in plant, and non-oily applications. Can be use for dry cement and tank truck delivery operations.

Nutriflo PVC Food & Beverage Hose Assemblies with Smooth PVC Cover

- Temp. range: -25° to 230° F
- Safety factor: 4:1

Nutriflo PVC (polyvinyl chloride) food and beverage hose assemblies have a smooth PVC cover and are suitable for transferring dry foods and liquids in gravity-flow and vacuum-service applications. These hoses can handle higher pressures than Nutriflex PVC food and beverage hoses with corrugated covers. They are well suited for transferring raw and pasteurized milk and other dairy items with high water content.

Nutriflo PVC Bulk Food & Beverage Hoses

Continental ContiTech

- Safety factor: 3:1

55AW09

Nutriflo PVC (polyvinyl chloride) bulk food and beverage hoses have a smooth PVC cover and are suitable for transferring dry foods and liquids in gravity-flow and vacuum-service applications. These hoses can handle higher pressures than Nutriflex PVC bulk food and beverage hoses with corrugated covers. They are well suited for transferring raw and pasteurized milk and other dairy items with high water content.

HI-TECH DURAVENT
Flexible Hose & Ducting

Flexflyte Fiberglass Duct Hose

2RY76

Neoprene-coated fiberglass duct hoses are used to blow or exhaust hot air for pellet drying applications in the plastics-processing industry. These lightweight, flexible hoses are flame-retardant and self-extinguishing. They can handle fumes at low pressures and moderately high temperatures, but they are not recommended for applications with continuous flexing, liquids, or abrasives.

Flexible material has PVC-coated wire helix. Ideal for low-pressure air.

HI-TECH DURAVENT
Flexible Hose & Ducting

Industrial Ducting Hose

3AXY7

Reinforced PVC (polyvinyl chloride) duct hoses are used for moving large volumes of air in chemical fume-removal, general fume-removal, and solvent-ventilation applications in the food-manufacturing, chemical-manufacturing, pharmaceutical, industrial woodworking, and plastics-processing industries. These hoses can also be used for low-vacuum applications on dust-cleaning equipment. These hoses resist damage from chemicals and moisture, and they are made from transparent material that lets users see what's in the tube. The hoses are highly compressible, which saves space when transporting them.

ARD COMPRESSIBLE PVC
- Temp. range: -20° to 180°F
- Highly compressible

Sturdy, flexible PVC wall construction reinforced with spring wire helix provides an economical choice for positive airflow.

HTR HEATER/DEFROSTER
- Temp. range: -40° to 225°F
- Crush-resistant
- Compressible for storage

Lightweight hose is constructed from a polypropylene wall, reinforced with polypropylene rod helix. An economical choice for air, dust, and fume applications.

1PV-EP-HM Vinyl Blower Hose with Wear Strip 3WB42

HI-TECH DURAVENT
Flexible Hose & Ducting

Blower Hose

Neoprene-coated polyester duct hoses are used to blow or exhaust air for dehumidification, enclosed space ventilation, portable air conditioner, preconditioned air, and general ventilation applications in foundries, municipalities, shipyards, and the aerospace and facility-service industries. These flexible hoses are flame-retardant and self-extinguishing. They also have an external vinyl-coated wear strip that protects the hose from abrasion when dragged. The hoses are highly compressible, which saves space when transporting them.

1PN-EP-HM NEOPRENE BLOWER HOSE WITH WEAR STRIP
- Operating temp. range: -40°F to 250°F

1-ply, neoprene-coated polyester fabric material with a wire helix reinforcement and an extruded external wear strip. Suitable for heavy-duty positive airflow and for use in cooling, exhaust, and heating/temporary heating applications.

Note: Hose and air mover sold separately.

1PV-EP-HM VINYL BLOWER HOSE WITH WEAR STRIP
- Operating temp. range: -20° to 180°F

Hose is compressible from 15 ft. to 11". Vinyl-on-polyester fabric construction is protected with a vulcanized wear strip. Includes sewn cuff, belt, and buckle on each end. For positive airflow applications.

1PV-EPW-HT HI-TEMP BLOWER HOSE
- Operating temp. range: -65° to 325°F
- Mediumweight
- Flexible and compressible

Ideal for positive airflow applications in heating rooms, confined spaces, tents, and buildings. Durable ducting fabric uses a 100% heat-set fiberglass base substrate laminated to a specially formulated PVC alloy.

DT-45 URETHANE Thermoplastic Polyurethane Duct Hoses for Metal Shavings

- Temp. range: -60° to 180°F
- Abrasion-resistant urethane
- Severe service applications

Hose has hard-drawn spring steel wire helical support. DT-45 hose features medium-weight, 3-ply construction to withstand higher pressure and vacuum

HI-TECH DURAVENT Flexible Hose & Ducting · Continental ContiTech

Duct Hose for Dust

These thermoplastic rubber duct hoses have heavy, thick walls. They provide excellent chemical resistance and good abrasion resistance, and they also resist moisture, ozone, and UV rays. They are used for cotton harvesting, fume removal, leaf blowing, oil-mist collecting, seeding, solvent ventilation, and general ventilation applications. These hoses are suitable for applications with a wide temperature range.

PVC Tubing

- Clear color

PVC Tubing helps to resist abrasion, wear and corrosion, and can provide excellent flow rates in air, water and liquid transport lines. It is suitable for manufacturing, pumping and drainage systems. A tube support is recommended if used with push-to-connect fittings. **PVC with Wire Helix Suction and Transfer Hoses** feature spring spiral wire reinforcement to help prevent collapsing and kinking. They can also be used for static dissipation. The nonmarking, nontoxic, chemical-resistant hoses feature a smooth interior wall that helps prevent product buildup. Use for food and water dispensing, pure water systems, coolant lines, pneumatic systems, vacuum lines, and auto wash equipment. To see standards for a product, go to Grainger.com and search for the item number.

Tygon S3 B-44-3 and Tygon S3 B-44-4X Tubing

B-44-3
2LPR5

- Temp. range: -32° to 165°F
- Hardness: Shore A66
- Clear color
- 50-ft. length

Tubing is taste-free, odor-free, nontoxic, and contains no BPA or phthalates. Compliant to FDA CFR Part 175.300, NSF-51, and 3-A sanitary standards.

Beverage (B-44-3)—Flexible tubing has excellent nonwetting properties for complete drainage and simple flush cleaning.

Food, Milk, and Dairy (B-44-4X)—Smooth, nonporous bore helps minimize bacterial growth. Resists harsh cleaners and commonly used sanitizers.

PVC Food Tubing

- Temp. range: -50° to 150°F
- Hardness: Shore A65

Polyvinyl chloride (PVC) tubing helps to resist abrasion, wear, and corrosion, and can provide excellent flow rates in beverage production and food industry applications, especially with products with high fat content.

PVC Reinforced and Braided Tubing

- Hardness: Shore A73
- Clear color

To see standards for a product, go to Grainger.com and search for the item number.

PVC Reinforced—Braided, flexible tubing is designed for use in potable water transfer lines, air and water lines, and dairy processing. It helps to resist abrasion, wear and corrosion.

- Temp. range: 25° to 150°F

PVC with Spiraled Polyester Yarn Braided —Designed for use in potable water transfer lines, air and water lines, and dairy processing.

- Temp. range: 25° to 150°F

PVC with Wire Helix and Yarn Reinforced—For vacuum and/or higher-pressure applications. Steel wire dissipates static; yarn reinforcement allows higher working pressure.

- Temp. range: 15° to 150°F

PVC with Wire Helix Reinforced—Spiral wire reinforcement prevents kinking and collapsing; maintains full vacuum ratings.

- Temp. range: 25° to 150°F

SAINT-GOBAIN

Tygon S3 E-3603 Lab Tubing

- Temp. range: -51° to 165°F
- Hardness: Shore A56
- Clear color

Features excellent chemical resistance and smooth, polished inner wall construction to ease cleaning. Less permeable than rubber tubing and contains no BPA or phthalates. For use with desiccators, incubators, and as gas and drain lines in general laboratory, beverage, and food applications. EU Food Contact regulation. Meets FDA, Class IV, and NSF 51. Additional sizes available on Grainger.com.

Laboratory and Chemical-Resistant PVC Tubing

- Clear color

FDA Approved; meets CFR 21 175.300.

Laboratory—Highly flexible, high-strength tubing is an excellent alternative to latex and is more cost-effective than silicone. Can be used in peristaltic pumping applications. Withstands autoclaving and repeated gamma sterilization. Ideal for medical devices and laboratory fluid systems, as well as paint, pigment, and soap dispensing.

- Temp. range: -65° to 140°F
- Hardness: Shore A55
- 50-ft. length

Chemical-Resistant—Excellent for peristaltic pumping applications and works well with barbed fittings, even with repeated use. Can be autoclaved or gas sterilized. For transferring, draining, and pumping chemicals, food products, and corrosive materials such as bleach.

- Temp. range: -65° to 160°F
- Hardness: Shore A60
- 100-ft. length

Tygon F-4040-A Fuel and Lubricant Tubing

- Max. temp.: 165°F
- Hardness: Shore A57
- Yellow color
- 50-ft. length

Handles most fuels and industrial lubricants; resists hardening and swelling caused by hydrocarbon-based fluids. Tubing is highly flexible and easy to install.

SAINT-GOBAIN

Versilon 2001 Tubing

- Temp. range: -108° to 135°F
- Hardness: Shore A69
- 50-ft. length
- Clear color

Plasticizer- and oil-free with low compression set properties of thermoset rubber, but won't dry out and crack. Longer service life with fewer tubing changes and reduced downtime. Superior flex life with peristaltic pumps. Ideal for soap and detergent dispensing, water purification, food contact, and chemical transfer applications. Meets FDA standards for food contact.

Standard, Metric and Extruded Polyurethane Tubing

- Hardness: Shore A98, except 4HL91 thru 4HL95

Strong, flexible tubing is 5 to 10 times more wear- and abrasion-resistant than rubber hose, and lighter weight. Use with push-to-connect fittings with no tube support. Nonmarking; resist algae growth. For air and water lines, robotics, carwash, and painting equipment. To see standards for a product, go to Grainger.com and search for the item number.

Braided and Unbraided Polyurethane Tubing

- Clear color

Designed to handle applications that require a tight bend radius. Remains flexible in subzero temperatures. Suitable for fluid transfer in food and beverage, environmental, chemical processing, industrial, peristaltic pump, and similar applications. To see standards for a product, go to Grainger.com and search for the item number.

Braided—Tough braid reinforcements can handle higher working pressures and allow greater flexibility than many other reinforced urethane tubings. Tubing is abrasion- and tear-resistant and is ideal for abrasive and viscous slurry tansfer.

Unbraided—The material is chemical-, oil-, grease-, solvent-, tear-, and abrasion-resistant, with excellent wear properties.

Flame-Retardant Polyethylene Tubing

- Temp. range: -50° to 140°F
- Shore A: 93, Shore D: 45

Flame-retardant tubing is engineered to help resist flames and prevent smoke in the event of a fire. To see standards for a product, go to Grainger.com and search for the item number.

Eldon James

Polyethylene Tubing

High-density polyethylene tubing (HDPE) is chemical-resistant, and engineered to be harder and less flexible than LDPE, with better physical and chemical properties. Withstands sterilization by boiling. Use for air, water, or chemical transfer. To see standards for a product, go to Grainger.com and search for the item number.

Nylon Tubing

High-strength nylon tubing is engineered to help provide long, leak-free service, while requiring little maintenance. It resists chemicals, humidity, and abrasion. Use in industrial applications such as packaging, conveyors, automation machines, and robotics. To see standards for a product, go to Grainger.com and search for the item number.

High-Strength Nylon Tubing

- Temp. range: -60° to 200°F

High tensile strength enhances coupling retention in high-pressure, -temperature, and -vibration environments. Designed for use with machine tool systems, marine control systems, and oil/chemical process lines.

- WOG @ 150F°: 125 psi
- Temp. range: -40 to 120°F

Use with PGA gas pipe, tubing, and all gas, plumbing, and propane applications. No tooling necessary. Have a permanent leak-proof joint; fully-retained gasket prevents cold flow. Meet ASTM D 2513 ASME B31.8-1995, DOT, NFPA, CSA, ICC, and IAPMO.

GAS TUBING

Underground Natural and LP Gas Tubing features polyethylene construction and is ideal for use in buried underground applications for natural gas and major components, such as propane and butane.

PFA Fluoropolymer Tubing

- 50-ft. length
- Natural color
- FDA Compliant resin, USP Class V1 Compliant, ASTM D.3307-10

Nonflammable, heat-resistant tubing helps protect against damage from most chemicals and solvents. The translucent tubing features high flexibility and a nonstick surface. Use PFA tubing for semiconductor, chemical processing, life science, food and beverage, environmental, and general industrial applications.

PTFE Tubing

Low friction coefficient allows higher flows and easier washdown; eliminates process-contaminating residue. Flexible, chemical resistant, nonflammable, and heat resistant. Superior dielectric strength and inert to most chemicals and solvents. For use in industrial, chemical processing, general laboratory, automotive, insulation, and food service applications.

50-ft. Neoprene Tubing

- Temp. range: -75° to 275°F
- Hardness: Shore A61

Tubing is engineered to provide excellent resistance to heat, ozone, abrasion, and inorganic fluid. It also resists damage from UV light, and offers longer service life than neoprene, EPDM, and other general-purpose tubing. Use in food and dairy processing applications, cosmetic production, hot beverage dispensing, water purification lines, sanitization delivery, soap dispensing, and pesticide and fertilizer delivery, as well as ink and toner feed lines and chemical transfer applications. Norprene tubing is heat-sealable, and can be joined without fittings.

Thermoplastic A-60-G Tubing—Black, abrasion resistant, and compatible with cleaners and sanitizers.

Norprene A-60-F Tubing—Burst pressure: 1:5 ratio. Meets FDA food contact, 3-A sanitary standards, NSF-51.

Norprene A-60-Fl. B.—Ozone- and UV light-resistant. Burst pressure: 1:4 ratio. Meets FDA food contact, 3-A sanitary standards, NSF-51.

Submersible Sump Pumps

- Single phase
- Nonclog impeller design

Models operate while completely underwater to cool the pump motors so they can run longer without overheating, compared to upright/pedestal sump pumps that have motors above the sump pit. All 110V models are compatible with most standard U.S. residential electrical wall outlets and have a three prong/grounded power cord plug.

Note: For float switches, see page 2631. For control panels, see page 2630. Check valves are on page 2630 and PVC pipe is on page 2808. For primer and PVC cement, see page 2822, 2823.

Cast-Iron Body—Helps dissipate heat as the pump operates. The painted or powder-coated finish protects the body from corrosion. 220 voltage pumps allow for larger motors that require less current than lower-voltage motors.

Polypropylene Body—Plastic body won't corrode. All models, except 3YU65 have a switch that starts and stops the pump motor.

Valox Body—Features a unibody housing that is corrosion proof and reduces the risk of potential leak paths.

Stainless Steel Body—Feature a stainless-steel body that's more corrosion resistant than cast iron and have a switch that starts and stops the pump motor. Unpainted finish.

Aluminum Body—Lightweight aluminum body provides good corrosion resistance. Pumps have PSC motors with thermal protection.

Cast-Bronze Body—Feature a cast-bronze body that is more corrosion resistant than cast iron and have a switch that starts and stops the pump motor. Unpainted finish.

Pedestal Sump Pumps

- 110V AC nominal voltage
- Single phase
- Continuous-duty motors with TEFC enclosure, except 4KU60 to 4KU64 have PSC motors with ODP enclosure
- Stainless steel shaft, except 4KU64 is plastic

Pumps have a long rod with a float on the end to turn the switch on and off. Three prong/grounded power cord plug.

Note: A check valve is recommended, see page 2630, Additional float balls are available on page 2911. For replacement motors, see page 26.

Cast-Iron Body—Material efficiently disperses heat.

Cast-Bronze Body—Durable and corrosion resistant.

Stainless Steel Body—Offer good strength and corrosion resistance.

Plastic Body—ABS/ plastic is lightweight and won't corrode.

High-Temperature Sump Pumps

- 110 V AC nominal voltage

Use in boiler blow-down pits, plant washdown sump pits, underground transformer vaults, and industrial cleaning sump pits.

Notes: Basin material must be designed for the elevated temperatures anticipated. Continuous duty based on motor NEMA standards. For high-temperature check valves, see page 2655.

Liberty Pumps—HT40 Series feature epoxy powder coat finish and a high temperature float. HT450 Series feature oil-filled thermally protected motor, permanently lubricated bearings and a high temperature float.

Dayton—2-vane impeller and a PSC motor with upper and lower oil-lubricated ball bearings and Type 21 inboard mechanical seal. 15-ft. rope eases installation.

Little Giant—Epoxy-coated cast-iron housing, 416 stainless steel rotor shaft, and upper and lower ball bearings.

Zoeller—5CZG0 is rated for intermittent temp. up to 200°F, regular contact up to 180°F. Viton gaskets. 3-ft. flexible conduit to remove the switch assembly from the high-temp. operating level.

Back-up and Primary Sump Pump Combinations

- 1½" discharge

Systems come with a battery-powered, back-up pump and often include a back-up pump and a primary pump all contained in one unit. For use in a basement sump pit and automatically sound an alarm and activate a back-up sump pump when the primary sump pump malfunctions or when the main electrical power supply fails. For indoor use only; battery sold separately.

Back-up with Primary Pump—Have a battery-powered, back-up pump and a primary pump all contained in one unit. Include a controller and battery case.

Back-up without Primary Pump—Include a back-up sump pump, controller, and battery case.

Battery-Powered Back-up Sump Pumps

- Max. liquid temp.: 104°F, except 2RXT7 is 130°F

Provide additional hours of protection against flooding when the primary pump stops operating due to mechanical failure or an electrical power outage. They automatically start when the primary pump fails and don't require corded electrical power. Pumps are suitable for use in most sump pits and ideal for locations where electric power is unreliable. Battery is not included.

Sump Pump Batteries and Battery Acid

2RXT8

4NE47

5WG11

Batteries supply power to operate a backup pump during power outages or mechanical failures to prevent flooding or water damage.

Maintenance Free AGM—Sealed lead acid batteries don't require fluid levels to be checked and maintained, and are for use in installations where batteries won't be regularly monitored.

Wet Cell—Cost-effective power supply for applications where batteries will be regularly checked and maintained. They require filling with battery acid before installation. The acid will evaporate over time and needs to be replenished to ensure proper operation.

Battery Acid—Sulfuric acid solution must be added to new wet cell batteries prior to installation and is used to replenish acid in existing installations. The acid ships separately from a battery.

Elevator Sump Pumps, Detection System, and Alarms

2WML9

2NRX1

Elevator Sump Pump with Oil Sensor—Pumps drain water from elevator sump pits and transformer vaults. They have an oil detector that identifies when oil is present. The pump operates when water is present and stops when oil is sensed. This prevents the pumping of oil into groundwater or sewage systems.

Oil Detection System and Alarms—Oil detection systems provide pump control and alarm notifications for potentially threatening water and oil levels in pumping applications. The oil switch senses oil and prevents it from being pumped into the environment. Pump not included.

Use to drain treated water from septic tanks and most can drain water containing small solids. Pumps have high heads (the height a pump can lift water before there is no more flow) and high pressure, compared to sewage ejector pumps, to efficiently push treated water out to a drain field.

Note: Float switches and control panels sold separately.

1-Phase—Compatible with most standard U.S. residential electrical wall outlets.

3-Phase—Feature three-phase pumps that are more efficient than one phase, and they use a higher voltage that allows for larger motors that require less current than lower-voltage motors. Require control panel, see page 2630.

High-Head Filtered—Feature permanent split capacitor (PSC) motors with stainless steel shafts and hardware, long-life mechanical seals, and ball bearings. Design helps prevent problems with lockup, abrasives, and running dry. For use in wastewater treatment, liquid transfer, dewatering, and flood control in commercial and industrial systems. 2EHP2 to 2EHP4 have a removable built-in check valve.

Sewage Ejector Pumps

General purpose pumps remove sewage containing solids from drains where a gravity system won't work, such as in septic systems that are below the main sewer line. They have no screen on the bottom of the pump and a large outlet at the top to allow debris to flow through freely. These sewage pump systems mount in a basin where waste collects from a drain pipe and they're turned on and off by an attached switch or control panel. The wastewater is then pumped out of the basin and up to the main sewer or septic line. The **1-phase** pumps are compatible with most standard U.S. residential electrical wall outlets. **3-phase** pumps are more energy efficient than one-phase models. 3-phase models require control panel, see page 2630.

Note: Operating pump outside of specified range may result in pump damage and/or shortened pump life.

Intrinsically-Safe Sewage Ejector Pumps

4HEX6

- Max. liquid temp.: 104°F
- 20-ft. power cord

These pumps remove sewage containing solids from drains where a gravity system won't work, such as in septic systems that are below the main sewer line. These pumps have a nonsparking motor that allows them to operate in hazardous areas where gases and vapors could exist under normal operating conditions. Models have no screen on the bottom of the pump and a large outlet at the top to allow debris to flow through freely. Carbon/ceramic shaft seal. For use in sump pits with a minimum 24" dia. FM Approved.

Sewage Ejector Pump Systems

Libery Pumps 5YU17

Zoeller 2MNE5

Little Giant 44ZH85

Zoeller 6JGW4

- 1-phase
- Max. dia. solids: 2"
- Pump discharge: 2" dia.
- Vent size: 2"

Remove sewage containing solids from drains where a gravity system won't work, such as in septic systems that are below the main sewer line. Pumps have no screen on the bottom of the pump and a large outlet at the top to allow debris to flow through freely. They are mounted in a basin where waste collects from a drain pipe and are turned on and off by an attached switch or control panel. The wastewater is then pumped out of the basin and up to the main sewer or septic line.

Indoor Alarm—Feature an alarm that turns on when the water rises to a preset level in the sump basin. The alarm alerts that the pump has malfunctioned or is not able to keep up with the water flow. Compatible with most standard U.S. residential electrical wall outlets.

Without Alarm—Compatible with most standard U.S. residential electrical wall outlets.

Sewage Grinder Pumps

Zoeller 49DE59

Liberty Pumps 21TN69

Dayton 11A341

Zoeller 4HEW7

Liberty Pumps 1XGC6

Dayton 3BB98

General purpose pumps feature a grinding plate on the bottom that shreds large particles into small fragments so the pump inlet won't clog and the waste can be pumped into a sewage system. These models, also known as grinder pumps, are not for use with septic systems since the small particles will not be filtered out in the septic system's drain field and will contaminate the groundwater. Zoeller pumps are auto-reversing and require control panels. 4HEW7 requires control panel 4DMG5.

4HEW8, 6JGW9 and 19T428 require control panel 4DMG6. For control panels, including duplex control panels, see page 2630.

1-Phase—Compatible with most standard U.S. residential electrical wall outlets.

3-Phase—These motors are more efficient than 1-phase. Motors use a higher voltage that allows for larger motors that require less current than lower-voltage motors. Require control panel, see page 2630.

Sewage Grinder Pump Systems with Alarm

- 1-phase

Tether float switch actuated pumps feature an alarm that turns on when water rises to a preset level in the sump basin to alert that the pump has malfunctioned or is not able to keep up with the water flow. Systems include grinder pumps, basins, pipe, control panels, and switches to turn pumps on and off. Pumps have a grinding plate on the bottom that shreds large particles into small fragments so the pump inlet won't clog and the waste can be pumped into a sewage system. Systems are not for use with septic systems since the small particles will not be filtered out in the septic system's drain field and will contaminate the groundwater. The 110V pumps are compatible with most standard U.S. residential electrical wall outlets.

12U574

Sludge Pumps

- Pump discharge: 4" dia.
- Max. liquid temp.: 140°F
- Include 20-ft. power cord

Use to transfer a mixture of fluid, usually water and pulverized solids. They are attached to a tank to drain the sludge that is noncorrosive and nonexplosive. Pumps are suitable for use in sewage treatment and industrial applications. Three-phase pumps have motors that are more efficient than one phase, and they use a higher voltage that allows for larger motors that require less current than lower-voltage motors. All models require a control panel, sold separately on page 2630.

Sink Drain Pump Systems

- Max. dia. solids: ⅜"

Allow for wastewater draining of sinks, tubs, and washing machines where a gravity system won't work, such as in a basement that is below the main sewer line. Pumps are connected near the area to be drained and allow automatic basin draining when the basin is full. Dayton systems have a vertical float switch while 12F739 and 12F740 have nonclogging stainless steel impellers. Liberty Pumps models feature a separate access cover to ease switch maintenance and a piggyback-style plug. Little Giant pumps have thermal overload protection. 36N560 and 36N561 are preassembled while 4NY91 is compact for tight spaces. Zoeller models can be installed with an internal trap to save space and have no inlet filters or screens to clean.

Sump Pump and Crawl Space Systems

Little GIANT · Liberty Pumps · ZOELLER PUMP COMPANY

- Max. dia. solids: ⅜", except 5CZF9 and 6JGW5 are ½", 4HGH7 is 2"

Quickly remove wastewater where gravity drain lines are not available. 10V133, 10V132 and 5CZF9 are for use in dewatering crawl spaces, basements, and where water pooling occurs, and include discharge hose. 4HGH7 has discharge and electrical connections on the side of the basin allowing the top of basin to be flush with ground level. 5CZF9 and 6JGW5 help eliminate water and dampness, preventing damage, odors, and mold/fungus growth. All systems include a pump, pipe, sump basin, and sump basin cover suitable for a basement sump pump installation.

Pump Control Panels

Models are wall-mounted boxes with relays, switches, and breakers for controlling the start and stop cycling of sump and sewage pumps and attached alarms. These pump control panels use wiring to connect to the pump and allow for automatic or manual pump operation depending on the application.

Pneumatic Utility and Dewatering Pumps

These self-priming and run-dry capable pumps operate at low speeds to handle mud, leaves, twigs, sand, sludge, trash-laden water, and soft solids without clogging or choking. They are powered by an air compressor and don't have an electric motor that produces sparks that may ignite flammable liquids. Pumps transfer moderate amounts of water on jobsites and accept an inlet hose so they don't have to be placed in the water that needs to be drained. They are self-draining to prevent damage in below-freezing weather and have a continuous automatic lubricating internal oiler and an oil-batch-lubricated shaft seal. 5VD16 and 5VD15 have a screened inlet and an adjustable impeller and impeller cover to help maintain peak performance. All models have a cast-iron, 2-vane trash-type impeller. CE Certified.

Sump/Sewage Check Valves

Prevent backflow of sump disposal lines, wastewater lines, sewage lift stations, and ejector systems. They are used in combination with piston, diaphragm and metering pumps and commonly use ball check valves that combine balls and seats in the same valve body for a leak-free shutoff. For additional sizes, go to Grainger.com and search for "sewage check valves."

Klunkless 1XHV8—A large "silencing air chamber" absorbs the clunking sound when the sump pump turns off.

Sump and Sewage Float and Diaphragm Switches

- Normally Closed: pump up for filling applications
- Normally Open: pump down for dewatering applications

Piggyback switches connect directly to the pump. The pump's power cord is plugged into the switch to control electric power to the pump. Wire lead switches require control panels, see page 2630. All switches are mechanically operated, except 3BY79 is a mercury activated switch.

Note: Use only with liquids compatible with switch construction.

Tether Float—Activated by a float that is attached to the pump by a flexible tether that can be adjusted so the pump starts and stops automatically at preset levels. They require more space to operate compared to vertical float switches since the flexible tether moves in an arc as the water level rises and falls in the sump basin.

Vertical Float—Suitable for smaller-diameter sump basins since they use a float that moves a rod straight up and down to activate the switch. The switch starts and stops the pump automatically when the water reaches a preset level.

Diaphragm—Switches are activated by pressure within a diaphragm to start and stop pumps automatically when the water reaches a certain level. They have no moving parts, are compact so they take up little space, and require periodic cleaning since the diaphragm switch may get clogged with debris. Diaphragm switches connected to a tether are often adjustable so the pump will start and stop when the water reaches a desired level.

Switch Accessories—45JZ57 can mount up to 4 float cables. 45JZ58 seals off cables coming into an enclosure. 45JZ59 to 45JZ61 can mount a float cable to PVC pipe. 53CK41 includes external cable weight.

Liberty Pumps · PHCC Pro Series Pumps · Little GIANT · Zoeller Pump Company

Auto Dialer and High-Water Alarms

4NE49

4NY92

2VJ64

Liberty Pumps 4DKK5— Automatically calls up to 4 phone numbers to send a 16-sec. recorded warning. LED display. Unit requires a 9V battery (not included) for battery backup. Indoor mounting only.

PHCC Pro Series 4NE49— Detects water as shallow as 1/32" and sounds alarm for up to 72 hr. on a new 9V alkaline battery (sold separately).

Little Giant 4NY92— Audible and visual alarms operate on 9VDC battery backup if power fails. Includes test switch. For indoor use.

Zoeller 53MD94 and 2VJ64— 53MD94 indoor alarm has battery backup and manual shutoff. 2VJ64 is for indoor/outdoor use.

Liberty Pumps 54TY46— NightEye enabled so you can connect to your wireless network and receive notifications about your system in real time. Model includes a 9V battery and compact snap-on sensor float.

Portable Self-Priming Utility Pumps

Pump repair kits for select models are sold separately.

CENTRIFUGAL PUMPS

5PXY0—For irrigation, general water transfer, and other continuous-duty applications. Model has ball bearings and comes with a mechanical carbon ceramic/stainless steel/Buna N seal. Open-type impeller.

4HEX4 and 33RW83—Use to water lawns, pump out flooded basements, and boost city water pressure. Intermittent duty with mechanical carbon/ceramic seals. 4HEX4 has permanently lubricated shielded ball bearings, external brush holders, rubber feet and suction screen; 33RW83 has ball bearings and replacement brushes.

5YU12—Provides high head and high pressures to move water quickly. On/Off switch and a large hand-tightened prime plug with internal funnel design to ease priming. Intermittent duty with ball bearings, mechanical carbon/ceramic/Buna N seals, and a stainless steel retention plate helps extend seal life by retaining water on the shaft seal. Open-type impeller.

FLEXIBLE IMPELLER PUMPS

Ideal for transferring liquids and emptying bowls, sinks, tanks, bilges, and have a dual inlet and outlet. Intermittent duty.

3YU61—Pump comes with ball bearings, Buna N lip seal, suction screen, 6-ft. garden hose and a lightweight plastic housing.

5UXL8 to 5UXN6—Feature stainless steel shaft and ball bearings, except 5UXN4 to 5UXN6 have sleeve bearings. Each includes 2 impellers and gasket. 5UXL7 and 5UXL9 have thermally protected motors.

SPRINKLER/UTILITY CENTRIFUGAL PUMPS

Continuous duty pumps.

3YU60—Use to transfer water, run multiple lawn sprinklers, or boost city water pressure. Ball bearings and mechanical carbon/ceramic/Buna N seal. Model has overload protection and an On/Off switch.

4CUK6—Suitable for transferring liquids and emptying bowls, sinks, tanks, and bilges. Has ball bearings, stainless steel shaft, and mechanical carbon/ceramic seal.

Laundry Tub Water Pump

- Max. solids: ⅛" dia.
- Max. viscosity: 31 SSU
- 1725 rpm
- Mechanical seals have stainless steel, Buna N, carbon/ceramic parts

Manually operated, straight centrifugal, gravity-feed pump is designed specifically for moving laundry water from tub to overhead sewer. Aluminum impeller.

Electric Utility and Dewatering Pumps

These pumps can transfer water on jobsites. 38H477 and 38H479 are capable of continuous-duty pumping of abrasive materials when used with optional Sand Kits 38H478 and 38H480, available on Grainger.com.

110 to 120V Plug-In—Compatible with most standard U.S. residential electrical wall outlets.

200 to 240V Plug-In—Have a high voltage that allows for larger motors that require less current than lower-voltage motors.

Vehicle Battery-Powered—Powered by a vehicle battery and for use on jobsites where an electrical outlet is not available. Pumps receive battery power as long as they're connected to a vehicle's battery (using the included battery clips) and the vehicle's engine is running.

HONDA PUMPS

Engine-Driven Utility Pumps

Powerful 4-stroke, air-cooled, overhead valve (OHV) engine runs on regular gasoline—no need to mix with oil. Easy to prime and start. Pumps are suitable for a variety of water transfer applications. 6DLY4 to 6DLY6 are designed for jobsites and applications where high-volume trash water capacity is needed.

Suction Strainers and Wheel Kit

Suction Strainers—Prevent large particles of sediment, sewage, mud, or solids from entering suction port of drainage pumps. 1P931 has openings to fit trash and diaphragm pumps.

- 16-ga. steel with "zinc with clear" plating

Wheel Kit—Highly portable wheel kit has double ball bearings on airless tires that can't be punctured. Wide-angle handlebars are made from large-dia. metal tubing. Adjustable sliding axle system.

Note: Pump sold separately.

Portable Engine-Driven Pumps

GENERAL PURPOSE

Self-priming engines run cooler and cleaner for greater fuel efficiency. Provide clean water transfer and handle solids up to ½" dia.

AGRICULTURAL

Self-prime 12 to 15 ft.

Polypropylene—With stainless steel components, replaceable volutes, and O-ring casing seals.

Cast-Iron—With 2 cast-iron nipples, gasket casing seals, steel bases, and T-handles. Mechanical seals have ceramic seats. Clog-resistant impeller.

HIGH-PRESSURE

Dayton—With O-ring casing seals, clog-resistant single-stage impeller, cast-iron volute/diffusers, and 2 cast-iron pipe nipples. Liquid temp. range: 40° to 180°F.

DEWATERING

Compact, heavy-duty models feature a rolled steel frame that helps protect the pump and engine, and eases handling and transport.

CENTRIFUGAL PUMP HEADS

Self-priming pumps have a temp. range from 32° to 150°F.

Pump Heads have ¾" shaft. 21C981 is complete and ready for attachment to gasoline engine; requires straight keyed shaft. 21C982 has a ¾" flexible coupling. 21C983 has a ¾" straight shaft coupling.

Portable Engine-Driven Solids-Handling Pumps

Provide fast, efficient liquid transfer and dewatering. Can be used in remote locations, above or below water level.

Trash—Feature clog-resistant impellers and can easily handle water containing stones, sticks, and other solids, up to 25% by volume (including sewage and wastewater). 3P653 and 3P654 include 2 pipe nipples and a suction strainer.

Semi-Trash—Models feature clog-resistant impellers and are designed for dirtier water applications. Durable impellers are abrasive-resistant for long life and reduced maintenance.

Dewatering—Designed with a silicon carbide mechanical seal for long life. Pump and engine are mounted to a cage frame on rubber vibration cushions to help buffer stress and wear.

Portable Diaphragm Pumps

- Liquid temp. range: 40° to 180°F
- Pump fluids with abrasive solids from ⅜" to 1⅝"
- Self-priming to 25 ft.

Extra-heavy-duty pumps easily handle fluids mixed with sand, silt, mud, sewage, and waste. Integrated tubular handle and wheels offer easy mobility to pump out ponds, trenches, excavations, and septic tanks. Pumps have aluminum casing, thermoplastic rubber diaphragm, and neoprene check valves. Heavy-duty guard covers moving parts. Suction line strainer and 3" NPT suction and discharge pipe nipples included.

Electric Motor—Single-phase TEFC capacitor-start, capacitor-run motor. Equipped with NEMA 56C frame, ball bearings, keyed shaft, and weatherproof On/Off switch mounted on conduit box. For use in clean, dry locations only.

Gas Engine—Meets California emission codes. Features manual start, electronic ignition, and muffler for low-noise operation. For use in well-ventilated areas only.

Hydrostatic Test Pumps

Hand-Operated—Lightweight and suitable for testing water lines and pressure testing boiler, solar, small tank, and sprinkler systems. Include shutoff valve and outlet hose. 6GDU9 has 2.6-gal. integral tank.

Pneumatic—Pumps have an automatic pressure regulator with inlet bypass and an inline strainer with stainless steel mesh filter and clear bowl. High-pressure ball valve and fittings are built-in.

Electric and Gasoline—Ideal for certifying the integrity of newly installed commercial sprinkler systems, pressure vessels, water lines, and sewer lines. Include 10-ft. pressure output hose, except 45EJ59.

Electric models have a built-in pressure regulator. 6GDV7 and 6GDV9 have a full-perimeter cage.

Gas models have an inlet strainer and a 2-wheeled cart with pneumatic wheels. Models also have an automatic bypass and quick-disconnect fittings for inlet and discharge hoses, except 45EJ64. 6GDV1 and 6GDV2 can handle a 10% chlorine solution. Include 10-ft. suction hose.

Fire Hose Testers

- Can test single or multiple lines; independently controlled
- Mounted on swivel casters for easy mobility
- Max. pressure: 500 psi
- For municipal fire hose, fire hose, and nozzles, go to pages 1946, 1947, and 1948.

Safely test fire hose lines to help prevent using damaged lines. Meet NFPA guidelines, except 45EJ63.

1P322

Compact Submersible Centrifugal Pumps

Little GIANT | Dayton

Great for fountains, statues, water gardens, coolant systems, evaporative coolers, wet saws, and air conditioners. All pumps are continuous duty, except 2HNN9, 2HNP1 and 1P521 are intermittent duty.

Mild Corrosive Applications—Engineered thermoplastic motor housing handles water with higher mineral content. Small dimensions allow use in limited space. 2P495, 4RL01, 2P016, and 2P017 have glass-filled nylon housings and are oil filled.

Water and Mild Fluid Applications—Can be operated in open air, in-line, or submerged. 1P521 can pump water or machine oils when submerged, but should only be used in-line, not submerged, when pumping weak acids.

Water Applications—Pumps have epoxy-coated, cast-aluminum motor housing (except 1P321 is aluminum only) for added protection and oil-filled motors for extra cooling and durability.

Submersible Parts Washer Pumps

Little GIANT

Suitable for circulating unheated Stoddard solvent, deodorized kerosenes, and other UL Classified parts-cleaning solutions. Viton seal on stainless steel motor shaft, nylon volute and impeller, and polyethylene integral strainer. ¼" MNPT discharge. 6-ft., 3-conductor SJTO cord outlet. 115V, 60 Hz thermally protected motor. Metal standpipe or conduit (not included) must be attached to builder's fitting to protect cord from solvent attack or damage. Go to Grainger.com for Coil Cleaning Kit 4RL09.

Polyester Housing—Pumps are epoxy encapsulated and housing is corrosion resistant. Suitable for pumping aqueous parts cleaning solutions up to 140°F.

Die-Cast Aluminum Housing—Motor housing is unpainted. Can pump aqueous parts cleaning solutions up to 100°F.

Oase pond boss Little GIANT Dayton BARNES

Pond and Fountain Pumps

Corrosion-resistant materials.

POND AND WATERFALL PUMPS

Suitable for high flow, low head height, low pressure, and solids handling capability with fewer clogs. Pumps provide a high flow rate per watt for energy-efficient continuous operation, and are safe for fish and plants. Ideal for filtration systems, water courses, and waterfalls.

ABS—Continuous-duty water gardening pumps have a PSC motor in an ABS housing.

FOUNTAIN PUMPS

Suitable for high head pressure and high height clean water applications. Small fountain pumps can be used for bubbling stones, decorative, and statuary decorative fountains. Higher head pressure pumps are ideal for demanding fountain applications, larger water features, and spray nozzles. Pond Boss models have an automatic low water shut-off to help prevent pump damage.

Brass—Designed for fountains, coolant systems, evaporative coolers, and other liquid-moving applications. Continuous-duty PSC motor has thermal overload protection. Discharge rotates in 90° increments. Mechanical seal has Buna N, stainless steel and carbon/ceramic parts. Horizontal mount.

Note: Brass models are not safe for fish and plants.

Polypropylene—Oil-free direct-drive pumps produce greater starting torque and flow pressure for continuous operation. Innovative dual discharge for waterfall and stream effects. Noryl impeller and nitrile shaft seal. CSA Certified.

WATER GARDEN PUMPS

13L283 features a non-clogging vortex impeller and an auto reset thermal overload to help prevent pump and motor damage. Pump can pass solids up to 1 3/16" dia.

AUTO FILL VALVE

For permanent and temporary installations to automatically maintain water levels in a skimmer vault or other pond equipment. Includes ½" PVC slip and ¾" garden hose adapters.

Pond Fountain Pump Systems

Pumps operate in a minimum of 5 ft. of water and draw water from below the pond surface; a 6" PVC screen filters mosquitoes, algae, and other vegetation to improve aeration and extend motor life. All parts are plastic and stainless steel for maximum corrosion resistance. Include foam-filled flotation system and 3 nozzles for different fountain patterns. 100-ft. cord. Preassembled for simple installation.

2VAN2 to 2VAN4 feature a lockable, rainproof control center with internally mounted ground fault interrupter, adjustable 24-hr. timers and heat shrink splice kit for the motor cable.

Fountain Lighting System—Stainless steel housings with clear lenses can be easily installed onto the float to create dramatic nighttime displays. Include 3 white LED flood lamps, waterproof splice kit, and mounting hardware. 120V, 120 watt lamps.

Pond Fountain and Aeration Systems

- 1750 rpm for long seal life
- Saltwater compatible

Systems contain the pumps and hardware needed to enhance landscape and aquaculture ponds. Fountains add visual interest to a commercial or residential setting. Aeration helps improve water quality, keeps fish alive, and adds oxygen for overall pond health. All systems feature submerged pumps with a top water intake. 2-yr. manufacturer's warranty on ½ to 1 HP; 3-yr. manufacturer's warranty on 2 HP and larger. Lights and adapter kits are available on Grainger.com. All models are C-ETL and UL Listed, CSA Certified.

Aerating Fountain Systems— Economical fountains are aesthetically pleasing and deliver acceptable oxygen transfer. Provide an attractive V display while aerating the water. Include float with screen, mooring ropes, power cord, and control panel. Minimum water depth for operation is 15" (38cm).

Decorative Fountain Systems— Fountains pass water through deflectors for less clogging, have 5 to 7 built-in interchangeable spray patterns, and include an assortment of nozzles. Come complete with power control center that is compatible with Fountain Lighting Systems (sold separately). Include mooring lines, float, and bottom screen. Minimum water depth for operation is 17.5" (44.5cm).

Surface Aeration Systems—They agitate high volumes of water at the water surface to create maximum air exposure and high oxygen transfer. Provide up to 3 lb./oxygen/HP/hr. into the water for commercial fish farms, retention ponds, and industrial and municipal wastewater applications. Minimum water depth for operation is 15" (38cm).

12V Marine Utility & Livewell Pumps

- Electrically activated

Marine Utility Pumps—Pumps can be submersed to pump water out of a tight space, or the inlet filter cap can be removed and a hose attached to the inlet nozzle for inline use. Used for a variety of applications such as pumping fresh or salt water or delivering water for washdown purposes.

Bait & Live Well Pumps—Pumps circulate water through a hole in the hull of the boat to a holding tank for live bait and caught fish. They include an alternate connection to add a second item such as a washdown pump to keep holes in the boat to a minimum. Include ¾" right angle hose barb adapter and ¾" straight hose barb adapter.

Bilge Pumps

- 12V DC, except 4NX12 is 24V DC

Efficient compact pumps feature a plastic housing and stainless steel shaft. Use in fresh or salt water.

Bilge/Livewell Pump—Hardwired pump features manual priming. 5.25"H

Automatic On-Off Bilge—Continually sense for the presence of water and need no separate float switch. Pump impeller operates for approximately 1 sec. every 2.5 min. If water is present the pump runs until all water is removed.

Nonautomatic Bilge Pumps—Require pump control switches (sold separately).

Bilge Pump Float Switches—Environmentally friendly, mercury-free switches. Turn on at 2" water level; off at ¾". Ignition protected with no battery drain. ABS plastic construction with 26"L abrasion-resistant wire leads. 2GWK5 and 2GWK7 have removable bases. 2GWK7 has an integral switch cover with self-test feature.

Jetted Tub, Spa, and Swimming Pool Pumps

- 115/230V
- Max. liquid temp.: 100°F
- ODP motor enclosure
- NEMA 56 frame motor
- 3450 rpm, except 5PXG1 and 5PXG3 are 3450/1725 rpm

Made from a highly corrosion-resistant blend of glass-reinforced thermoplastic.

Above-Ground Pool Pump—Includes a 4" integral hair and lint strainer.

Self-Draining Jetted Tub Pumps—Include 2 sets of each: union collar, adapter, and 0-ring.

2-Speed Spa Pumps—Allow low-flow circulation for prolonged periods or for high water movement. For use in spas and hot tubs. Include 2 sets of each: union collar, adapter, and 0-ring.

Swimming Pool Cover Pump—Automatic pump removes water from all types of pool covers.

Pool Filters

FILTERS

- Max. water temp.: 100°F

Easy to install and ideal for maintaining a clean and sanitary swimming pool and spa environment. Resist UV light and suitable for indoor or outdoor use.

Cartridge—For residential and commercial pools and spas, from 9000 to 65,000 gal. Easy-to-read pressure gauge.

- Max. pressure: 40 psi

Sand—Easily maintained filters for residential in-ground and above-ground pools, from 16,000 to 48,000 gal. Filter rotates 360° for easy installation. Simple lever action allows selection of valve operation. Top diffuser ensures even water distribution over the sand bed.

- Max. pressure: 28 psi, except 4VMP3 is 36 psi

REPLACEMENT CARTRIDGE FILTER ELEMENTS

Filter out dirt and particles, easy to clean. Even pleats allow better filtering.

Straight Centrifugal Pumps and Pedestal Pumps

- 3450 rpm motors; NEMA 56J frames
- Max. temp.: 200°F
- Max. viscosity: 100 SSU
- 4-position rotation

Pumps have continuous-duty motors for high-flow or high-head applications, with mechanical seals and side and bottom housing drain plugs. Designed for general transfer, boiler feed, condensate return, water circulation, irrigation, cooling towers, filtration, and pressure boosting.

1-phase motors are capacitor-start and have internal thermal protection. 3-phase units do not have overload protection and require a pump control box, sold separately on page 2630.

Pedestal pumps can be driven by pulley or directly coupled to a motor.

HOUSING MATERIALS

Cast Iron—High-flow pumps have cast-iron housing and impellers, with Buna N, carbon, ceramic, and stainless steel mechanical seals. High-head pumps have Viton, carbon, ceramic, and stainless steel mechanical seals.

Bronze—High-flow pumps have bronze housing and impeller, with Buna N, carbon, ceramic, and stainless steel mechanical seal. High-head pumps have bronze housing, stainless steel impeller, and Viton, carbon, ceramic, and stainless steel mechanical seals.

Stainless Steel—Stainless steel housing and impeller, with Viton, carbon, ceramic, and stainless steel mechanical seals.

Cast Iron, Brass Impeller—Cast-iron body with brass impeller. Seals are made from Viton, carbon, ceramic, and stainless steel.

GOULDS WATER TECHNOLOGY

Centrifugal Pumps

- 3500 rpm TEFC motors; NEMA 56J frames
- Max. temp.: 212°

Compact design mounts horizontally or vertically to fit into tight spaces. Corrosion-resistant 316 stainless steel housing with silicon carbide, Viton, and stainless steel seals. Casing and adapter have NPT centerline connections with easily accessible drain, prime, and vent connections with stainless steel plugs. Designed for air scrubbers, chillers, filtration, liquid transfer, pressure boosting, spray systems, and water circulation applications. 3-phase pumps do not have overload protection, which must be provided by a starter unit sold separately, see page 160.

Dayton®

High-Volume, Straight Center-Discharge Pumps

- 3-phase, except 4RU78, 55JJ64 and 55JJ66 are single phase
- TEFC motor enclosures (except 4RU78 is ODP)

Pumps feature continuous-duty motors with enclosed impellers, 4-position port rotation, replaceable case ring, and easy-access housing drain plugs. Suitable for process applications, dewatering, irrigation, chemical transfer, decorative water features, and other industrial applications. 3-phase pumps do not have overload protection, which must be provided by a starter unit sold separately, see page 160. Replacement seals are available on Grainger.com.

Cast-Iron Wetted Materials—Cast-iron housing; bronze impeller. Seals are Buna N, stainless steel, carbon, and ceramic.

Stainless Steel Wetted Materials—Stainless steel housing and impeller. Seals are Viton, stainless steel, carbon, and ceramic.

Naval Bronze Wetted Materials—Naval bronze housing with naval bronze impeller. Seals are stainless steel, Buna N, carbon, and ceramic.

Pedestal Pumps for Direct or Pulley Drives

- Max. casing pressure: 150 psi
- Max. liquid temp: 180°F (except 10X669 and 10X670 are 200°F)

Pumps operate at speeds up to 4000 rpm. Feature durable, permanently lubricated, sealed ball bearings, ¾"-dia. 316 stainless steel shaft, and Type 21 Viton mechanical seals. Motor sold separately. Pumps are suitable for use in chemical processing, liquid transfer, pressure boosting, and circulating heated or chilled water.

Straight Centrifugal Pumps

1N524

- Cast-iron housing, bronze impeller
- 300 series stainless steel shaft and sleeve
- Mechanical shaft seal with stainless steel, Buna N, carbon/ceramic parts
- Max. liquid temp.: 212°F (100°C)

Pumps have continuous-duty motors to handle liquid transfer, water circulation, booster service, irrigation, spray system, jockey pump, and other general-purpose pumping applications. Close-coupled design has back pull-out for easy maintenance. Vent and drain plugs in all positions. Piping is female thread (NPT), except for 3" outlets which are 12516 ANSI flat-faced flanges.

3-phase pumps do not have overload protection, which must be provided by a starter unit sold separately, see page 160.

3- to 20-HP motors: Max. case working pressure is 175 psig; max. suction pressure is 100 psig; discharge can be rotated in 90° increments. Renewable bronze wear ring. Blue baked-on electrocoat paint finish.

⅓- to 2-HP motors: Max. case working pressure is 125 psig, except as noted below; discharge can be rotated in 45° increments, except as noted below. Motors are 3500 rpm with NEMA 56J frame, except ODP 3CCV8 is 3500/2900 rpm, 90° increments; TEFC 49UU60, 2VRU5, 49UU50, and 2VRU1 are 3450 rpm with NEMA 143 frame, 4 position increments; and TEFC 3CCV7 3500/2900 rpm, 90° increments.

Note: 1N497, 53DL78, 3CCU7, and 49UU50 have a high head impeller.

Straight Center-Discharge Pumps

GOULDS WATER TECHNOLOGY

- Max. case pressure: 75 psi
- TEFC motors (except 4XW69 is ODP)

Continuous-duty motors and drain plugs. 3-phase pumps do not have overload protection, which must be provided by a starter unit sold separately, see page 160.

WETTED MATERIALS
316 stainless steel impeller.

Cast-Iron—Seals are Buna N, stainless steel, carbon, and ceramic.

Stainless Steel—Seals are Viton, stainless steel, carbon, and silicon carbide.

Self-Priming Pumps and Pedestal Pumps

Dayton®

Pumps with 1" NPT port self-prime to 7 ft.; pumps with 1½", 2", and 3" NPT ports self-prime to 20 ft. For high-volume industrial and commercial applications including liquid and chemical transfer. 3-phase pumps do not have overload protection, which must be provided by a starter unit sold separately, see page 160. Replacement seals are available on Grainger.com.

Cast-Iron—Mechanical seals are carbon, ceramic, and Buna N. Semiopen impellers. Stainless steel shaft, except 12N810, 12N812, and 12N814 have a steel with stainless steel shaft and built-in check valve.

Stainless Steel—Mechanical seals are carbon, ceramic, and Viton. Semiopen impellers. Stainless steel shaft, except 12N811, 12N813, and 12N815 have a steel with stainless steel shaft and built-in check valve.

Pedestal Pumps—Seals are Buna N, stainless steel, carbon, and ceramic.

- Require 3450 rpm motors
- 1 and 2 HP models have ⅝" shaft, 3 HP model has ¾" shaft

Self-Priming Sewage and Trash Pumps

Dayton

- Temp. range: 40° to 160°F
- TEFC motor enclosure

4YU36

Pumps have continuous-duty motors and internal check valves to handle high volumes of liquids containing sewage and other solids, up to 8% max.; self-prime to 20 ft. They are close-coupled for simple installation and can be truck-mounted. All include a suction strainer. 12N807 to 12N809 feature a cleanout with 2 twist knobs for easy access. Provide support to such applications as process, liquid transfer, irrigation, clear or gray water, and sewage treatment in industrial and commercial facilities. 3-phase pumps do not have overload protection, which must be provided by a starter unit sold separately, see page 160. Replacement seals are available on Grainger.com.

Self-Priming Lawn Sprinkler/Booster Pumps

Dayton | GOULDS WATER TECHNOLOGY

- Cast-iron housings

Pumps hold prime for efficient water transfer. 3-phase pumps do not have overload protection, which must be provided by a starter unit sold separately, see page 160.

DAYTON

- Max. fluid temp.: 180°F
- Max. casing pressure: 150 psi

Feature an easy clean-out design with a front drain plug and removable, replaceable cast-iron volute/diffusers and adapters. 1-phase pumps have built-in thermal overload protection.

GOULDS

- Max. fluid temp.: 140°F
- Max. casing pressure: 125 psi

1-phase capacitor-start models have built-in overload protection with automatic reset. 3-phase units do not have overload protection and require a pump control box, sold separately on page 160.

Self-Priming Thermoplastic Pumps

Dayton

5RWP3

- Max. operating temp.: 140°F
- Max. suction lift: 20 ft.
- Heavy-duty TEFC, 3450 rpm motors

Fiberglass-reinforced pump bodies are specially fitted to resist seawater and saltwater. Durable and corrosion-resistant with stainless steel fasteners, inserts, and shafts. 1-phase pumps have built-in thermal overload protection. 3-phase pumps do not have overload protection, which must be provided by a starter unit sold separately, see page 160.

Self-Priming Prime Line Cast-Iron Pumps

GOULDS WATER TECHNOLOGY

1XLY9

- Max. fluid temp.: 160°F
- Max. solids: ¼" dia.
- Suction lift: 25 ft.

All require a balanced impeller keyed to the motor shaft; replaceable silicon wear ring and shaft sleeve help extend pump life. Pull-out back and tapped connections allow easy maintenance. Required check valve (sold separately) retains liquid for fast, reliable priming and automatic repriming if suction is lost. Use in high-flow applications such as lawn irrigation, dewatering, liquid transfer, and plot irrigation. 3-phase pumps do not have overload protection, which must be provided by a starter unit sold separately, see page 160.

Transfer Pumps

Dayton

- Max. fluid temp.: 180°F
- Suction lift: 25 ft.
- 115/230V
- ODP, 3450 rpm motors
- NEMA 56Y mounting face
- Self-priming

Centrifugal pumps have a semi-open impeller that resists clogging. Mechanical seal with 304 stainless steel, Viton, and carbon/ceramic parts. Drain plug is easily accessible. Motors are capacitor start/capacitor run, continuous duty rated, with ball bearings and stainless steel motor shafts.

Cast-Iron—Cast-iron housing and impeller. Suitable for chemical transfer; not for use with perchloroethylene or trichloroethylene.

Aluminum—Aluminum housing and impeller. Suitable for chemical transfer; not for use with perchloroethylene or trichloroethylene.

Stainless Steel—Stainless steel housing and impeller. Suitable for transferring perchloroethylene and other nonflammable liquids.

MOYNO®

- Cast-iron housing
- Mechanical seal with carbon, ceramic, and nitrile parts
- Max. liquid temp.: 180°F
- Max. viscosity: 20,000cP

Compact pumps have a rugged design for pulsation-free transfer of slurries and fluids. Models feature a rubber stator for quieter operation. You can easily calibrate the pump since flow is consistent and proportionate to the pump speed. Allow suction lifts up to 26 ft. Ideal for transferring abrasive slurries, coatings, feed additives, industrial waste, lubricants, and swimming pool water.

Dayton

Chemical-Resistant Centrifugal Pumps

- Motors are 3450 rpm with NEMA 56J frame
- Max. temp.: 140°F polypropylene, 180°F Noryl
- Max. viscosity: 100 SSU
- 1½" ports

Close-coupled pumps feature continuous-duty motors and resist most acids, alkalis, and inorganic solvents. Pump housing has seal flush ports to decontaminate the seal and seat elastomers. 3-phase pumps do not have overload protection, which must be provided by a starter unit sold separately, see page 160.

WETTED MATERIALS

Polypropylene—Glass-filled polypropylene housing and impeller. Buna N, stainless steel, and carbon/ceramic mechanical seals.

Noryl—Glass-filled Noryl housing and impeller, with Viton, Noryl, and carbon/ceramic mechanical seals.

High-Volume Chemical-Resistant Centrifugal Pumps and Pump Heads

- Max. case working pressure: 150 psi
- Temp. range: 40° to 200°F
- Max. viscosity: 31 SSU
- Discharge ports rotate in 90° increments

Designed for continuous-duty high-flow applications, including chemical processing, liquid transfer, cooling, and circulating. Pumps are straight centrifugal and feature a 304 stainless steel impeller and impeller nut. Other wetted materials include carbon, ceramic, and Viton. 1-phase motors are capacitor-start, with automatic thermal reset protection and ball bearings. Pump heads require a NEMA 56J motor or 56J pump pedestal with appropriate motor. 3-phase pumps do not have overload protection, which must be provided by a starter unit sold separately, see page 160.

Notes: Not recommended for trichloroethylene.

Magnetic Drive Corrosives-Handling Pumps

- Max. specific gravity: 1.1
- Max. viscosity: 100 SSU

Eliminate seal-caused friction loss, wear, contamination, and leakage. All are nonsubmersible, except 2P875 can be used submersed or inline. Mount horizontally.

MD Series—For Mildly Corrosive Chemicals—Pumps handle mild acids and alkalis such as photographic and plating solutions. Glass-filled polypropylene pump housing and impeller. Nitrile O-ring gasket. 3-ft., 3-conductor SJT cord. 2P875 has epoxy-encapsulated motor for submersible use.

MD-SC Series—For Semicorrosive Chemicals—Pumps handle mild acids, mild alkalis, and saltwater. Polypropylene pump housing and impeller, nitrile O-ring gasket. Encapsulated ceramic magnet. Ceramic shaft and thrust bearings. All have 6-ft., 3-conductor SJT cords with 3-prong plugs. Open-fan-cooled motors, except 4RL36 has epoxy-encapsulated motor for submersible use.

MD-HC Series—For Highly Corrosive Chemicals—Pumps handle liquids such as photographic and plating solutions, acids, alkalis, brines, and distilled water. Ryton pump housing and impeller, Viton O-ring gasket, and encapsulated ceramic magnet. Motors have 6-ft., 3-conductor SJT cords with 3-prong plugs, except 4RL34, 4RL35, and 2P044 must be field-wired.

Magnetic Drive, Corrosives-Handling Pumps

- TEFC motors
- Max. temp.: 180°F (polypropylene); 220°F (PVDF)

Sealless mag-drive design eliminates the need for mechanical seals; prevents shaft leaks and reduces maintenance costs.

Polypropylene units feature polypropylene impellers and Viton O-rings. Carbon bushings permit extended run-dry capability.

PVDF units mount horizontally and feature PVDF impellers, Viton O-rings, and PTFE bushings. Not capable of running dry.

FLOODED SUCTION

Close-coupled to standard NEMA motors for installation flexibility. High-efficiency impeller design allows a smaller pump to be used in many applications. Max. viscosity: 100 cps. 5-yr. warranty.

SELF-PRIMING

Can self-prime to 25 ft. of suction lift, based upon 1.0 of specific gravity. Max. viscosity: 50 cps.

+ To convert to psi, divide total feet of head by 2.31.

Dayton®

Chemical-Resistant, Hazardous Location Pumps

- Stainless steel impeller and shaft
- Mechanical shaft seal with Viton and carbon/ceramic parts
- Max. liquid temp.: 250°F

Pumps have a continuous-duty motor to handle liquid transfer, circulation, chemical processing, cooling, and pressure boosting applications. Discharge can be rotated 360° in 90° increments. Pumps do not have overload protection, which must be provided by a starter unit sold separately, see page 160. UL Listed for Class I Groups C and D; Class II Groups E, F, and G.

For more pumps, go to Grainger.com® and search for multistage booster pumps.

Booster Pump Selection Guide

(1) Determine pressure boost required above existing pressure.
(2) Determine gpm to be pumped.
(3) Read across top of specification column "GPM of Water @ Discharge Pressure in psi+" for pressure boost required.
(4) Read down column to gpm required.

Example: You have 20 psi supply. You require 40 psi at 10 gpm. Your boost requirement is 20 psi.
Read across pressure boost column to 20 psi. Read down vertical column to gallons required (10 gpm) or next larger size.
Correct pumps are 45MW68, 45MW69, 45MW85, and 45MW86.

45MW84

22W709

Multistage Booster Pumps

- Max. fluid temp.: 140°F
- Max. case pressure: 300 psi
- 65°C temp. rise motors
- ODP motor enclosure

Use to increase pressure from city mains, or pump water from cisterns and private ponds to ensure the proper operation of filtration equipment. 3-phase pumps do not have overload protection, which must be provided by a starter unit sold separately, see page 160.

DAYTON

The multistage design helps provide steady, quiet, and vibration-free operation. Cast-iron housing is ideal for general service, stainless steel for filtration applications. Feature an O-ring casing seal for reliable, high-pressure sealing with easy disassembly for repair or maintenance. Diffusers are glass-filled engineered composite material with a fixed impeller design and high resistance to abrasion and corrosion. Bowls have 300 stainless steel rabbit lock for positive alignment with no gaskets needed. Mechanical seal with carbon/ceramic and Viton parts; stainless steel spring. Pumps are self-priming to 10 ft. when the pump housing and suction line is filled with water and a foot valve is used. cULus Components Recognized for Motor.

FLINT & WALLING

Pumps feature continuous-duty dual-voltage motors with shielded ball bearings. Replaceable pump cartridge has 304 SS radial bearing and Noryl and Delrin impellers and diffusers. 1-phase units have thermally protected capacitor-start motors. Cast-iron housings feature cast-iron suction and discharge; mechanical seal uses Buna N and carbon/silicon. Stainless steel housings feature 304 SS suction and discharge. All are suitable for pressure boosting, pressure cleaning, mist systems, evaporative cooling, reverse osmosis, and water circulation. CSA Certified to UL standards for U.S. and Canada.

4HFA8

Pressure-Booster Pumps

- Max. case pressure: 75 psi
- TEFC motor enclosure

For boosting water pressure in a home water system. 2-stage impeller design increases pump performance. Stainless steel body and thermoplastic impellers resist corrosion. Suction lift up to 25 ft.

High-Volume Pressure Booster Pumps

Dayton

- Max. fluid temp.: 200ºF
- Max. fluid viscosity: 31 SSU
- 65°C temp. rise motor
- ODP motor enclosure
- Cast-iron housing
- Inlet/outlet NPT: 1½" and 1¼"

Non-self-priming pumps can lift water up to 25 ft. with foot valve and pump suction line/piping filled with water. Continuous-duty motors can boost pressure for high-flow applications. 1-stage models include a discharge port on the pump housing that can be adjusted 90°. The 2- and 3-stage models are equipped for applications that require higher pressures. 3-phase pumps do not have overload protection, which must be provided by a starter unit sold separately, see page 160. cULus Components Recognized for Motor.

Vertical Multistage Booster Pumps

Dayton

- Max. fluid temp.: 248°F
- Max. fluid viscosity: 100 SSU
- Max. case pressure: 362 psi
- 3450 rpm with NEMA 56C frame
- TEFC motor enclosure
- Inlet/Outlet Flanged: 1¼" and 1¼"

The inline design allows pump to also be installed horizontally in locations where suction and discharge connections are in the same plane and have the same pipe sizes. Closed stainless steel impeller with silicon carbide, stainless steel, and EPDM seals. Pumps feature high-pressure performance at low flow, making them suitable for use in pressure-boosting systems, boiler feed applications, ultra filtration and reverse osmosis systems. Compact size allows installation in tight spaces. Continuous-duty motor. Flange Kits are sold separately on Grainger.com and include a gasket, companion flange, 4 nuts, and 4 bolts. 21R871 is for stainless steel models, 21R870 is for cast-iron models. 3-phase pumps do not have overload protection, which must be provided by a starter unit sold separately, see page 160. cULus Components Recognized for Motor.

Horizontal Multistage Booster Pumps

Dayton

- Max. fluid temp.: 194°F
- Max. fluid viscosity: 100 SSU
- Max. case pressure: 150 psi
- 3450 rpm with NEMA 56J frame
- ODP motor enclosure, except 5UXF9 and 5UXG4 are TEFC
- Cast-iron housing

Feature continuous-duty motors for high-flow applications. Closed stainless steel impeller with carbon/ceramic, Buna N, and stainless steel seals. Pumps are not self-priming. Wet moving parts made of 304 stainless steel for longer life. Can be used with thin, clean, nonaggressive and nonexplosive liquids without solid particles or fibers. Suitable for increasing water pressure from city mains or private water systems, rinsing or spraying cooling equipment, and lawn sprinkling. 3-phase pumps do not have overload protection, which must be provided by a starter unit sold separately, see page 160. cULus Components Recognized for Motor.

48GP22

Constant Pressure/Variable Speed Booster Pumps

GOULDS WATER TECHNOLOGY

Pumps include everything needed to maintain constant pressure in domestic water applications. Great in multibath homes, small apartments, condos, penthouses, residential irrigation systems, and restaurants. For indoor use.

3500-rpm motor in TEFC enclosure is rated for continuous duty; 50/60 Hz. Max. liquid temp.: 250°F. Stainless steel housing; seals are carbon/ceramic/rubber.

Pumps include tank and controller. Check valves, unions, ball valves, and breakers not included. Note: Pumps need to operate at minimum gpm flow to maintain operation.

Turbine Pumps

Dayton

- Liquid temp. range: -20° to 230°F
- 3450 rpm motors
- Bronze impellers
- Max. specific gravity: 1.0
- Mount on NEMA 56J frames, except 56C on 300 psi max. pressure models
- 300 psi max. pressure models handle vapors up to 20% by volume, to minimize vapor lock

Feature Type 21 mechanical seals and an easily accessible drain plug. Ball bearings on shaft for longer life. Suitable for industrial and commercial applications, boiler feed, condensation return, pressure service, water treatment, reverse osmosis filtration, spray equipment, and liquid transfer. 3-phase pumps do not have overload protection, which must be provided by a starter unit sold separately, see page 160.

Notes: A suitable relief valve, such as 2X318 (on page 2895), should be installed to assure maximum psi is not exceeded; otherwise, electric motor/pump may be damaged.

Use only with nonflammable liquids compatible with pump materials in nonexplosive/nonflammable atmospheres.

Bronze Housing—Wetted materials are bronze, carbon, ceramic, Buna N, and stainless steel.

Cast-Iron Housing—Impellers have balancing holes to help eliminate side wear and reduce the need for external adjustments. Include cast-iron motor bracket with replacement bronze sleeve. Wetted materials are cast iron, bronze, carbon, ceramic, and Buna N.

Note: Not for use with viscous or abrasive liquids.

Jet Pump Systems

24PR57

4HEZ9

- 115/230V AC
- Inlet: 1 ¼" NPT

Pump systems are centrifugal end suction pumps that use a jet pump ejector to generate a vacuum which helps draw water up the well. They come with a booster tank to ensure the pump will maintain a more consistent water pressure and supply water to homes or facilities without having to connect to a municipal water source. Jet pumps are installed above ground for repair and maintenance, and they eliminate damaging pump twisting common with submersible well pumps that causes them to strike against and damage the sides of the well casing.

Jet Pump Ejectors

5UXL4

Ejectors consist of a nozzle and a venturi attached to a compatible jet pump to create a vacuum that draws water up the well. **Shallow-well** jet pump ejectors connect to compatible shallow-well jet pumps for wells less than 25-ft. deep. The **deep-well** models connect to compatible deep-well or convertible well jet pumps for wells more than 25-ft. deep. All ejectors are commonly used in residential well applications.

No. of Pipes	For Use With	Includes	Item No.

Shallow-Well Jet Pumps

4HEY4

1D881

- 115/230V AC
- Inlet: 1 ¼" NPT

Supply water from wells up to 25-ft. deep and eliminate the need to connect to a municipal water source. They are mounted above ground for maintenance and repair compared to submersible well pumps that are installed in the well and need to be removed from the well for inspection. Pumps are not subject to pump twisting found in submersible pumps that causes them to strike against and damage the sides of the well casing. Ejector included.

Convertible Well Jet Pumps

1D873

4HEZ7

- 115/230V AC
- Inlet: 1 ¼" NPT

Eliminate the need to connect to a municipal water source and are for use in shallow wells (up to 25-ft. deep) or deep wells (greater than 25-ft. deep) depending on the ejectors used. Pumps are mounted above ground for repair and maintenance compared to submersible well pumps that are installed in the well and need to be removed from the well for inspection. Jet pumps are not subject to pump twisting found in submersible pumps that causes them to strike against and damage the sides of the well casing. Required ejectors not included, see Jet Pump Ejectors this page.

Cast Iron—Adaptable to single-pipe shallow well or double-pipe deep well installations.

Thermoplastic—All wettable parts resist corrosives and abrasives found in most wells.

Submersible Deep-Well Pumps

Dayton®

- Max. operating temp: 86°F

Provide a constant supply of water even during dry seasons and don't require priming since they are submerged in water. They are buried within a well deep in the ground and push water up through a pipe that is connected to one end of the pump. Models are connected to a tank to keep water pressure more consistent.

2-Wire—Require no control box since the motor controls wire directly to the water system pressure switch or power supply. Not for use where abrasives or heavy-water scale are present.

3-Wire—Require an above-ground control box (sold on this page) that connects between the pressure switch and pump motor. Motors have a high starting torque that can help loosen mineral deposits which may adhere to the pump's moving parts.

Franklin Electric

Submersible Motor and Pump Control Boxes

These 1-phase Type 3R enclosures have prepunched holes for pole or wall mounting, indoors or outdoors. CSIR Control Boxes have a start capacitor, but no run capacitor. CSCR Control Boxes have both a start capacitor and a run capacitor. Easy wiring, box-type terminal lugs that accept up to #10 AWG wire on ⅓- to 1-HP boxes and up to #2 AWG wire on 1½- to 10-HP boxes. All boxes are recommended for water systems that utilize a pressure switch and safety relief valve.

CSIR (Capacitor-Start, Induction-Run)—Boxes are quick-disconnect relay-type.

CSCR (Capacitor-Start, Capacitor-Run)—Models provide greater electrical efficiency and longer pump life. Deluxe CSCR boxes contain a magnetic contactor.

Submersible Deep-Well Pump Heads

- Max. operating temp.: 130°F

Stainless steel pump heads consist of a pump body and impeller (without motor) that allows replacement of a defective pump head without having to replace the existing pump motor. They must be connected to a compatible motor for proper operation in a deep well. The long, cylinder-shaped pumps provide a constant supply of water even during dry seasons and don't require priming since they are submerged in water. Pumps are buried within a well deep in the ground and push water up through a pipe to the surface and are connected to a tank to keep water pressure more consistent. They are more effective for deep wells and go down several hundred feet compared to jet pumps that have a depth of up to 120 ft. Pump heads do not include a submersible motor. Order motor separately, by horsepower, on this page.

Submersible Deep-Well Pump Motors

- 4" body dia.
- Max. ambient temp.: 86°F

Deep-well pump motors can help draw water up from groundwater sources as deep as 400 ft. below the surface. They have a stainless steel shell with encapsulated, hermetically sealed stator and a splined stainless steel shaft. Lubricant-replenishing, filtered check valve and pressure-equalizing diaphragm. Replaceable lead wire assemblies include ground wire. Motors have hydrodynamic thrust bearings and CCWSE rotation. Continuous duty in 86°F water at ¼ ft. per sec. ½-HP to 2-HP models include 48" lead length; 3-HP to 7½-HP models include 100" lead length.

1-Phase—For water systems that utilize a pressure switch. Built-in lightning protection. Capacitor-start motors require a control box, sold separately on page 2654. Automatic thermal protection on motors up to 1 HP; manual (in control box) 2 HP and higher.

3-Phase—Require motor starter and overload relay, sold separately on page 170.

Submersible Deep-Well Pumps and Control Panel Kits

- 3-wire
- Max. operating temp.: 86°F, except 7YT16 to 7YT30 are 130°F

Control panel kits regulate the start/stop operation of submersible deep-well pumps that are buried within a well deep in the ground and push water up through a pipe that is joined to one end of the pump. The long, cylinder-shaped pumps can provide a constant supply of water even during dry seasons. They don't require priming since they are submerged in water and are connected to a tank to keep water pressure more consistent. Pumps are more effective for deep wells and can go down several hundred feet compared to jet pumps that have a depth of up to 120 ft.

3-Phase—Require motor starter and overload relay, sold separately on page 170.

Spring Check and Foot Valves

Prevent backflow or loss of prime.

Ductile-Iron—For use with high-flow submersible well pumps and have no leaded components.

Lead-Free and Low-Lead—Stainless steel spring and screen; nitrile seal. Lead-Free Brass Check Valves have a nonspin acetal poppet. Lead-Free Bronze Foot Valves have an Enviro-Check body. Low-Lead Brass Check and Foot Valves have bronze seat.

PVC—Stainless steel spring and raised-radius valve seat for positive seal.

Acetal Resin Copolymer—Convert to check valves by removing the strainer; convert to check/foot valves by removing the spring. Lead-free components.

Dayton®

Well Water Tanks

Act as a reservoir to store water and keep the pressure consistent to reduce the start/stop cycling of the pump. Tanks keep the water pressure constant with an air bladder system that is precharged (a set amount of air is pumped into the bladder) when the tank is assembled at the factory or charged with an air compressor just before installation. Models without an air bladder require an air volume control to maintain air pressure for a consistent water flow. All tanks when used with pumps require a relief valve sold on page 2894.

Fiberglass Body—Rust-, dent-, and scratch-resistant high-density polyethylene composite is half the weight of steel. Base rotates 360°. Chlorine-resistant butyl air cell allows easy maintenance and will not affect water purity.

Steel Body—All-welded steel tanks have a butyl diaphragm system and are for use indoors or out. Models are for both residential and commercial water and booster systems. Tanks are coated epoxy inside, blue polyester outside.

Water Pressure Reducing Valves

- Max. pressure: 125 psi
- Max. temp.: 225°F

Use to control and protect plumbing systems by reducing the downstream pressure. They decrease the psi of water entering buildings from municipal water mains to avoid ruptured pipes and damaged fixtures in commercial, industrial, or institutional facilities.

Pipe Size	L	Material	Mfr. Model	Item No.

Hydronic Circulating Pumps

- Cast-iron housing
- Flange connection

These pumps move water through a closed system of pipes in heating applications or water recirculation systems. The pump is mounted in-line near the boiler and recirculates the water through a closed-loop piping system where water does not exit the pipes. Pumps are painted red or green to identify them as hydronic pumps and are primarily used for radiant heating in residential, commercial, and industrial buildings. HVAC circulating pumps maintain a watertight seal with pipe flanges connected to hydronic system plumbing. Cast-iron housings are for use with deoxygenated or chemically treated water. 3-phase pumps do not have overload protection, which must be provided by a starter unit sold separately, see page 160.

Standard pumps have fewer replaceable wear parts than 3-piece circulating pumps.

3-piece pumps have a detachable pump, motor, and bearing assembly to aid maintenance and replacement needs. They are capable of handling higher head and flow rates than standard pumps.

Multi-speed pumps have three speeds that can be manually adjusted to meet different performance levels. Pump performance needs can change based on the configuration of a plumbing system or to meet periods of low and high demand. They work well as a replacement pump because they can match the performance of most standard circulating pumps. The maximum flow at feet of head is listed at the pump's maximum speed setting.

Energy efficient pumps use less energy than other circulating pumps. They have an electronically commutated motor (ECM) that automatically adjusts the flow rate through variable speed control to meet hot water demand. The maximum flow at feet of head is listed at the pump's maximum speed setting.

Potable Circulating Pumps

Standard Armstrong 32UN17

3-Piece Bell & Gossett 5JPD9

Multi-Speed Arrmstrong 32UN06

Energy Efficient Armstrong 788V82

Under-Sink Goulds 10D425

Face to Face Dimension

Potable circulating pumps move hot water through pipe systems to faucets and shower heads. These pumps are certified for potable water and are constructed of bronze, stainless steel or brass to prevent corrosion. Their gold color helps identify them as potable water pumps. They reduce water waste by recirculating hot water that has cooled back into the cold water supply line. Pumps are used in residential, commercial, and industrial applications to help plumbing systems deliver instant hot water. They mount to the pipe in-line near the water heater or boiler, except under-sink units mount at the farthest faucet from the water heater. 3-phase pumps do not have overload protection, which must be provided by a starter unit sold separately, see page 160.

Standard pumps have fewer replaceable wear parts than 3-piece circulating pumps.

3-piece pumps have a detachable pump, motor, and bearing assembly to aid maintenance and replacement needs. They are capable of handling higher head and flow rates than standard pumps. In most cases, these pumps can be left in place while serviced which reduces system downtime.

Multi-speed pumps have three speeds that can be manually changed to meet different performance levels. Pump performance needs can change based on the configuration of a plumbing system or to meet periods of low and high demand. They work well as a replacement pump because they can match the performance of most standard circulating pumps.

Energy efficient pumps use less energy than other circulating pumps. They have an electronically commutated motor (ECM) that automatically adjusts the flow rate through variable speed control to meet hot water demand.

Under-sink pumps pull hot water from the heating source through the pipes to provide instant hot water for all faucets between the water heater and the pump. They can be used where a dedicated water return line is not available.

Unions for Circulating Pumps

- Bronze material

Unions allow for more connection type and pipe size options when mounting a circulating pump with union connections between two sections of pipe. They can act as an adapter between the pump's intake and discharge connections. Unions must match the material of the pump and the system in which it is used, hydronic or potable.

Flanges for Circulating Pumps

- 2 mounting holes
- FNPT flange to pipe connection

Flanges allow for more connection type and pipe size options when mounting a flanged circulating pump inline between two sections of pipe. The flange can act as an adapter between the pumps intake and discharge connections. They should be matched with the compatible series and manufacturer model number of the pump. 4JA91 includes a ball valve which can shut down the water supply to the pump to facilitate maintenance and replacement.

Flange Gaskets & Hardware Kits for Circulating Pumps

Bell & Gossett a xylem brand · Taco Comfort Solutions · ARMSTRONG

Kits help mount the flange to the pump. Gaskets seal the connection, while bolts and screws secure the flange to the pump. These accessories are intended for use with a flange of the same brand and series.

Motors for Circulating Pumps

Bell & Gossett a xylem brand

Motors run on alternating current (AC) to power the pump to move hot water in hydronic heating systems and water recirculation equipment. These motors are intended to replace a motor in a 3-piece circulating pump of the same brand, series, and manufacturer model number. They are commonly used to replace damaged water circulator motors.

Repair Parts for Circulating Pumps

Bell & Gossett a xylem brand · Taco Comfort Solutions

These replacement parts should match the brand, series, and manufacturer model number of the pump.

Bearing assemblies sit between the motor and pump casing and transfer the power generated by the motor to the pump's impeller.

Seal and gaskets keep the circulating pump's motor and bearing assembly dry by preventing water from exiting the pump body.

Impellers move fluids through the system using centrifugal force.

Motor couplers connect motors to pumps and transfer the power generated by a motor to the pump's impeller. They provide alignment tolerance of the shaft while the pump is operating.

Motor cartridges are removable from the motor housing and contain the moving parts of the motor, such as the shaft, bearings, and the impeller. The cartridge can be removed and replaced without replacing the pump.

Motor mounts hold and support the circulating pump's motor inside the motor's housing. They work with motor couplers to maintain alignment between the motor and the pump.

Lubricants are used on the bearing assemblies of 3-piece circulating pumps.

Intake & Discharge Definitions for Condensate Removable Pumps

INTAKE CONNECTION STYLE

The connection style of the intake port where the condensate enters the pump.

Open—Has an open port into the tank where tubing can be inserted, but no additional seal or gripping mechanism holds the tubing.

Barbed—Is a port with raised ridges, or barbs, that grips the tubing and holds it in place.

Screened Submersible—For in-pan pumps that are submersed in a pan that collects condensate through a screened area in the bottom of the pump. The screen prevents debris from entering the pump.

DISCHARGE CONNECTION STYLE

The connection style of the discharge port where the fluid exits the pump.

Barbed—A port with raised ridges, or barbs, that grips the tubing and holds it in place.

MNPT—US standard for Male National Pipe Taper threads that identifies the connection as a tapered external thread that forms a seal when tightened.

FNPT—US standard for Female National Pipe Taper threads that identifies the connection as a tapered internal thread that forms a seal when tightened.

Condensate Removal Pumps

Pumps evacuate liquid formed by condensation from the heating or cooling system when gravity drainage is not possible. Furnaces, air conditioners, and boilers are often installed in a location lower than the drainage system, such as a basement. The pump performance is based on the amount of liquid, in gallons per minute (gpm), that the pump can lift in vertical feet from the liquid sitting in the tank (feet of head).

Standard pumps have a built-in tank to collect the condensate. The pump's tank capacity varies in the amount of condensate (gallons) the tank can hold.

Plenum-rated pumps meet building codes that require all cables installed in an air-filled space, or plenum, to have fire and smoke inhibiting qualities. Plenum-rated cable has an outer jacket that prevents the spread of flame and limits the release of harmful smoke. They are required in buildings such as hospitals, offices, and schools that use the ceiling cavity to supply, return, and exhaust air from the occupied area.

In-pan pumps are designed to sit in a drainage pan and pump out collected condensate. They do not have a built-in tank. These pumps are partially submersible and have a mechanical float switch that starts and stops the pump depending on the condensate level in the pan.

Mini-split pumps are designed to collect condensate generated by wall-mounted air conditioners. These compact pumps have a small reservoir and tubing that fit inside the air conditioner housing. A mechanical float switch triggers the pump to activate and empty the reservoir outside of the building.

Check valves automatically close so that the flow of condensate can only go one way, preventing backflow into the pump's tank. They mount to the discharge outlet of a condensate removal pump and connect to a drainage tube.

In-line & In-pan switches protect condensate systems from overflow by shutting down the equipment when a blockage is detected. They are installed in-line at the drain pan outlet. These switches can be used in combination with a condensate removal pump, or independently. 3XY17 has 6-ft. leads and 18 AWG wire. 4NY29 has 6-ft. leads and 24 AWG wire.

Condensate Return Systems

Hoffman

- Max. liquid temp.: 200°F
- Motor enclosure: Open drip-proof (ODP)

Condensate return systems collect condensation generated in a large boiler loop system and pump the condensation back to the boiler. They are used when gravity-fed return is not an option. These systems have a built-in collection tank fitted with a mechanical float switch. The switch triggers when condensation levels rise, which activates the pump to pump the condensate back to the boiler. **Duplex** systems have two pumps. Pumping alternates between the two pumps to reduce wear on both of them. They are used for systems with higher condensate return demand.

Simplex systems have one circulating pump.

Boiler Feed Systems

Hoffman

- Single phase

Pumps store and monitor the amount of condensate returning to the boiler to ensure it does not exceed the boiler's capacity. They mount directly to the boiler in either a vertical or horizontal orientation to accommodate various spacing requirements. Welded steel tank, single phase.

Simplex systems have one circulating pump.
Duplex systems have two pumps. Pumping alternates between the two pumps to reduce wear on both of them. They are used for systems with higher condensate return demand.

Replacement Pump for Condensate Return & Boiler Feed System

Hoffman

These pumps replace a worn or damaged pump in either one-pump (simplex) or two-pump (duplex) condensate return systems or boiler feed units. Pumps transfer condensate in a collection tank back to the boiler and are typically mounted vertically at the base of the tank. Replacement pumps should match the brand, series, and manufacturer model number of the condensate return system or the boiler feed unit.

Hoffman

Seal Kits for Condensate Return & Boiler Feed Systems

Replacement gaskets and seals should match the brand, series, and manufacturer model number of the condensate return system or the boiler feed unit.

Float switch is a mechanical device installed inside a condensate or boiler feed collection tank. It floats upon the rising condensate as the container fills. Once the float reaches a preset level, it triggers the switch to start the pump and evacuate the tank.

Gaskets and **Seal Kits** keep the pump motor and assembly dry by preventing water from exiting the pump body. These items wear over time and need to be replaced.

Diaphragm Pumps—Housing Materials

Aluminum—Lightweight and can transfer paints, petroleum products, and oils.

Cast-Iron—For heavy-duty industrial applications and abrasive products.

Groundable Acetal—For use in solvent transfer. Metallic fibers in the resin renders the material conductive to eliminate static charge buildup.

Kynar—High-performance fluoropolymer resin has good chemical resistance at higher temperatures.

Polypropylene—Resists many caustics and a wide variety of nonaggressive water-based liquids.

PVDF (Polyvinylidene Fluoride)—Low thermal conductivity and highly resistant to acids, bases, and solvents.

Stainless Steel—High corrosion and chemical resistance and ideal for use with acids, caustics, and solvents.

Dayton Nonmetallic Air-Operated Double Diaphragm Pumps

- Self-priming to 15 ft. wet, 10 ft. dry
- Run-dry capability

Portable, intrinsically safe models resist overheating and are suitable for acids, caustics, and solvents, to high-viscosity shear sensitive liquids including paints, inks, and adhesives.

ARO Nonmetallic Air-Operated Double Diaphragm Pumps

- Self-priming to 15 ft. wet, 10 ft. dry
- Run-dry capability

Easy-to-transport pumps are air operated to reduce exhaust and spark hazards. Suitable for pumping thick, solids-laden liquids and slurries in applications such as mining and dewatering.

Sandpiper Nonmetallic Air-Operated Double Diaphragm Pumps

- Self-priming to 15 ft. wet, 20 ft. dry
- Run-dry capability

Ideal for pumping solvents, slurries, and high-viscosity liquids such as paints and inks. Feature all-bolted construction and abrasion- and corrosion-resistant materials.

Free-standing support base is useful in portable applications.

Dayton Metallic Air-Operated Double Diaphragm Pumps

Self-priming pumps can run dry and are capable of pumping slurries, solvents, and high-viscosity liquids, such as paints and waste oils. Spring-assisted air valve has proprietary seal rings and never requires lubrication. 22A592 and 22A593 are CSA Certified for operation using natural gas.

ARO Metallic Air-Operated Double Diaphragm Pumps

Self-priming pumps are capable of running dry and can easily handle slurries, solvents, and other high-viscosity liquids. Constructed of highly fatigue- and abrasion-resistant materials. Air-pressure air valve design helps prevent stalling.

Flap Valve—Durable, multipurpose pump features thick-hinged flap check valves and thick-wall construction for higher solids handling.

Fuel—Identical inlet/outlet manifolds allow variable, interchangeable, and reversible installation. Suitable for use with gasoline, aviation fuel, diesel fuel, fuel oil, kerosene, and water. Meet UL Specification 79.

Aluminum, Split Manifold—Designed with dual inlets to pump and blend antifreeze and water to a 50/50 mixture.

SANDPIPER
A WARREN RUPP PUMP BRAND

Sandpiper Heavy-Duty Air-Operated Double Diaphragm Pumps

Heavy-Duty Ball Valve—Have thick-walled construction that contains up to 30% more material than similar pumps. Ideal for highly viscous and small solids-laden fluids. Bottom discharge porting helps eliminate issues caused by settling solids. Freestanding base helps ease pump rebuild.

Heavy-Duty Flap Valve—Feature hinged-flap check valves to handle abrasive slurries, suspended and unsuspended solids, and line-size solids in horizontal and vertical manifold connections. Have bottom discharge ports. Dry prime up to 24 ft. of water.

ARO®

ARO Air-Operated Double Diaphragm Pumps—EXP Series

Provide stall-free, ice-free operation. Pumps feature Quick Dump exhaust valves that divert cold exhaust air from ice-prone components to help prevent freezing. Unbalanced air valve design helps avoid stalling issues associated with other pumps. Suitable for wastewater treatment, recirculating plating solutions, bulk transfer, and chemical formulation applications. Flanges are standard ANSI 150# flanges. 5-yr. manufacturer's warranty.

Dayton Food-Grade Air-Operated Double Diaphragm Pumps

Dayton®

22A603

Can handle a variety of fluids and are designed for food ingredients, cosmetic, and pharmaceutical processes where 3A Sanitary certification is not required. Feature 316 stainless steel construction with passivated satin finish, and have FDA-compliant elastomers with sanitary clamp fittings. Built for applications requiring FDA approval.

VERSA-MATIC®

Versa-Matic Food-Grade Air-Operated Double-Diaphragm Pumps

3A Sanitary—Feature a leak detection system, clean-in-place (CIP) design, and removable ball cages to ease cleaning. 32 ra surface finish. Models include a rotating pump stand for drainage.

FDA—Constructed of FDA-compliant materials and feature the innovative Elima-Matic air valve system that virtually eliminates stalling, icing, and the need for lubrication. Pumps have an internal and external electro-polished finish, tri-clamp connections to ease disassembly, and nickel-plated or non-metallic chemical-resistant air sections for washdown.

PENTAIR

SHURFLO® Little GIANT FLOJET

Sprayer Pumps

- Thermally protected motors (except 4UN19)
- Sealless design

Pumps can run dry without damage (except 11W067). Pressure demand switches automatically turn pumps off when the outlet is closed. Sealless design eliminates troublesome shaft seals and potential leakage into the motor.

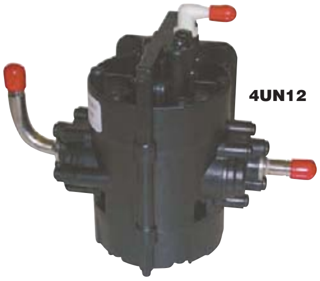
Note: Not for use in potable water systems. Not for use with gasoline.

AIR-DRIVEN INJECTION

- Max. air inlet pressure: 60 psi
- Suction lift (wet): 25" Hg

2-chamber double-diaphragm pumps can be used for chemical transfer, soap dispensing, or to inject liquid fertilizer. Pumps operate with CO_2, nitrogen, or clean, filtered, compressed air. Performance varies with liquid viscosity.

Note: Always check for chemical compatibility of elastomers prior to installation.



4UN12

4UN55 AND 4UN56

Built-in outlet check valve prevents supply tank from draining through pump when pump is mounted up to 4 ft. below tank liquid level. UL Listed and CSA Certified.

4UN18 TO 4UN20

Pumps come with 1 straight barb swivel fitting and one 90° elbow barb swivel fitting. Use with SHURflo brand fittings only. UL Listed and CSA Certified.

11W067

4UN20

2P795

2P796

Housing features port locations that can be rotated in 90° increments to simplify installation.

Dayton®

AC Fuel Transfer Pump

- 115VAC
- Self-priming
- Aluminum housing, resists corrosion

Rainproof and weatherproof for tough outdoor use, pump features an overload protected and intrinsically-safe motor with circuit breaker protection. Pump switches off when the nozzle is placed into the nozzle holder. The geared pump design uses sintered metal gears that provide greater suction, minimal noise, and higher tolerance to contaminants. Fuse with outside access. Includes a lockable nozzle cover and swivel at nozzle.

AC Fuel Transfer Pumps

FILL-RITE

These rotary vane, self-priming pumps let you dispense B20, diesel, E15, gasoline, and kerosene. For use on construction sites and farms. With internal bypass valves, Viton O-rings, heavy-duty switch, and permanently lubricated ball bearings. The permanent magnet motors can operate continuously for up to 30 min., are ntrinsically-safe, and have thermal overload protection. Models with nozzle are lockable. Pumps can be mounted to a standard 2" NPT opening with included bung adapter.

Note: Find Fill-Rite Pump Repair Kits at Grainger.com.

36NL24

Portable DC Fuel Transfer Pumps

FILL-RITE

Low-profile and self-priming with configurable flanges that allow you to position the inlet and outlet to fit your needs. Intrinsically-safe motor with thermal overload protection, cast-iron housing, and Buna-N seal. 36NL24 comes with a suction hose, discharge hose, and nozzle. 36NL26 comes with hose, nozzle, and bung adapter. All models include a quick connect battery cable.

Fuel Flowmeters

FILL-RITE

Inlet and outlet ports can be rotated in 90° increments to ease installation. All models are UL and C-UL Listed, except 24KJ09 and 3XNL1. 1P951 and 5P232 have nickel-plated aluminum housing and Type 303 stainless steel shaft. 3XNL1, 24KJ09, 3MMP5, 3KMR1, 4RP91, and 4RP92 have corrosion-resistant aluminum housings. All models are not for resale measuring use.

2 TO 20 GPM

Can be calibrated without dispensing fluids to measure ounces, pints, quarts, liters, or gallons to ±0.5% accuracy. Resettable totalizer counts to 1000 gal. Weatherproof.

Note: Not for use with gasoline or fluids with a flash point of 100°F or less.

5 TO 20 GPM

Resettable flowmeters with nonresettable 100,000-gal. totalizer. ±1% accuracy. 24KJ09 and 3KMR1 can be field calibrated.

Note: Do not use for liquids thicker than diesel fuel.

6 TO 40 GPM

3XNL1, 3MMP5, 4RP92, and 5P232 measure flow to 1000 gal. ±2% accuracy. Nonresettable master totalizer: 3XNL1, 3MMP5, and 4RP92 count to 1,000,000 gal., 5P232 counts to 100,000 gal.

Note: Do not use for liquids thicker than diesel fuel.

Fuel Filters

Dayton FILL-RITE

Can be used with gasoline, diesel fuel, ethanol blended gasoline (E1 to E85), and biodiesel (up to B20), except Filter Elements 40M298, 40M299, and 12F734 are only for use with gasoline and diesel fuel, and Fill-Rite models are not for use with aviation fuel.

WARNING: Use only with liquids compatible with pump component materials.

Dayton—Use with Fuel Transfer Pumps 4RP93 and 4FY15 on page 2670.

Fill-Rite—Aluminum-Head Filter 4FY23 is for use with Transfer Pump 4RP93 on page 2670.

Replacement Fuel Filter Canisters and Elements—Screw onto existing filter housings. Buna N gasket.

- Filter down to 10 microns, except 4FY24 is 30 microns

Fuel Nozzles and Hoses

FILL-RITE LIQUIDYNAMICS Dayton

Drum Pump Nozzles—45NC01 to 45NC03 and 45NA99 are suitable for use in dispensing diesel exhaust fluid (DEF). All nozzles have a hang-up hook, except for 45NC01 to 45NC03, 1DLU2, and 1DLU4.

Fuel Nozzles—For use with electric fuel pumps and feature a heavy-duty, die-cast aluminum body.

Auto models have a thermoplastic and protective vinyl grip guard.

Manual 5URH3, 5URH4, and 5URH6 have a hose swivel at the inlet for greater maneuverability and ease of use. 40M288 and 40M289 have a digital meter which can measure fuel in gallons, liters, pints, and quarts.

- Include hang-up hook, except 45NC01 to 45NC03, 1DLU2, and 1DLU4.

Fuel Hose—Antistatic and can be used with gravity feed, electric- or hand-operated pumps to safely transfer flammable media.

- Max. pressure: 50 psi
- Temp. range: -22° to 130°F

Multi-Plane Hose Swivels—Permit the best flow rates and prevent fuel transfer hose from binding, twisting, and kinking during fueling.

3ACA4

Oil Change Pumps and Systems

Dayton

Self-priming and feature 4000 rpm thermally protected motors.

Pumps—Plastic pumps have flexible nitrile impellers and lip seals, to provide fluid transfer with no metal-to-metal contact. ¾" MGHT input/output ports. TEFC motors, except 3ACA4 is ODP.

Systems—Complete with 12VDC pump and suction and discharge tubing. 3ACA8 includes a 4-gal. container. 3ACA7 includes a 3½-gal. container.

Oil Pumps

Dayton FILL-RITE

DAYTON

Pumps have aluminum, cast-iron, nitrile butadiene rubber (NBR), nylon, polypropylene, PVC, steel, and zinc wetted parts for transfer of antifreeze, bulk oils, and hydraulic fluids. Internal bypass valve operates when discharge pressure exceeds bypass valve setting. Pumps can transfer viscous fluids at low temps. Thermally protected motor. Include bung, 8-ft. discharge hose with dispensing nozzle, 34" suction pipe, and 2" bung adapter for mounting pump on drums or tanks.

FILL-RITE

Diesel—An internal bypass valve prevents the motor from stalling when the pump is running and no liquid is being dispensed. With Buna N seals. 4RZJ4 is a portable pump that includes an inlet strainer, hose barbs, hose clamps, battery clips, in-line fuse, and polypropylene nozzle.

Transfer—Diaphragm pumps have polypropylene, stainless steel, and Philcon wetted parts for safe transfer of heavy industrial fluids and chemicals. Dual diaphragms optimize flow rate. Adjustable outlet port for easy installation. ¼-HP permanent magnet motors have thermal overload protection. For nonpotable water applications and particulate fluids to 1⁄10". Include 1" x 12-ft. Buna N hose, 1" manual nozzle, and telescoping suction pipe.

Note: Not for use with gasoline or fluids with a flash point of 100°F or less.

Diesel—An internal bypass valve prevents the motor from stalling when the pump is running and no liquid is being dispensed. With Buna N seals. 4RZJ4 is a portable pump that includes an inlet strainer, hose barbs, hose clamps, battery clips, in-line fuse, and polypropylene nozzle.

REBUILD KIT

Allows pump 4RZJ4 to be quickly and easily rebuilt and repaired in the field. Includes all vanes and seals.

Grease Pump Operation Foot Pedal 15F220

Grease Pumps

WESTWARD Legacy LINCOLN ARO

Hand-operated pumps are used to manually transfer or dispense high-viscosity grease from containers, drums, or self-contained reservoirs. They have few moving parts which makes pumps simple to use and maintain. They don't need to be connected to a compressed air supply making them more portable than air-powered models. Grease pumps are commonly used on farms and construction sites.

Electric Drum Pumps

Motor-driven devices are powered directly from an electrical outlet or by an internal rechargeable battery to draw fluids out of a container. They generate consistent flows at a higher rate than hand drum pumps while dispensing moderate to large amounts of fluid.

Acid, Base, and Solvent—Made with corrosion-resistant materials that withstand a range of acidic and basic chemical concentrations. They are used to dispense and transfer moderate to large volumes of substances and solutions in laboratories and chemical processing plants.

Agricultural—Typically run on DC voltage so they can be powered by farm equipment batteries for use in the field or where an electrical outlet is not available. They're commonly used when dispensing, transferring, and applying large amounts of agricultural chemicals in farming, gardening, and landscaping applications.

Automotive Fluids, Fuel, and Oil—For dispensing and transferring moderate to large volumes of fluids such as diesel fuel, coolant, washer fluid, power steering fluid, transmission fluid, and engine oil in automotive service and fleet maintenance. Pumps operate without generating sparks or may include a grounding kit to prevent the ignition of combustible vapors or liquids and allow use with fuels and other flammable fluids.

Diesel Exhaust Fluid (DEF) Electric Pump Carts—Combine a motor-driven pump and a wheeled frame for mobile dispensing and transferring of large volumes of DEF. Carts are used specifically with DEF to maintain purity when filling the reservoir of a diesel engine's Selective Catalytic Reduction (SCR) system.

Diesel Exhaust Fluid (DEF) Stationary—Used specifically with DEF to maintain purity when filling the reservoir of a diesel engine's Selective Catalytic Reduction (SCR) system. These pumps are certified to ISO standards that regulate the handling, transportation, and storage of DEF. They are used for dispensing and transferring moderate to large volumes of DEF when servicing late model vehicles and SCR-based stationary industrial systems that operate on diesel fuel.

Food and Sanitary—Comply with specific sanitary standards of the food and drug industry to minimize the risk of product contamination. They are commonly used for dispensing and transferring moderate to large volumes of syrups, juices, oils, and soaps in food, beverage, and pharmaceuticals production.

General Purpose—Designed for water transfer and pumping fluids other than food, fuels, or corrosives. They're used to dispense and transfer moderate to large volumes of fluid in general manufacturing and processing applications where a specialized pump isn't needed. **3DYK2 and 3DYK3** are designed specifically for handling flammable liquids and come with a static protection kit and explosionproof motor.

Pneumatic Drum Pumps

Allow more precise flow control than electric drum pumps and generate higher flow rates than hand drum pumps to dispense or transfer moderate to large amounts of fluid. They are powered by a compressed air supply to draw out fluids from a container and are suitable for use in facilities with air compressors or compressed air systems.

Acid, Base, and Solvent—Constructed of corrosion-resistant materials that withstand a range of acidic and basic chemical concentrations. Pumps are used to dispense and transfer moderate to large volumes of substances and solutions in laboratories and chemical processing plants. **3DYK4 and 3DYK5** are designed specifically for handling flammable liquids and come with a static protection kit.

Automotive Fluids, Fuel, and Oil—Suitable for dispensing and transferring moderate to large volumes of fluids such as diesel fuel, coolant, washer fluid, power steering fluid, transmission fluid, and engine oil. Sometimes called an air-operated oil transfer pump or a pneumatic fuel transfer pump, they are commonly used during automotive service and fleet maintenance to drain fuel tanks and remove spent fluids from vehicles and engine-powered machinery.

Diesel Exhaust Fluid (DEF)—For use with DEF to maintain purity when filling the reservoir of a diesel engine's Selective Catalytic Reduction (SCR) system. These pumps are certified to ISO standards that regulate the handling, transportation, and storage of DEF. They're typically used for dispensing and transferring moderate to large volumes of DEF when servicing late model trucks and SUVs as well as SCR-based stationary industrial systems that operate on diesel fuel.

General Purpose—Designed for water transfer and pumping fluids other than food, fuels, or corrosives. They're used to dispense and transfer moderate to large volumes of fluid in general manufacturing and processing applications where a specialized pump is not needed.

Drum Pump Motors

Used to drive the impeller of a drum pump to draw fluids out of a container. Motors typically have a threaded connection on their base for attaching a drum pump tube to form a complete pump assembly. Commonly used to replace or upgrade an existing motor and can be paired with a compatible drum pump tube to allow one motor to be used with different container types or sizes.

General Purpose 1DLK6

General Purpose 5FZV6

Pneumatic 3DYN8

General Purpose Electric—Draw power directly from an electrical outlet or from an internal rechargeable battery to drive the impeller of a pump. They transfer a range of nonflammable fluids in everyday environments and deliver a steady supply of power for more consistent and accurate flow rates than pneumatic motors.

Pneumatic—Operate on a compressed air supply to drive the impeller of a pump and have less risk of ignition than general purpose electric motors so they can be used with a wider range of fluids. Their air-powered design provides precise control of motor torque and operates without straining or overloading an electrical system.

Drum Pump Tubes

Have a rigid intake shaft and an impeller for drawing fluid out of a container. Also called a barrel tube, these tubes attach to a pump motor and fit through the opening of a container to dip into the fluid within. The impeller rotates when driven by a pump motor to move fluid through the shaft and up to the outlet of the pump. Drum pump tubes can replace a damaged tube on an existing drum pump assembly or be paired with a separate motor to create a custom pump assembly. They can also be swapped out to adapt a drum pump for compatibility with different fluids.

Hand Drum Pumps

Allow pumping where there's no access to a power source and ideal for dispensing and transferring small amounts of fluid. These manually powered devices, sometimes called a manual or rotary drum pump, are operated by a crank, lever, or other mechanism to draw fluids out of a container.

General Purpose—General purpose hand drum pumps are designed for water transfer and pumping fluids other than food, fuels, or corrosives. They're used to dispense and transfer small volumes of fluid in general manufacturing and processing applications where a specialized pump isn't needed.

Cleaning—Manually powered devices are operated by a lever or other mechanism to dispense and transfer small volumes of soap, detergent, degreaser, wax, or other cleaning solutions used in janitorial and sanitation. They allow pumping where there's no access to a power source and include an adapter that allows the shaft of the pump to be mounted through the bung hole of a drum or other container. Pumps are made of materials that withstand the potentially corrosive effects of cleaning products.

Food and Sanitary—Comply with specific sanitary standards of the food and drug industry to minimize the risk of product contamination. Also called food grade drum pumps, they allow pumping where there's no access to a power source. Pumps are typically used to dispense and transfer small volumes of syrups, juices, oils, and soaps in food, beverage, and pharmaceuticals production.

Diesel Exhaust Fluid (DEF)—Designed for use with Diesel Exhaust Fluid (DEF) to maintain purity when filling the reservoir of a diesel engine's Selective Catalytic Reduction (SCR) system. They can draw small volumes of DEF out of a container and allow pumping where there's no access to a power source. For use when servicing late model trucks and SUVs as well as SCR-based stationary industrial systems that operate on diesel fuel.

Automotive Fluids, Fuel & Oil—Manually operated by a crank, lever, or other mechanism they allow pumping where there's no access to a power source and can dispense and transfer small volumes of fluids such as diesel fuel, coolant, washer fluid, power steering fluid, transmission fluid, and engine oil. Pumps and are commonly used during automotive service and fleet maintenance to drain fuel tanks and remove spent fluids from vehicles and engine-powered machinery.

Acid, Base, and Solvent—Operated by a lever or other mechanism to dispense and transfer small volumes of substances and solutions in laboratories and chemical processing plants. They allow fluid transfer where there's no access to a power source. Pumps have corrosion-resistant construction that withstands a range of acidic and basic chemical concentrations.

Digital Hydronic Manometers

Meters help balance hydronic heating and cooling systems and check pump performance.

5LB25—Meter displays differential, high-side, and low-side pressures simultaneously, without having to change hose connections or instrument valve settings. Features a backlit display. Includes a carrying case, hose set, batteries, and an AC adapter.

5LB24—Has all the same features as No. 5LB25, plus displays volumetric flow when a Cv (Kv) factor is programmed. Up to 100 Cv (Kv) factors can be entered. Meter also calculates brake power, heat flow, Cv (Kv) factors, and impeller sizing. Stores up to 1000 data points for later recall or download to a PC using the USB interface. Also includes interface cable and software.

48GC43 to 48GC48—Feature a field-adjustable damping function that lets you choose the level of display averaging rate corresponding to the fluctuation level. Models also have a hold feature, visual and audible overpressure alarms, memory function that stores up to 40 readings, and a backlight that provides auxiliary illumination for low-light conditions.

Vertical-Mount Liquid Level Switches

These float switches mount in the top and/or bottom of a tank or vessel to actuate High/Low alarms, control relays, PLC's, or other low power devices. Encapsulated, magnetic dry contact reed switches can deliver more than 5 million switching cycles at rated electrical loads.

On select models, operation can be changed to be Normally Closed or Normally Open (dry, empty tank conditions) by removing and flipping the floats.

During installation, Adjustable Vertical models can be set lower by up to 2", or higher by up to 69".

Tethered-Mount Liquid Level Switches

Switches are designed to provide inexpensive, efficient, reliable level detection in large open vessels, water tanks, reservoirs, sumps, and ponds. A microswitch inside a molded polypropylene float detects fluid level change and generates a Start/Stop, Open/Close, or alarm actuation signal. Paddle-shape 2ZY80, oval-shape 11K185, and bulb-shape 11K187 and 11K188 have a contact rating of 16A at 250V. 6½-ft. cable, except 11K188 cable is 32½ ft. long.

Side-Mount Liquid Level Switches

Madison Sensing Solutions since 1959

These encapsulated, dry contact reed switches can deliver more than 5 million switching cycles at rated electrical loads, and are suitable for controlling relays, PLC's, or other low power devices. You can set switches for High or Low alarm points, or Pump Up to Pump Down operation when mounted into the side of a vessel or tank. Also can be mounted outside of a vessel or tank using an NPT coupling, or from the inside using a bulkhead fitting (UNC/UNF) and gasket. Models with dual NPT threads are indicated in the table with the mounting thread first (outside mount). Most switches can be set Normally Open or Normally Closed by rotating them 180°.

Leak Detection and Alarm/Shutoff Systems

Madison Sensing Solutions since 1959

- Temp. range: 14° to 112°F

Initiate an audio alarm and automatically shut off water flow when leak is detected, except 11K230 and 11K231 have an audio alarm only. Excellent for dwellings that may be unoccupied for days or weeks. 120VAC, except 11K230 is 9VDC. All have a 12-ft. power cord and an 8-ft. sensor cord.

11K221 is for use with water tanks and water heater tanks. 11K230 and 11K231 are for use with beakers, dishwashers, frozen pipes, leaky drains, sinks, sump pumps, and tabletop containers.

FLOWLINE

Level Controllers

12U422

- Temp. range: -40° to 149°F, except 12U422 is -40° to 158°F

Use with an ultrasonic or pressure level transmitter to provide the liquid level in a tank or sump container. Can provide local relay control, or transmit output signal to another device or controller. Easy-to-read display is simple to configure with push-button display module. Nonvolatile memory. LED display. ⅛ DIN panel mount, except 12U422 is 35mm DIN rail. Polycarbonate enclosure, except 12U422 is polypropylene. NEMA 4X (IP65) rated faceplate, except 12U422. Models include 4-20mA repeater, except 12U424.

5MXP5

33Z920

Flow Sensors

+GF+

5MXP5 and 5MXP6 have the widest range of flow rate and volume measurement in plastic pipes, from 1 gpm in ½" pipe to 3,100 gpm in 8" pipe. Open-cell rotor construction ensures linear, repeatable output up to 20 fps, with linearity of ±1% of full scale. 25-ft. cable is standard; transmits up to 200 ft. without amplification. Rated for 220°F at 25 psi, 70°F at 200 psi.

5MXP7 and 5MXP8 are great for low-flow or high electronic noise applications. Insertion-type paddlewheel sensor generates an open-collector (Hall effect) pulse output proportional to flow rate as low as 0.3 fps. Designed for systems ranging in size from ½" to 8", with max. velocity of 20 fps. Feature ±1% full-range linearity and ±0.5% repeatability.

Paddlewheel Repair Kits 33Z920 and 33Z921 include paddlewheel rotor, pin, and 2 O-rings.

Description	For Pipe Size	Flow Range	Std.	Mfr. Model	Item No.
Paddlewheel	2 in	0.95 to 793 gpm	CE, CUL, ROHS, UL	P51530-P0	**5MXP5**
		0.28 to 793 gpm		3-2536-P0	**5MXP7**
		62 to 1247 gpm		P51530-P1	**5MXP6**
	5 to 8 in	18 to 3118 gpm		3-2536-P1	**5MXP8**

Description	Type	Mfr. Model	Item No.
Paddlewheel Repair Kit	Red Cap	P51550-4	**33Z920**
	Blue Cap	3-2536.321-1	**33Z921**

Description	Max. Pressure	Mfr. Model	Item No.
Electronic Flowmeter Plug	180 psi @ 68°F	P31536	**5MXP9**

Clamp On Saddle
5MXU2

+GF+
Insertion Tees and 2-Pc. Clamp On Saddles

- Max. temp.: 140°F
- Schedule 80
- PVC construction

Insertion Tees feature a slip connection. Clamp On Saddles are 2-pc. and have a max. pressure of 180 psi and EPDM gasket material.

Pipe Size - Pipe	Fitting Length	Item No.
Insertion Tee		
½ in	14 in	**5MXT3**
¾ in	14 in	**5MXT4**
1 in	17 in	**5MXT5**
1½ in	24 in	**5MXT7**
2 in	24 in	**5MXT8**
3 in	24 in	**5MXU0**

Pipe Size - Pipe	Fitting Length	Item No.
Clamp On Saddles		
2 in	4 in	**5MXU2**
3 in	5 in	**5MXU4**
4 in	5 in	**5MXU5**
